4089. AAlog ver.3.0 build 1115

Yahoo group: dxsoft
Date: 2009-01-09 07:43:11 UTC
From: Alexander Anipkin
Topic: 4089 Message: 4089

Dear dxsoft users,

I just upload pre-release version of AALog ver.3.0 on website.
You can download it from
www.dxsoft.com/aal3.zip

Install it into separate folder. You can use AALog 3 and AAlog 2.47
in the same time. They have differeint databases.
To copy data from AAlog 2.47 to 3.0 use Cpy2to3.exe

Best regards,
Alexander mailto:aia@...

Ref: Johnnytrans:

I have been using cwtype for quite some time now and it is fantastic. Did
you build the small transistor interface. I only used the top part using one
transistor. After installing the program, go to setup and select setup, go to
select comport and choose via windows api. You might also try to change the
com port to com 2 instead of com 1.
I put a small capacitor across the key jack to prevent feed back into the
computer. still have a problem on 20 meters but if cut back on the power it
works fine.

4093. Re: New Computer Switch

Yahoo group: dxsoft
Date: 2009-01-10 10:47:35 UTC
From: Jim
Topic: 4086 Message: 4093

Alexander, I appreciate your reply, but I am still having issues.

The registry key is in the same folder that the program established upon download, just as you said. Also in that folder, I put my old log files- in both db and adi form.

It will load and merge just fine- however, after I am finished and close the program, when I decide to reopen the program from the desktop icon, I am back to where I was before- with what it thinks is an unregistered copy, and my log files are not in there either.

Any further help?

Thanks,
Jim

AAlog.key must be placed near aalog2.exe. Setup program put AAlog2.exe
in the c:\program files\AAlog2\ folder by default. If you do not
change this path then you need put aalog.key into this folder.

Best regards,
Alexander mailto:aia@...

4095. AALog 3.0 build 1116 available

Yahoo group: dxsoft
Date: 2009-01-10 18:16:48 UTC
From: Alexander Anipkin
Topic: 4095 Message: 4095

Dear dxsoft users,

I just upload new build of aalog into websites

+ DX notebook added
- Award manager statistic for deleted references fixed
- some fixes in ADIF expor? procedure

http://www.dxsoft.com/aal3.zip - full package
http://www.dxsoft.com/aal3-upd.zip - update from build 1115 (Only exe file and bat file for database convertation)

Best regards,
Alexander mailto:aia@...

4098. CwType 1.77 beta is published

Yahoo group: dxsoft
Date: 2009-01-19 09:51:15 UTC
From: Sergei Podstrigailo
Topic: 4098 Message: 4098

Hello All,

I just have uploaded CwType 1.77 beta to the main site and mirror:

http://www.dxsoft.com/cwtypeb.zip
http://www.hamport.com/cwtypeb.zip

--
Best regards,
Sergei

==========

CwType Versions History

V1.77
Paddle can be connected to COM-port (and USB/COM converter) now.
V1.75
CwType can work together with AALog 3.0 now.
V1.70
CwType can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
V1.60
A bug was fixed - PTT didn't work in "manipulation via OmniRig" mode
during sending from AALog or AAtest.
The ~[ab] macrosequence was made - to clear the input window and
switch TX, beacon and "pause" off.
V1.57
LPT-ports with non-standard addresses (for examples, LPT at PCI-cards) are
supported now.
Some minor bugs were fixed.
[...]

Yes, DXSOFTIO driver don't work at 64-bit system.

But CwType should work if you don't use LPT-port and internal speaker...

Hi T3TI,You should look into Winlink2000. http://www.winlink.org/ In order to use it you will need either a 2 meter or HF radio, judging on your location a HF radio, and a TNC along with a computer. Note the ones in the Kenwood D700s aren't sufficient for Winlink use. Kamtronics makes a nice model which I am currently suing in my Winlink setup. I would recommend one running Win XP i'ver heard of issues with Vista. The service is free and it has worked well for me, but I've only used it with 2 meter radios locally.
Hope this helps,
Ty

Tibou;
Yes, we use winlink 2000 in the US. There are other products that the
ARRL may be able to help with. What Island are you on? Where is it
located? Go to www.winlink.org for more information.

I have not used it recently, but I think you will enjoy. It is universal
for hams.

4111. problem

Yahoo group: dxsoft
Date: 2009-01-31 00:29:41 UTC
From: özer öksüz
Topic: 2696 Message: 4111

Hello

I am a registered AAlog user.
I am using AAlog V 2.47 and I was happy.
I have a problem today:When I try to log a new QSO, problems begin:Key violation...
If I do not want a new QSO record,no problem.If I want to record a new QSO,all requests are opens a dialog box:Key violation.
After restart PC,If I don't request a new QSO record,all functions works well.But after any new QSO record request,all requests open a key violation window.

Why?

4113. CwType 1.78 beta is published

Yahoo group: dxsoft
Date: 2009-02-02 15:51:43 UTC
From: Sergei Podstrigailo
Topic: 4113 Message: 4113

Hello All,

I just have uploaded CwType 1.78 beta to the main site and mirror:

http://www.dxsoft.com/cwtypeb.zip
http://www.hamport.com/cwtypeb.zip

--
Best regards,
Sergei

==========
CwType Versions History

V1.78
Some problems of co-operating with AALog 3.0 were fixed.
An option "Setup / Interface / MOX & Paddle / Paddle with Dash/Dot memory" was made.
So paddle can be used in three modes now:
- Ordinary mode;
- Iambic mode with Dash/Dot memory;
- Iambic mode without Dash/Dot memory.
V1.77
Paddle can be connected to COM-port (and USB/COM converter) now.
V1.75
CwType can work together with AALog 3.0 now.
V1.70
CwType can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
V1.60
A bug was fixed - PTT didn't work in "manipulation via OmniRig" mode
during sending from AALog or AAtest.
The ~[ab] macrosequence was made - to clear the input window and
switch TX, beacon and "pause" off.
V1.57
LPT-ports with non-standard addresses (for examples, LPT at PCI-cards) are
supported now.
Some minor bugs were fixed.
[...]

belleville62220

Fri Feb 6, 2009 9:54 pm (PST)

Question: will AALog 2.47 convert .adi files to .TQ8 so it can be used for LOTW?

AAlog cannot convert to .tq8. The LOTW software takes an AAlog .adi file and performs the conversion.

4118. SeaTTY 2.21 beta is released

Yahoo group: dxsoft
Date: 2009-02-13 13:14:16 UTC
From: Sergei Podstrigailo
Topic: 4118 Message: 4118

Hello All,

I just have uploded SeaTTY 2.21 to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

--
Best regards,
Sergei

==========

SeaTTY versions history

V2.21
Options for tuning auto start / auto stop parameters of FAX mode were made.
See "Interface/FAX" page.
V2.20
Message filename shows time of message start, not time of message end now.
"Setup / Other / EOM timeout in SAME" option was made.
A bug was fixed - a message with station ID in filename couldn't be really deleted by
"Delete" command.
"Auto start" and "Auto stop" procedures were slightly optimized in HF-FAX mode.
V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.
V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
V1.80
GMDSS DSC (HF and VHF) messages decoding was made.
V1.76
Station ID's of RTTY and NAVTEX messages are included in message filenames
and are shown in the message tree now.
V1.75
The "Setup" menu was rewritten.
Station ID filter was made. This filter allow to select messages which
should be automatically saved in NAVTEX and RTTY modes. Station ID is
four letters after "ZCZC " sequence.

4119. Next step for SeaTTY

Yahoo group: dxsoft
Date: 2009-02-17 02:50:44 UTC
From: qp2trz
Topic: 4119 Message: 4119

Sergei,

Just when I thought there weren't too many next steps left for the
SAME settings, another just struck my mind.
Consider turning SeaTTY into a fully functional weatheradio.
Adding FIPS/CLC sniffing capabilities and an audible alert would just
about do it.
Perhaps a 'record on specific FIPS/CLC only' option would help too.
How about adding script that would unmute the speaker output of the
computer when a specific FIPS/CLC was received and then close it at
the EOM, or a user specified time.
Basically the same functionality as a weatheradio.
That to me would add to its marketability. Food for thought.

Regards,

Joseph

Yahoo group: dxsoft
Date: 2009-02-17 12:10:08 UTC
From: Maurizio
Topic: 4119 Message: 4120

Another very welcome feature would be a programmed schedule with CAT control; so I could schedule NAVTEXT reception on 518 Khz, 490 Khz ...and FAX on other frequencies and times...

What do you think about it ?

I use a Perseus SDR in a remote location and this feature will be very nice.

Thanks.

Maurizio IW2GOB

A setting where the user could input specific FIPS/CLC codes and if those specific codes were decoded an alarm or something would be passed through to the PC's speaker.
Exactly how a weatheradio works in North America.
I hope that helps...keep asking if it doesn't.

From: Sholto Fisher
Topic: 4119 Message: 4128

Hi Sergei,

I think one of the reasons why CwGet wasn't popular on Windows Mobile
was because PocketDigi is available and also has a good CW decoder.
Maybe not quite as good as CwGet but PocketDigi is freeware.

The "missing things" from PocketDigi however are:

1. SITOR/NAVTEX decoder
2. WX FAX decoder
3. GMDSS

All of these are in SeaTTY and I think if SeaTTY was written for Windows
Mobile then you might make many sales because people take their Windows
Mobile devices with them when they sail.

Just my opinion.

From: mike97mike
Topic: 4119 Message: 4129

My experience is with PocketDigi and PSK31 transmit/recieve. One can use the cellphone/PDA microphone for input. Alternatively, Windows Mobile 6.x support the more robust BT 2.1 which allows the use of microphone/headset for BT input/output to cellphone/PDAs and not just for dialing, but general audio management. So, cool.

We want SeaTTY as a mobile app. The future is mobile app.s. Look at the effort Microsoft is putting into it RIGHT NOW!. I will make a predication: either Sergei does it with his EXCELLENT code, or someone else will....

4135. CwGet 1.80 is released

Yahoo group: dxsoft
Date: 2009-02-22 11:28:32 UTC
From: Sergei Podstrigailo
Topic: 4135 Message: 4135

Hello All,

I just have uploaded CwGet 1.80 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

--
Best regards,
Sergei

==========

CwGet Versions History

V1.80
Options "Setup/Put Time Marks to a Capture File" and
"Setup/Use UTC Time" were made.
V1.70
The "Setup/Multi-Channel Decoder" command opens additional Multi-RX Window.
CwGet decodes up to five strongest signals in about 1600 Hz bandwidth and
shows them in this window. To reduce amount of "garbage" in this window an squelch is used.
Squelch threshold is shown by horizontal line in the Spectrogram window.
This threshold can be changed by mouse with "Shift" key pressed.
The "Setup/Enable Squelch in Main RX Window" options enables squelch in
main RX window also.
V1.65
CwGet can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
Some minor bugs were fixed.
V1.61
Values 10:1 and 20:1 was added into "Zoom" menu.
Method of detector threshold automatic calculation was
fully rewritten.
In "Auto Threshold" mode user can define minimal value of detector
threshold by click at oscillogram window. Two horizontal lines
show current detector threshold value and minimal threshold in
this mode.
V1.60
Minor bugs were fixed and some minor improvements were made.
V1.55
A text in the receiving window is not truncated automatically now.

The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram now.
"Speed lock" button state and locked speed are saved by "Setup->Save Setup" command
and are restored on software startup.
A bug was fixed - sound enabled by "Setup->Sound Output" option was wrong during
decoding from wave-file.
V1.50
The "Setup->Tune RIG by->Show Omni-Rig Setup" command activates
Omni-Rig setup dialog.
The "Setup->Spectrogram Colors Setup" and "Setup->Oscillogram Colors Setup"
menus can change colors of all elements of spectrogram or oscillogram
window now.

4140. Re: QSL service problem

Yahoo group: dxsoft
Date: 2009-03-17 15:58:17 UTC
From: Paul Beringer
Topic: 4137 Message: 4140

I haven't heard anything back on my previous post below. So I upgraded anyway and found that all of the "in queue" contacts came thru fine. Now in the matter of qsl labels, I wasn't satisfied with the Avery 5160 label default file, since the formatting seems to be specific to the A4 paper size. So I fiddled around with the labelmaker program included in version 3 and got it just right for US letter size. The printing includes a "Via:" field and the Global QSL message at the bottom of the label. I've been asked in the past for a 5160 label by a few other US users of AAlog 2.XX. So if anyone wants the file, just e-mail me at ng7z at arrl dot net. It produces perfectly aligned labels, 30 per sheet.
One other thing I had trouble with in version 3 is the callsign lookup function using the Buckmaster database. In version 2.xx it worked fine using the path C:Ham0. I chose this path in version 3 and get an error message that file is not found. Is there a fix for this?
73 Paul NG7Z
BTW, I really like the new layouts in version 3. I'm looking forward to the integration of LOTW and how it works in version 3.

try
c:\HAM0\

PB> BTW, I really like the new layouts in version 3. I'm looking
PB> forward to the integration of LOTW and how it works in version 3.
What version you have?
AALog 3.0 can import LoTW report and mark As CFM via LoTW contacts.
Alsso it display this info in the all awards stat windows

From: Paul Beringer
Topic: 4143 Message: 4143

I just noticed that the time in the logging window is local PST. In version 2.47, it was an easy matter changing the GMT offset but I can't find it anywhere in version 3. So for now, I've set my computer to GMT. What am I missing?

You didn't set your time zone in Windows clock.

Just set your local time _and_ your time zone.

4145. Restricting previous qsos shown

Yahoo group: dxsoft
Date: 2009-03-22 14:44:54 UTC
From: Paul Beringer
Topic: 4145 Message: 4145

I'm using version 3.0.0.1119. I would like to know if there is a way to limit the number of previous qso's shown in the "previous qso's window"? It could be by number or by date. My preference would be restriction by date. It would be handy to make this change on the fly within the logging window. During state qso parties, I need to see if I've worked a station before to avoid dupes. I'm an active contester and many callsigns appear 50 or more times in the log so the last ones are at the bottom. I have to quickly scroll down the list to see the last ones.

Thanks

Paul NG7Z

4152. AAtest

Yahoo group: dxsoft
Date: 2009-03-23 19:47:23 UTC
From: Paul Beringer
Topic: 4152 Message: 4152

Ok Alex. I've got aatest and cwtype installed and tested with a contest in the list. Now, how do I make a custom contest? For example, this past weekend I did three contests. The QRP Homebrewer contest was one of them. The exchange was RST, SPC and power out. It would be really slick if we could make our own contests. And it wouldn't be absolutely necessary that AAtest scores it either. You can import a Cabrillo file into Excel and do the necessary manipulations to score it.

Just some thoughts

73 Paul NG7Z

BTW, am I the only one having these questions on the reflector? I don't see many other guys asking questions about AAlog 3. Or AAtest. Am I alone in here?

From: Paul Beringer
Topic: 4152 Message: 4154

Well, I could be rude and say, "See the web site". But I won't. Aatest is the contest module that integrates with AAlog, CWtype is the morse code application that also integrates with AAtest and AAlog. The three, working together, provide a platform for rapid fire qso's in a contesting environment. CWtype can be used alone for casual cw rag chewing and/or a lazy man's way of sending code. If you're really lazy, and the other operator has an excellent fist, you can use CWget to decode cw. CWget is free but CWget isn't. Now, go to www.dxsoft.com and read all about it.
Cheers,
Paul NG7Z

Hello Paul,

Monday, March 23, 2009 , you wrote to me:

Just finish somt modification for aatest and upload it to website.
New version has 4 new contests:
Custom contest
Custom Contest (digital)
Custom contest VHF
Custom Contest VHF (digital)

you can make some customization for this contest (tours length and
kind of exchange)
For your example you need add in the Config | Station menu in the "User
exchange" field your SPC and Pwr. If in the test stations use real rst
reports then go to Config | Properties and select Display RST fields
option in General tab

Alex,
Well, this is a good start. However, in the received exchange field, I can't enter an exchange which consists of more than two letters or numbers. If I have an exchange from worked station like "TN 3498 5w" I cannot enter it in the field. After I enter "TN" and then space, the cursor jumps back to the callsign field.
I tried the NAQP contest which calls for "name spc" exchange. I entered "tom" followed by space and then "va". The cursor jumped to the callsign field when I pressed space and then put the "va" after the last character of the callsign. This wouldn't work very well in the NAQP. Am I missing something? I checked "config-properties" and "config-contest" and other menus but found nowhere to allow multiple entries in the received field.

"Space" key is used to switch between call and number fields.

So you can not enter space in number field at all. If you really need a separator in
received number, use another symbol, not space.

From: Bob Purves
Topic: 4166 Message: 4166

Hi

I am able to run AAlog3 on Vista without any apparent
problems but the addons will not run i.e. Bandmaster, DX Atlas and Hamport.
Is this a security function which will be solved by installing in a new
directory rather than as a program file or are they not compatible with
Vista. Everything works well on XP and I think it is a very good logging
programme but I would like to upgrade my PC and want to make sure everything
works before I change over. I hope someone can help me

4168. Re: [dxsoft] aalog 3.0

Yahoo group: dxsoft
Date: 2009-04-07 03:58:38 UTC
From: Kevin Hoshaw - KE0H
Topic: 4163 Message: 4168

I'm running Vista64 on a Dell Inspiron 1318 notebook with 4g of ram and 320g hard drive.

I tried several times to load AAlog3 with interesting results. I discovered from other sources that I needed to change the default destination when installing. I have it loaded but it still comes up with an error regarding the Borland portion. It tells me there is not enough room to install it but I told it to install anyway. I did not install any programs into the program file directory. They are all into root directory in their own subdirectory.
C:\AALOG3
C:\CWGET
C:\CWtype
C:\Bandmaster
C:\DxAtlas
OmniRig does not give me the chance to set a directory. It is in C:\ProgramFiles (86)\AFLEET\Omnirig.

Here's what does not work on my machine:

1 - Convert log from 2 to 3 will not run. I have managed to get my logs into it via export/importing of adif file.

2 - New QSO will not bring anything in from CW type. Cwtype and Cwget both load and work but have a message saying - CWGET.INI file was not found in working directory C:\CWGET Working directory was changed to default directory C:\ProgramData\CwGet.

New QSO will pull in info from Bandmaster and omnirig.

3 - Go to date will not edit month or day. I can edit year but then it errs out as invalid date.

4 - Quick search appears to do nothing.

5 - The arrows next to date and time do nothing. I assume they're filters to sort ascending/descending?

6 - Dx notebook gives an error of sql error 204.

7 - RUN CWget and CWtype BOTH bring up CWget.

Keep in mind I'm not the most computer literate. i'm still trying to figure it all out.

I'm still working on finding ways around the isses.

Thank you for your time.

Kevin

4169. AALog 3.0 and TRUETTY compatibility problem

Yahoo group: dxsoft
Date: 2009-04-09 18:26:14 UTC
From: oceanbiz01
Topic: 4169 Message: 4169

When I use TrueTTY with AALog 2.47, I can transfer info from TrueTTY to AALog 2.47 such as name, callsign, Grid, QTH etc. by just mouse click on the info and click on the Title like Name, or callsign etc.

This does not work using AALOg 3.0

Can someone please tell me what I am doing wrong?

Also, In AALog 3.0, In awards, I cannot search on DXCC Prefix, this option is not in the list of search criteria.
Can this be included?

Dan K3ZXL

4170. AALOG3 and Bandmaster and TRUETTY compatibility

Check "Config - Options - External programs - Use TrueTTY for digital modes"

Under "Configure" button an option "When relevant mode is selected" probably is best.

4172. AAlog 3.0 QRZ database

Yahoo group: dxsoft
Date: 2009-04-10 19:20:37 UTC
From: Paul Beringer
Topic: 4172 Message: 4172

I just installed the QRZ database by downloading it from their site. After installation, I told AAlog 3.0 to find it in the "C:\Program Files\QRZ Ham Radio\callbk" folder. Nothing comes up when entering a valid callsign in the "new QSO" field after hitting Enter. So I tried the "C:Program Files\QRZ Ham Radio" folder. Still nothing. The files in the "....\callbk" folder are several .dat and .idx files. and a .qrz file. Isn't AAlog 3.0 supposed to work with this database?

What kind of tribles you have?

o> Some of my questions are about the prefix list. If you have the
o> available time to interact with me, you could email me directly at
o> dan-schaaf@...
AAlog 3.0 use prefix list from DXAtlas with some modifications. AAlog
2.47 has another format.

Best regards,
Alexander mailto:aia@...

4183. Enable external Mic on PC?

Yahoo group: dxsoft
Date: 2009-04-21 07:04:40 UTC
From: Bosen Zhao
Topic: 4183 Message: 4183

Hi there,
I'm using CallTTY on my laptop. Recently I found the build-in microphone of my laptop seems damaged although it still captures the sound but the quality is bad. So I want to try an external microphone. But when I plug in the external Mic in the laptop, it's still the build-in mic that picks up the sound rather than the external mic.
Any way to enable the external mic and disable the build-in mic?

Thanks

Bosen

Have been able to display upper panel. Vertical red line automatically goes to strongest signal.
Can see the waveform in the bottom panel. Have adjusted the horizontal red line to 50% of window.
Can hear the code loud via my PC speakers, but there is no translation occurring in the window.

When I do get any translation it is all garbled and nonsensical.

What am I doing wrong?

How does the code sound to your ear. CW Get is excellent with keyboard generated code and also with paddle-generated code. It is less than happy with bugs and sloppy fists.

Suggestion: Try sending code and see if it displays properly on the screen. This is one of the best uses for CW Get: monitoring the quality of your own fist.

4192. Importing Text Logs into AALog 3.0

Yahoo group: dxsoft
Date: 2009-04-23 02:44:59 UTC
From: oceanbiz01
Topic: 4192 Message: 4192

Paul

Good Luck with TrueTTY in 3.0

I have had nothing but headaches trying to get TrueTTY to work with 3.0

When TrueTTY is invoked, you can click on a spot in Bandmaster and the call sign goes into TrueTTY but if you click on a call sign in the TrueTTY receive window, the call sign does not go into the New QSO window.

And, when I shut down 3.0, it does not turn off Bandmaster and Omni Rig. It hangs up the computer and I have to go into Task manager and remove the Omnirig and Bandmaster exe's manually.

Maybe you can make an ADIF file in Digipan and the import the ADIF into 3.0

I have also lost half of my 60 meter QSOs converting 2 to 3. I will have to create a separate log in 2.47, copy the slected 60 meter Qs into the new log, then try again to Convert 2 to 3 on the 2.47 60 meter log, then merge it into my 3.0 Main Log.

Neil
cwget is a great program and I use it for a crutch because of my stupid short term memory loss, and I can copy every character as it is sent and can tell you this that it will not copy a bad fist, especially hams using bugs that sent dots fast and dashes slooow. after you brain is fine tuned to the code it will copy some bad fists but cwget will not!!!
So my advise is to not use cwget until you have learned the code at least 13 WPM, and forger all about dots and dashes LEARN THE SOUND of each caracter. copy code practice from W1AW it will be perfect code. and get on the air at what ever speed you can copy and do not sent faster than you can send!!! call cq at your comfortable speed. when I was a Novice I worked the world at 5 to 7 WPM and had a ball.
GUD luck
ED K8OT
PS all you bug operators go back to the top and read again

Subject: [dxsoft] Re: CWGet problem

How does the code sound to your ear. CW Get is excellent with keyboard generated code and also with paddle-generated code. It is less than happy with bugs and sloppy fists.

Suggestion: Try sending code and see if it displays properly on the screen. This is one of the best uses for CW Get: monitoring the quality of your own fist.

You could just convert TXT to ADIF, using any txt2adif converter, and then import it with AALog.

There is a freeware sw here:
http://sp7dqr.waw.pl/eng/convert_en.html

Last week I posted a note about importing a text file into ver 3. Version 2.47 had this feature and I really need to get this text file into my version 3 log. It's a Digipan export file. That's what I use for PSK modes. And I haven't started to use True tty yet but I will soon. Until then, I need to get this log into AAlog. BTW, why was that text import feature removed? It was very handy.

4200. AAlog 3.0 awards

Yahoo group: dxsoft
Date: 2009-04-24 01:45:23 UTC
From: Paul Beringer
Topic: 4200 Message: 4200

In the "Config-Awards list" there is an option for "New" awards. I looked at several "registered" awards by clicking on the "Edit" option. I noticed that the "statistic field" has a drop down menu with various fields available for choosing. Also in that list is a choice called "User awards". I'm wondering if one can generate your own award based on certain criteria that you choose. For instance, suppose I wanted to keep track of the Fists numbers I collect. Fists has a lot of awards available and trying to keep track of them via the notes field can be a lot of work. I also keep track of SKCC numbers. Is that "user awards" field supposed to be a visible field in the "New QSO" dialog box? And is it possible to generate new awards based on user criteria?

Also, when is an English language help file going to be posted? I probably wouldn't be asking so many questions if it was available.
Thanks
Paul NG7Z

Hello Paul,

Friday, April 24, 2009 , you wrote to me:

There are two way to create FISTS award.
1. Create list using User Awards field. Just add members numbers and
Name or Call as Description. In this case you will need to add
infomation manually to Users awards section for QSO.
2. Create list using Call field. As the key use Call but in Ref. Alias
use member number. Description Call or Name As you wish. In this case
AAlog will determine itself that this station is FISTS member.

As Example you can look to Russian Robinson Award

PB> In the "Config-Awards list" there is an option for "New"

4202. Trouble with CWGet

Yahoo group: dxsoft
Date: 2009-04-26 21:48:34 UTC
From: nf.martin@att.net
Topic: 4202 Message: 4202

Well, I've had this software almost a week.
I have yet to get the software to actually decode a CW signal, even those that are very loud.

I've followed all of the suggestions:
Placed the red line in the lower panel about 50% of the height of the green signal.
Set the software to Auto GTM.

Is there somewhere that I can get a complete description on all of the setup parameters.
The info provided in the software Help, is anything but.

I'm either really stupid or this was a waste of my money.

Regards

From: Palle A. Andersen
Topic: 4202 Message: 4204

Hello Martin!

I do not understand your problem with the CWGET-program.
I have used the program for the last 5 years, and I think it is the best CW-decoding program on the marked, and it is free to use, but 35 $ registered.

When starting the program, and connected to a receiver, as showed in the help file, you shout be able to see some wave-movement in the window under the bottom-panel.

If you here a CW-station in the loudspeaker, then you can see a "pic" in the wave-moment window. Now hit the button "GoToMax", and you would see the RED vertical pin pointing on that pic in the wave-movement window.

In the bottom of the program-window, you would see the wave-form of signs, being decoded with HI ☐ LOW forms.
Here you also have a colored horizontal line pointing on the level of signal-strings.
Now hit the button "AutuThr" ☐ the first in the button-panel ☐ and now the program is starting to write letters. You can also move this horizontal line with the mouse ☐ just point and click.

Be aware .
Until you fully understand how the program is working, you must experiment with the signal strength from receiver to your PC, and I recommend you to have a potentiometer (1 K Ohm) for regulation. It is possible to KILL your sound-card, by overload the input to the soundcard.

If you are not a CW-operator, you must understand, that HAM-radio-language in CW would bee lots of codes, f. ex. The Q-codes and lots of shorted messages, and NOT CLEAR language.

Mush like: " TNX QSO DR OM ES TU CALL ☐ WE WKD B4 ☐ HPE CU AGN ☐ MY QSO VIA BURO ☐ ALL THE BEST ES VY 73 DE OZ6YM".
This means: " Thanks for the chat (or connection) and thank you for calling ☐ we have been working before ☐ Hope to see you again - my QSL-card (a posted card) goes via (QSL)bureau ☐ All the best
and my very best greetings from OZ6YM"

Use the CWGET program after you have learn the basic CW-decoding by listening, to get the most out of it.
CW is for me the real HAM-radio-communication, and I LOVE IT!!!!

If this is NOT working for you, I think that you have a major problem, but tell me about it!

NOTE: Itryet to write you directly, but gote this message:

Go to the webSDR website, choose a CW signal (usually around 7050 kHz),
 fire up cwget and check whether it will decode the sigs. It is that easy..

WebSDR: http://websdr.ewi.utwente.nl:8901/

Make sure CWGet is receiving theaudio ok. In case it is not, check the
sound card settings (choose "mixer" input).

Hi Neil,
There's something strange going on here, CWG is such a simple, and very good, prog to use.
From your posts I see you have the 'traces' on both the upper and lower panels so your soundcard input is OK and being passed to CWG.

Main window - Setup - select the following :-
English Charset
Logorithmic Spectrogram
Logorithmic Oscillogram

Input/Output sound card = Default

Save settings

Tune to about 14012kHz (should be plenty of sigs there).
Upper panel.
Turn off Auto GTM and select a peak manually with left mouse button, preferably a fairly slow CW one. You should now easily be able to see the 'heard' sig peaks appear on the Lower panel with only a very short delay.

Lower panel.
Set the red line at about 50% OF THE CW SIGNAL PEAKS, but ABOVE the continuous trace of the background noise.

You should now be decoding.

If this doesn't work then I'm totally confounded.

Cheers
Mike L

Andy:

Thanks for your response. I followed your suggestions.
I can hear the CW through my PC speakers.
But ... the software does not generate any words, lots of letters & spaces but - no words.
The same as I get when I tune a CW signal on my transceiver.

So now I really don't know what is wrong.

Regards

Neil, NM9T

PS. I know that my PC soundcard works OK.
I know that my connection from my rig to PC is
OK because I use it for PSK31 communications.

Well I followed your suggestions.
I put a 1k attenuator in the input line to my PC.
Then I located a strong CW signal and opened CWGet.
Got a CW-station in the loudspeaker,
then I can see a "pic" in the wave-moment window.
Then I hit the button "GoToMax", and
Saw the RED vertical pin pointing on that pic in the wave-movement window.

In the bottom of the program-window, I saw the wave-form of signs, being decoded with HI - LOW forms.
Here I had a colored horizontal line pointing on the level of signal-strings.
I hit the button "AutuThr" and now the program started to write letters.

Here is a sample of the letters in the RX window, see above.
By the way I already purchased the software based on eHam reviews.
I know that the connection between rig and PC is OK
I know that the soundcard works OK.
Because I use this same setup for PSK31.

Regards

Neil, NM9T

Subject: [dxsoft] Re: Trouble with CWGet

Hello Martin!

I do not understand your problem with the CWGET-program.
I have used the program for the last 5 years, and I think it is the best CW-decoding program on the marked, and it is free to use, but 35 $ registered.

When starting the program, and connected to a receiver, as showed in the help file, you shout be able to see some wave-movement in the window under the bottom-panel.

If you here a CW-station in the loudspeaker, then you can see a "pic" in the wave-moment window. Now hit the button "GoToMax", and you would see the RED vertical pin pointing on that pic in the wave-movement window.

In the bottom of the program-window, you would see the wave-form of signs, being decoded with HI - LOW forms.
Here you also have a colored horizontal line pointing on the level of signal-strings.

Now hit the button "AutuThr" - the first in the button-panel - and now the program is starting to write letters. You can also move this horizontal line with the mouse - just point and click.

Be aware..
Until you fully understand how the program is working, you must experiment with the signal strength from receiver to your PC, and I recommend you to have a potentiometer (1 K Ohm) for regulation. It is possible to KILL your sound-card, by overload the input to the soundcard.

If you are not a CW-operator, you must understand, that HAM-radio-language in CW would bee lots of codes, f. ex. The Q-codes and lots of shorted messages, and NOT CLEAR language.

Mush like: " TNX QSO DR OM ES TU CALL - WE WKD B4 - HPE CU AGN - MY QSO VIA BURO - ALL THE BEST ES VY 73 DE OZ6YM".
This means: " Thanks for the chat (or connection) and thank you for calling - we have been working before - Hope to see you again - my QSL-card (a posted card) goes via (QSL)bureau - All the best
and my very best greetings from OZ6YM"

Use the CWGET program after you have learn the basic CW-decoding by listening, to get the most out of it.
CW is for me the real HAM-radio-communication, and I LOVE IT!!!!

If this is NOT working for you, I think that you have a major problem, but tell me about it!

NOTE: Itryet to write you directly, but gote this message:
I'm sorry to have to inform you that your message could not be delivered to one or more recipients. It's attached below.

Hello Martin!!!
As I see it, it WORKS!!!!
You must experiment with the noise, fading signals and band wide to make a perfect reading.

In your Capture-file I read a lot of the codes and shorted words, and that is what CW is.

Therefore you must try to learn reading the CW by listening, to get the words, the program is missing.

Many HAM's do there keying badly, so the perfect signs give a perfect readings. If the keying is done with a "PUMP" it would maybe not give the perfect signs, so the program try its best. Some HAM's make a very short DIT and loooong DAH, and the program get confused. Therefore you have to learn so much CW, so you can fix the error by ear.

You are on the right road to read CW, but give it a little more time to experiment, and lots of time listening.

Congratulation Martin ☐ IT WORKS!!!

With Kind Regards,
(Vy 73 de OZ6YM)

From: Palle A. Andersen
Topic: 4181 Message: 4214

"es cua 73 w5ghz de kb5gxd SK"

This is perfect reading of CW.
CW is NOT PSK31.
GWGET is a decoding program, NOT a communication-program. It would NOT decode a BAD CW-signal.
Some HAM's send very short DIT and very looong DAHHHHH, and CWGET is confused. Sometime the signal is faiding and CWGET is confused.
If you do not hav a CW-filter in your radio, the AGC would kill a weak signal if a strong signal starts in your reciver-pass.

So many problems could appear decoding CW.

You MUST learn reading by ear, to get the full fun of CW.

de OZ6YM, Palle

4219. Trouble with CWGet

Yahoo group: dxsoft
Date: 2009-04-28 15:25:30 UTC
From: nf.martin@att.net
Topic: 4202 Message: 4219

Sergei:

I like your attempt at circumlocution, but what about your product?
If I already knew CW well enough to decode in my head, why would I need your software?
If this is the best that you can do to advance the causes of CW, then you have failed miserably!

This software DOES NOT decode CW as promoted on your website.
What it does do is to pretend that it does. If your software was able to decode CW, then why all the errors?
Why the missed characters? Why the blank spaces?
Even when the signal stays strong, like from a CW operator about 10 miles away, it still does NOT decode all of the words.

Forget all the excuses about:
- it's the sender hand/fist that causes the problem,
- the sender has too short dits and too long dahs and this confuses the program,
- it's because the signal fails or grows weak,
- the radio filters are not adjusted properly,
- the band pass is incorrectly adjusted.
- there are many 'character codes' in CW. If you don't know them then you will not understand the CW communication.

These are just excuses for the poor performance of this software.

"I have to get the words that the program misses." What is that?
So now I need to do the work that the software can not do?
So I need to know CW in order to use your 'decoder'. What is that?
"I need to fix the errors in the software with my ears." What is that?
"The programs tries it's best." Well it certainly doesn't try is best when it comes to decoding CW.

My expectations were: that the software decoded CW. It doesn't.
It only decodes portions of CW, but not the whole CW communication.

"CwGet is very useful if user knows Morse code himself,
but it is almost useless if he can't read CW with his/her ears". What is that?
So this software does not really decode CW, it relies upon the listener to decode CW.
Like I've said before, if I could decode CW with my ears, why would I need this software?
Please explain.
What function does this software perform, since it does not decode a complete CW communication?

Regards

Neil, NM9T

4221. AALog 3.0 build 1120

Yahoo group: dxsoft
Date: 2009-04-28 18:53:50 UTC
From: Alexander Anipkin
Topic: 4221 Message: 4221

Dear dxsoft users,

I just upload new version of AALog to website.

If you do not use AALog 3 before then use www.dxsoft.com/aal3.zip
for fresh install.

If you have AAlog 3.0 then use www.dxsoft.com/aal3-upd.zip for
update previouse build of AALog (build 1112 an later).
You need to update award statistic (Tools | Update award statistic)
after update your AALog.

Best regards,
Alexander mailto:aia@...

4222. I'm going through a shrinking spurt

Yahoo group: dxsoft
Date: 2009-04-28 16:42:01 UTC
From: Paul Romig
Topic: 4202 Message: 4222

Dear Group,

I would like to throw in my two cents on this subjecyt. I am very happy about Neils question of how to get CW Get to work. I had no idea and spent several hours trying to figure it out. When Neil asked the question he got some very good answers which I followed.
The one from Palle Andersen was one of the best. While it still did not define all the terms it did enough to get it working. When I learned how to adjust the bottom window to half the peak height the results came in beautifully. Yes, there are holes and someone should explain to Neil that this is normal in radio communications over a considerable distance ie, not a constant signal like one gets from a CB band two miles away. (Wouldn't that be beautiful?)

I still don't know what all the switches are in the program, but maybe I will find out with some experimentation. In the meantime I will use CW Get to confirm what I am hearing and to provide a written document of what I received. A written instruction or explanation manual, in non-engineering terms would be very helpful for pharmacists like myself .
Thanks to everyone who contributed to the discussion. It helpd me get the tprogram going.
Now, for CW Type.

Paul Romig KE6BYC/7

This is probably a longshot, but make sure that the SpLock (Speed Lock, last button on the right) button is NOT pressed in. If it is, and the speed that CWGet is trying to use doesn't match the speed that the code is being sent out, CWGet will have problems decoding.

Neil, NM9T
SRI for wrong name earlyer...

By reading this last message from you, I become aware, that you do not have any understanding of, what CW is, and what CWGET can do for you.

Try som other program to decode CW, and you would see, that CWGET is over all other programs, but you must know the nature of CW, before you judge.

If you want communication-program, then use a program where you do not need your head.

Why do you think that people must learn CW for month, before permission to go into the air ?
Because of the nature of the signs....
This nature is totally different than RTTY or PSK31.

There is no problem decoding a perfect CW-keyer, and a keyboard-CW-keyer, but this has only existed in the last 15 og 20 years.

NO ONE has ever made a CW-decoding-program being able to decode what i am thinking, only what I am transmitting.

This last letter is NOT fair!!!

Neil,

While you are forgetting about all the author's excuses, don't forget about your excuses for not copying CW in your head. People can learn more than one spoken language. So, what is the difference, unless there is a mental disorder. My 2 year old grandaughter is learning Japanese in parallel with English and also using flash cards to learn morse code. My son learned English, French, Latin and Greek in High School. If he tried CW he would learn it also.

The human brain is designed for Analog processing and it excells at that. Digital processing is not a strong feature of the brain. Math is more difficult for the brain than sensor processing (Sight, Smell, Audio, touch, pain. This has been well known by researchers for many years. Since CW is part digital and part analog, the brain does better than software. For $49 don't expect to get the kind of service from software that the U.S. Governemnt Spyware Department (National Security Agency) can get.

If you want to be a serious DXer, learn the code and master it. If you want to be a ragchewer on CW learn the code and master it. The software needs artificial intelligence capability to be able to handle all the nuances of manually operated CW, Vibroplex Bug, poor fist, bad dot/dash/space ratio, QRM, QRN, QSB, etc. We cannot afford the cost of artificial intelligence in our software. If you are not a CW op, then you can't possibly understand the complexity of Morse Code sending and receiving. Go to RTTY or PSK if you want, and you will also find that the decoders for RTTY and PSK are not perfect either, just better than decoding CW because of the nature of Digital Modes.

I have to give a lot of credit to Sergei for his software. He des a fine job with what he has to work with.

Well Neil you must not know what shortterm memory is so I guess I have to spell it out when the fourth or fifth character comes along I ferget the first one. I can copy some words at 35 (the whole word) but not long ones, at 20-25 I can write that fast but can't type that fast so contesting at 35 40 wpm you need to copy calls. I use cwget to confirm what I copied. This stupid brain can sometimes copy what cwget can't, especially a bad BUG operator.
Yea I know use RUFZ, my two finger typing ain't fast enough.

I agree with Sergei, OG6YM. Your last letter was "not fair" and his comments regarding "perfect" sending is true, as you will find if you tune around enough. . . . If everybody would use CWType, there would be no problem. . .

I, for one, sent very sloppy CW, and still do, but that is why I got CWType and CWGet to make it easier for those who have a hard time with CW. . . If all you want is perfect communications, then I would suggest SSB, internet, or the telephone. . . This is meant to be a hobby, and emergency communications media. . . Both programs are meant to be an assist, not a crutch. . . . How many times has an Amateur had his computer at a shelter, or assisting emergency personnel, in order to communicate? At least I haven't, and I have had my share of hurricanes and forest fires to realize that your computer cannot replace human resources. . . . HAVE FUN AND EXPERIMENT!!!!! That is what I have been doing for the last 64, yes 64, years as a ham ,(and non-ham). . . .

Hi Paul sri I had to pick on some of the bug operators. So that I don't discriminate I'll also pick on the cw 0ps that use paddles and a keyer. some of the op's don't put in word spacing and sometimes not even letter spacing. no letter spacing screws up cwget, and no word spacing screws up this pea brain of mine LOL.
Hmmmm now who else can I pick on.
Having said all that. Even though my CW ain't what it used to be I still operate more CW than phone. I like chasing DX and contesting.

OK, let me/us get this right.

1. I bought this software to decode CW. This was my only expectation.
2. My expectation for this software to decode CW have NOT been met.
3. I do NOT know CW, or I really wouldn't need this software.
4. So in order to use this software you must know CW. Well isn't that great!
5. Since I'm trying to LEARN CW, then I guess that this software is a waste of my time and my $ 40.00.
6. I'm not exactly the dumbest guy on the block, but new to amateur radio.
7. I've waited 50 years to become a ham. Guess what took me so long, CW.
8. Now that I don't have to learn CW for my license, I would like to try to learn CW.
9. Guess this is the wrong software for me now and maybe in the future!
10. Sorry I got everybody upset, I was only trying to find out why this software had all the errors.
11. Didn't realize that most of the users accepted software that only performs half the time.
12. Since I work in IT, the expectations and the deliverables should be relatively close.

Thanks for all you help.

Dear Neil,
I am just wondering - why don't you use a nice word "IMHO" in your messages?
Why you are so (may be "too") strict ("...bad performance of a software...",
"...Sergey failed...", etc.).
Your previous letters look like a prosecutor's speeches.
Well, you did not manage to satisfy your expectations after purchasing
Sergey's software. I don't think that that's Sergey's fault.
I fully agree with Dan - very completed answer.
Dozens, even hundreds HAMs are using the "DXSOFT" company's products with no
(or with minor) problems.
One of my friends' son is trying to study Chinese using a pocket-PC, with no
previous experience in even a spoken Chinese. Who/what is wrong? A boy, a
palm-top, or the PRC?
Best regards,
Narynbek ("Bek") Djunushev, EX8AB (ex UM8QDX)

From: Palle A. Andersen
Topic: 4202 Message: 4232

Neil, NM9T
I will do one more try to make you understand....

You see, I bourght some years ago a package with MS Windows 3.1, and I expected that after installation on my PC, it would work perfectly, but it did NOT. Then I bourght a packed of MS Windows 95, and I expected it to work perfectly after installation, but it did NOT. Then I bourght a version of Windows 98 - NOT working, then MS Windows 2000 - NOT working, then again Windows XP, NOT working god enough, then MS Windows Vista - NOT working, and then I went back to the XP version, and said to myselv: "Who is the stupid one ? Me or Microsoft ?".

I expect you, as a IT-working man, to understand, that nothing in the world is perfect, not even your selv (or my english languarge)

The nature of CW - NO TIMING BAUDRATE - is very difficult to decode under all existing possibilitys.

Try to see how DATA-transmission via satelite-links is send, and you would expirience, that it is put in package, and some time these are send many time, the same package, becoe of error.

A CW-operator has only one way communication at the time, so he do not know, if you did not get all the message he send, so he must wait until you ask him to repeat that part of the message, you did not recive.

CWGET have error-free recieving of CW, but is not able to see, if you, as an operator, do errors, and I understand why, and I understand the nature of CW, so I accept these error, and try to minimize these, by learning to recieve with my ears, and that is all about recieving CW, since mr. Morse maked the codesystem back i 18xx.

Niel, I would give you a last adwice: Take your CWGET-Licens Key, and put it in the garbage-can, and from this day, do not ever think about CW.

So, what is the difference, unless there is a mental disorder. My 2 year old grandaughter is learning Japanese in parallel with English and also using flash cards to learn morse code. My son learned English, French, Latin and Greek in High School. If he tried CW he would learn it also.
>
> The human brain is designed for Analog processing and it excells at that. Digital processing is not a strong feature of the brain. Math is more difficult for the brain than sensor processing (Sight, Smell, Audio, touch, pain. This has been well known by researchers for many years. Since CW is part digital and part analog, the brain does better than software. For $49 don't expect to get the kind of service from software that the U.S. Governemnt Spyware Department (National Security Agency) can get.
>
> If you want to be a serious DXer, learn the code and master it. If you want to be a ragchewer on CW learn the code and master it. The software needs artificial intelligence capability to be able to handle all the nuances of manually operated CW, Vibroplex Bug, poor fist, bad dot/dash/space ratio, QRM, QRN, QSB, etc. We cannot afford the cost of artificial intelligence in our software. If you are not a CW op, then you can't possibly understand the complexity of Morse Code sending and receiving. Go to RTTY or PSK if you want, and you will also find that the decoders for RTTY and PSK are not perfect either,

just better than decoding CW because of the nature of Digital Modes.

Palle:

The software does not function as proposed, decode CW.
I will learn CW without the of use of DXsoft or CWGet.
Comparing a basic program like CWGet with the complex o/s of MS Windows is NOT even close.
All of my versions of MS DOS & Windows have performed at about 95% of expectations, not perfect.
No one suggested that CWGet was to be perfect - how about 75%, and it's not even close, try 15%.
You seem to imply those who expect the software to perform as advertised - stupid.
How about recognizing that MAYBE the software could or should perform better.

If that's not possible, then don't tell non-users that the software decodes CW.
Tell them that it assists in decoding CW if you already know CW.
I just try to call it honesty in advertizing. Say what you mean and mean what you say.
I will just chalk up the $40.00 to experience - buyer beware.

Nobody would suggested that because you had problems with MS Windows software that you were stupid.
I guess if you have had all of these problems with MS Windows, maybe you should switch to Apple.

I don't know why the functions of other non-CW related issues enter into this discussion.
I have already stated that I don't know CW yet. What is so hard to understand about that!

Thanks for you input.

4235. Color sheme on QSO list

Yahoo group: dxsoft
Date: 2009-04-29 12:41:15 UTC
From: mirkatmir
Topic: 4235 Message: 4235

The program AAlog 3 (ver. 1120) does not want to show the colors for the received or sent QSL on my list of QSO (even line), although I have adjusted the color settings. In previous versions this was work OK.

Bek:

Thanks for your input.
If you have looked at the beginning of this thread, you would notice that I asked for assistance.
As the thread progressed, it was suggested that it was inappropriate to use CWGet unless you knew CW.
Then, it escalated to suggesting that there was something wrong with my ability to use the software.
I had already explained that I did not know CW - YET.

All I stated was - the software does NOT decode CW.
What I have experienced was about a 15% performance in decoding CW.
Then I received an explanation of why it only worked 15% of the time.
Well, the explanations are quite valid, except that 15% performance is not considered acceptable.
So this was not a MINOR issue.

My expectations were that CW Get decoded CW, it doesn't unless you know CW.
Not really a great selling point. Not pointed out in any of the information I read on CWGet.
So, I stated my frustration with the lack of performance by CW Get.

I not sure what a non-CW related issue is mentioned in this thread.
But any way, only one or 2 people have offered to help me with this issue, all the rest have tried to suggest that there must be something wrong with me. Obviously you need to know CW to use CWGet. That was NOT obvious in any way shape or form.

Thanks for your comments.

Dear Neil,
I am just wondering - why don't you use a nice word "IMHO" in your messages?
Why you are so (may be "too") strict ("...bad performance of a software...", "...Sergey failed...", etc.).
Your previous letters look like a prosecutor's speeches.
Well, you did not manage to satisfy your expectations after purchasing Sergey's software. I don't think that that's Sergey's fault.

I fully agree with Dan - very completed answer.
Dozens, even hundreds HAMs are using the "DXSOFT" company's products with no (or with minor) problems.
One of my friends' son is trying to study Chinese using a pocket-PC, with no previous experience in even a spoken Chinese. Who/what is wrong? A boy, a palm-top, or the PRC?
Best regards,
Narynbek ("Bek") Djunushev, EX8AB (ex UM8QDX)

From: William Swartz
Topic: 4202 Message: 4238

I use CWGet, I can decode in my head. I use CWG with CQ100 running same screen with QRZ. Yes, I have 3 open windows on XP this lets me do other things and not have to devote all my attention to copying the code. Also, instead of CQ100 I will hook up one of my hf rigs and work on hf as well as CQ100, which I like as it lets me work with some Tech. friends who just want to work code in an non-qrm environment.
Love it, it works and guess strange things come out of Cook County...used to live there so it not a surprise seems like one can buy anything there.
Suggest adjust filters and double check cables and sound card for the real problem.

Sorry...
If you do not understand....
I do not think I am able to make you...

I must repeat:
" A CW-operator has only one way communication at the time, so he do not kn= ow, if you did not get all the message he send, so he must wait until you a= sk him to repeat that part of the message, you did not recive."

The program, CWGET can not take on the responsibility for the error of the = operator, or if operator is transmitting messages in code you do not unders= tand. NOBODY but you would expext that!
If the operator is chinese, would you understand hes messages?

If you would claim, that PSK31 or other digi-programs is not working, becau= se of spelling-error or other operator-error, then...

I my eys, the CWGET-program is working over the mountain, because I have bi= n working with CW since 1973, and tryed myselv to make a working decoding p= rogram, so I know which problems to face..

If you are not able to see my point until now, then i rest my case.

And this conclude my view about "Truble with GWget".

From: Sholto Fisher
Topic: 4202 Message: 4241

All,

I have paid for and use CWGet and I find it to be a very good program.

I am a computer programmer and I have attempted to write software (in the DOS days) to decode live Morse Code signals and it is not a trivial task.

The computer acronym GIGO (Garbage In - Garbage Out) really applies to live CW signals. The "garbage in" can be from a number of sources, e.g. poor fist, QSB, QRM, receiver dynamic range and AGC action for instance.

I think it is fair to say that CWGet does decode Morse Code well, and my experience of the software has been very positive.

To illustrate this I captured a screen-shot of the program working just now - I literally found the first reasonable strength signal I could on 20m and let the program run.

See the picture here:

http://www.qsl.net/k7tmg/cwget.gif

The first characters E's & T's were while I was tuning around but you can see it locked on to a transmission that was obviously not machine sent and did a very good job decoding it.

As you can see, the ham sending the code did not have perfect spacing and also uses a lot of CW abbreviations but CWGet did a faithful job in my opinion.

Maybe part of the confusion could arise from these CW abbreviations (if they are unfamiliar to you).

Consider this text from the screen-shot:

gud eyeball tommyesvic yesterday lotfun = okuenjoyesbe safe escwl

At first glance if you don't know CW it might look like false decoding but what it translates to is:

"Good eyeball with Tommy and Vic yesterday, lot of fun. OK you enjoy and be safe and see you later".

Eyeball means "a meeting" in person.

I can decode CW in my head and that is exactly what was sent by the guy. Even the mistake of "cwl" instead of "cul". W & U are similar in Morse Code and this guy sent a W instead of a U. Happens all the time.

I hope this helps.

By the way, even though I can do CW the old fashioned way, I like to sometimes press the "Auto-Pilot" button which is why I use CWGet. I also use MRP40v61, PocketDigi and MultiPSK for CW decoding. Each has its own strength and weaknesses. Try all four together (if you have WinXP or higher) and you can see which perform the best under certain conditions.

Good day all,

Although not a user of CWGet myself, I believe it has a far better success rate in decoding hand-sent morse than the best optical character recognition software does in deciphering hand-written zip or postcodes on mailing envelopes!

This is getting out of hand with stupid remarks.

The fact is CWGET is a great program for copying Morse code. It copies exactly what it hears.

IT CAN'T COPY BAD CODE SO QUIT YOUR BELLY ACHING.

I Think everyone is giving much too much attention to Neil. He is not experienced enough to have an opinion about CW, or, frankly, about any software that tries to imulate the capability of the human brain. From what I see and his claims about bein an IT professional, if it doesn't have thorough handshaking, he is lost.
Let him go on without our help- maybe he will do something surprising, like understand what he is talking aboit before posting.

Sholto,
I had the same, "What is this" experience when I started with CWGet. I'd been away from CW for a long time and frankly was not that close to it the decades ago when we had to learn it.

So when I started seeing "text" come out of CWGet I thought it was garbage because I didn't understand the abrv and their varieties.

It took many, many months to get my ARRL 20 wpm certification (got my AE a year or so ago and wanted to do it "old school" by passing a 20 wpm test). It was harder than the days of the FCC office because over the air there was QSB and QRM. And those hams (?) who would tune up on the freq. during training and qualifying exams.

What was interesting was - if I let CWGet run on it's own while I copied with just my ears - whenever I had a problem, CWGet had a problem too. That is, CWGet hears what I hear. If I hear a mess, the CWGet copy is a mess too. If I hear a strong signal and a clean fist, CWGet also has solid copy. That sounds fair to me.

I've tried other CW decode programs and CWGet has always come out on top. Some might call it a crutch, but it has kept me involved with CW and given me confidence to try QSO's at slightly faster speeds than I'd normally be comfortable with.

It does take a little adjustment - best done with clear, strong, good sending like ARRL practice sessions (without QSB and QRM). I can monkey with the controls and see their influence - then go after real game.

73,
Paul

4246. Re: [dxsoft] Re: Trouble with CWGet

From: Jack Heller
Topic: 4202 Message: 4246

Hello Neil,

I have followed this thread the last couple of days and I will
comment.
Not because I can make your problem go away -- Wish I could.

I understand your frustration, and I also agree with many of the
helpful hams who took the time to assist. And that is quite a show of
loyalty from the ham community.

Something came to mind while reading and trying to understand
both
sides of the debate. That is, this is not a win/lose situation.

Be patient for a minute with a few thoughts. You have heard the
adage
that you can't win an argument in politics nor religion. True -- but
there is something close to those subjects in this discussion with a
group of dedicated hams who are totally devoted to their excellent
perception of CWGet. There is no real middle ground -- Neither side
will give because BOTH sides are sure their view is correct.

Best you can do Neil is a standoff and that is hard to swallow
-- been
there, done that.

Those thoughts out of the way, let me say this: I have dealt
with
Sergei over the years and value his expertise in this field. His
TrueTTY is about as good as it gets. I have not viewed CWGet for a long
time, but when I did sample it, I would say the ancient (in today's
view) version I used was quite good and I expect the current version is
much improved.

I have used a number of CW receiving programs and the best luck
has
always been to tune to a broadcast of computer defined CW. Under proper
conditions, that is as perfect as CW reception gets. That is one sure
test of a CW receiving program. ARRL was a good source for this with
their bulletins. I have not checked to see if they still do this.

All other CW signals are subject to the same problems the
respondents
to your complaint have addressed. No need to repeat those here.

My suggestion? Don't throw the CWGet away. Keep it, tune it to
a

signal every now and then and keep prodding your brain to decode for you. I recall learning the code 60 years ago and the best practice was to listen to hams and the thrill it was to copy a call sign and realize this signal was being sent through the air from many miles away. A great incentive to keep me going. In those days, the minimum code speed was 13 wpm to get a class B ham ticket (entry level.) I was 15 years old at the time.

As you read this, you are probably wondering if I have quit this racket. Well. no I have not. I have been using Linux for the past few years and doing HF digital modes with that operating system. Just another ham approach to life.

As I started this note, I stated there was no way to win the argument,
but ham radio is worth the passion it takes to simply "just do it."

Gentlemen

Let's all try to remember back in the days when we were starting in this hobby. We were enthusiastic about getting on the air. We were in a hurry to get a radio, antenna, pass the FCC test and get on the air. The same enthusiasm still exists today with new hams.

Here is the difference. Today's generation of people are computer people. You buy a computer, iPhone, Blackberry, etc. and start using it succesfully. There is no waiting. There ere no errors. It just works. Period. Now, imagine being of this culture and trying to use an application that has to emulate the brain in both analog and digital signals. Mix in some atmospheric noise, some Lid on frequency, a CW fist that has it's own signature, signal fading below the threshold. As a NOW generation person, you would expect the application to work because that is what you are accustomed to.

Just like going to school to learn IT, or Medicine or Engineering or whatever, the important thing is that it takes time to learn. The same is true with CW which is not a pure form of communication. There is no error checking, no start and stop bits, it is totally variable in every way possible. It is like standing in a crowd of people at a football game and trying to have a conversation with someone 5 seats away. When there is no excitement in the crowd, the conversation goes smoothly. When a player starts heading for the goal, the crowd generates a lot of noise and you can't hear yourself talk, let alone someone 5 seats away.

The good CW operator can pull a signal out of the noise when the computer cannot do it. But it takes years of experience to do it. I am 60 yrs old, licensed in 1963 and I am still learning.

But the subject of my message here is that there is a different generation of people in the hobby today. I would not discourage them. It is just the nature of things that they have different expectations of the hobby and the tools that go along with it.

The real CW DXer will not, and cannot use software tools for CW reception and still make the tough contacts. He will have to master the code in his head.

Example, there is VP6DX on the air. There is a pileup up 5. The new gen hams have a computer in their pocket and receive a cluster spot and a notification that VP6DX is now on 15 m CW. They run to the radio room, look at the computer spot, click on the spot, the computer puts the radio on VP6DX VFO A and VFO B on the last frequency spotted. By the time all this happens, the VP6DX is now listening on another frequency. But when you listen to the pileup, the techies are all centered on the last spotted frequency.

The real DXer is transmitting above or below the pileup and will likely make the contact.

So, the newbie will either learn the code and rely on his ears, or will give up on CW and go to a more reliable mode such as PSK or RTTY.

I could ramble on but that is my 2 cents.

hi guys i know why these guys belleyaking see whats happning here is they want to come on the bands at 100wpm and creat qrm showing off how fast they can send code but i guss the program hold them back a bit hi hi i was licened in 1984 do 10wpm for b class 20 wpm for a class i fell in love with the sound of the code first time i herd it i only do cw only work the world on cw but i think the guys of third world opratiors need read it very fast and send it fast problem is not the program ther uasing . the program is doing fine its them is the problem if you cant feel morse you cant copy u goto get in code leave code to people that can work in noise see if the computer fails there code speed drop to zero they depend on programs to work be a ham do it like a ham use your brain cant work a gud pile up reading code no fun feel it ..,why u guys complain is that you cant coppy code if your computer Aon the screan you go along with it BUT IT WAS AN R i see the cwget on line purchase it did this out of suport of or for a guy a fellow ham who made up these little things to make the hobby more enjoyable my hat off to you guys and if you love cw remember you goto feel it 73s 6y5jh

4250. CwGet "accuracy"

Yahoo group: dxsoft
Date: 2009-05-01 00:16:13 UTC
From: Mark Amos
Topic: 4202 Message: 4250

All,

I did a completely unscientific measurement of CwGet "accuracy" and thought I'd share my results here. Overall, the results were about 98% accurate copy.

I copied W1AW code practice at 20 WPM (maybe 18?) and compared the results to CwGet and have detailed the results below. Also, at the bottom is the text I copied and the text copied by CwGet.

For the "test", the radio I used was an HPSDR and a 1/4 wave vertical on 40 meters running PowerSDR software feeding the audio to CwGet. The signal strength varied from S5 to S9+10 over an S2 noise floor (on a calibrated S meter.) The missed characters were during dips in the signal. In all fairness, I had trouble with them too (in two of the drop outs), but could guess the words based on context. There were only three of these during the test.

I was using a 25Hz filter (in the Radio) and a 140Hz filter in CwGet with a 500 lpm burst filter.

By my count (which is probably off - I didn't count punctuation errors, since I don't generally include punctuation in my copy) it appears that there were 3 word mistakes out of 105 words. The letter error rate was about 9 characters mistaken out of 550 characters. I didn't bother calculating the element/bit error rate - but I suspect it was less than 1%. Obviously there is no error correction with CW so you get what you get...

This is an insufficient test to conclude much about the accuracy of CwGet (an N of 550 is pretty small and the conditions were good.) With fading, QRM, a bad fist, etc., etc. the accuracy of the program would suffer (as would mine.) I have a better processing engine for syntax and grammar and error "correction" (my brain) which gives me an advantage in filling in missing letters/words. On the other hand, CwGet can copy accurately at 50 WPM (at that speed my accuracy is about 20% comprehension - I can't copy accurately over 30 WPM no matter how good the conditions...)

In any case, I think it's a pretty good tool. I've tried a few others and CwGet seems to be head-and-shoulders above the others I've used.

FYI, there's a neat article in HAM-MAG this month on a "hardware" decoder (uses PIC software) that looks like it would be fun to play with. I haven't looked at the code, but I suspect it won't be much competition to CwGet. I wrote some CW software in 8080 assembler back in the 80s and while it copied machine sent code (via a keyer) at 100%, it could only do it at 12 WPM and it barely worked at all on-the-air...

Anyway, I just thought some of you might be interested in my "unscientific" test.

4253. AALog 3.0 Essentials

Yahoo group: dxsoft
Date: 2009-05-03 14:07:08 UTC
From: oceanbiz01
Topic: 4253 Message: 4253

I have just uploaded a file named "AALog 3.0 Essentials".
This is a set of instructions that I made while trying to make AALog 3.0 work here in my shack. I upgraded from 2.47, however, I do believe that even a new user of AAlog will need these instructions. Anyone who has useful info should add to the instruction list and notify me by email so that I can have a copy.

I still have a few other problems with AALog 3.0 but these problems do not prevent me from using the software.

I am hoping that Alexander will fix these problems soon.

Any questions, please contact me at dan-schaaf@...

4254. AALog 3.0 and DXAtlas New Idea

Yahoo group: dxsoft
Date: 2009-05-03 20:14:19 UTC
From: oceanbiz01
Topic: 4254 Message: 4254

Hello to all users:

I have an idea which I think is a new idea and useful to VHF users. As you know, VHF users and some 10 meter users are grid hunters. Well, AALog 3.0 does a nice job of keeping track of grids and the Awards Statistics in 3.0 lists grids.

Now, imagine if AAlog 3.0 could send colors to DXAtlas grids. Colors such as "Worked Yellow", QSL Sent Blue", "QSL Received Fuscia" "QSL sent/received Green". Each grid square could be marked by color and it could be viewed as you move the map from NA to SA to EU etc.

This feature would make grid hunting much easier since you could see what you need and don't need. Since AALog lists all grids, and you are working 2 meters in Florida, it is a waste of time to scroll down from grid AA00 to EL or EM or FN grids, it takes a long time. Whereas, a graphical image would be useful.

And it would be nice to print from DXAtlas the Current View or a selected piece of the world grid map.

If anyone else is interested in this idea, please email the authors of DXAtlas and AAlog 3.0 and please post your responses here on the group.

Subject: [dxsoft] AALog 3.0 and DXAtlas New Idea

Hello to all users:

I have an idea which I think is a new idea and useful to VHF users. As you know, VHF users and some 10 meter users are grid hunters. Well, AALog 3.0 does a nice job of keeping track of grids and the Awards Statistics in 3.0 lists grids.

Now, imagine if AAlog 3.0 could send colors to DXAtlas grids. Colors such as "Worked Yellow", QSL Sent Blue", "QSL Received Fuscia" "QSL sent/received Green". Each grid square could be marked by color and it could be viewed as you move the map from NA to SA to EU etc.

This feature would make grid hunting much easier since you could see what you need and don't need. Since AALog lists all grids, and you are working 2 meters in Florida, it is a waste of time to scroll down from grid AA00 to EL or EM or FN grids, it takes a long time. Whereas, a graphical image would be useful.

And it would be nice to print from DXAtlas the Current View or a selected piece of the world grid map.

If anyone else is interested in this idea, please email the authors of DXAtlas and AAlog 3.0 and please post your responses here on the group.

4256. License key issue

Yahoo group: dxsoft
Date: 2009-05-04 09:24:31 UTC
From: mchirkov
Topic: 4256 Message: 4256

I recently purchased a license for AALog 3.0. Did as instructed - copied the aalog.key file into default AALog directory under c:\Program Files\AAlog3\

Nothing works. It still tells me that "Trial period expired"

Any idea what to do?

Thanks,
Mike

It will only receive cw perfectly only if you have a perfect cw signal to decode. That means no static and no interference like an adjacent cw signal or one on the same frequency. You can google cwget and download it for free. You take the audio from your receiver and run it to your computer mic input.

Afzal,

إله والكمال

If you seek perfection in any product of this world, I would advise you to abandon such a quest. It is not possible to buy such a thing.

However, if you wish to purchase a good CW receiving product, CwGet is very effective. It is available for purchase at:
<http://www.dxsoft.com/micwget.htm>

Mr. Afzal!
I have used CWGET for the last 8 years.
Before that I have try'd my selv to make a decoding program for CW.
I have bin teaching other HAMs CW for many years, so I know the nature of CW, and I know how different a singel letter could be, depending on, who is sending the letters.
You must know the nature of CW, before asking this question.

No program can to day or EVER in the future decode CW 100 %, because of this nature.
You will experience, that sometime, where the sender is trained and good with his key, or if he use a computer keyboard to transmit, and with signalstringht over S5, a program to recive CW works 100 % perfect, but then som noise arive and spoil the signal, or the signal is faiding down in the noise, then the perfection disapeare, and the recivibng goes down to 80 % or less.

That nature is impossible for a programmer to overcome.

The conclution must be, that CW-decoding can work 100 % if the condition is right.

You must make your own expirience.

You need set Use DXatlas checkbox in the AALog properties window and
enter your Grid or Coordinates in the selected log configuration.

4267. SeaTTY 2.30 is released

Yahoo group: dxsoft
Date: 2009-06-02 09:24:56 UTC
From: Sergei Podstrigailo
Topic: 4267 Message: 4267

Hello All,

I just have uploaded SeaTTY 2.30 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

--
Best regards,
Sergei

==========
SeaTTY versions history

V2.30
More settings for spectrogram and oscillogram colors were made.
V2.21
Options for tuning auto start / auto stop parameters of FAX mode were made.
See "Setup/FAX" page.
V2.20
Message filename shows time of message start, not time of message end now.
"Setup / Other / EOM timeout in SAME" option was made.
A bug was fixed - a message with station ID in filename couldn't be really deleted by
"Delete" command.
"Auto start" and "Auto stop" procedures were slightly optimized in HF-FAX mode.
V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.
V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
[...]

From: John Belsize
Topic: 4267 Message: 4273

FIPS are the numbers transmitted by SAME and that SeaTTY decodes.
I suggest that an alarm be activated when a specific number is transmitted, decoded and identified (user selected) by SeaTTY that either plays a wave file through the PC speakers or opens up the audio received by the PC from the radio. This audio will close when the EOM is received.
The logic of this is present with your record function.
A great diagnostic tool and piece of software Sergei!

4276. AALog 3.0 build 1120 questions

Yahoo group: dxsoft
Date: 2009-06-06 20:11:01 UTC
From: gfredhei
Topic: 4276 Message: 4276

I have started to use AALog 3.0 build 1120 for logging my QSO's. I like it very much. I have imported my previous QSOs from my old log program and I have also imported QSOs from AATest with great success.

I have a couple of questions about/problems with AALog:

- How do I automatically get UTC as the time for my QSOs? Now it always starst with my local time (UTC + 2). I then have to manually set the correct time.

- I have set most VHF/UHF/SHF-bands to Hide (Config Menu-->Band List) so they don't show up in the band list for QSOs' Now I want to show the 6m band but I am unable to unclick the Hide band.
I get the following message:
EditBandForm.Query1:
Can't format message 13:794 -- message system code -4.
Dynamiq SQL Error.
SQL eror code = -206.
Columns BAND.BAND_EXT cannot be repeated in UPDATE statement.
At line 1, column 244.

Please help!

4278. Looking for help with Navtex

Yahoo group: dxsoft
Date: 2009-06-07 00:11:17 UTC
From: scottlirwin
Topic: 4278 Message: 4278

I live in San Diego and frequently travel to baja california for 2-3 weeks at a time to surf and camp in remote spots. I use seatty to collect weather information from the coast guard station in Pt. Reyes Ca.

My setup is pretty basic....a windows xp laptop connected to a Sony SW7600GR radio. I use a long piece of speaker wire as an antenna when I am camping in the middle of nowhere. Nothing fancy but it works.

I don't really have any idea what I'm doing and through pure trial and error I have been able to figure out how to use seatty to collect hf-fax and sitor broadcasts of weather information. Seatty seems to be a powerful tool and it works great for what I need.

Not to go on a tanget but...I found this page to be very useful for figuring out how to listen to hf-fax and sitor broadcasts
http://www.nws.noaa.gov/om/marine/home.htm#dissemination

Recently I have been trying to receive navtex broadcasts while I'm in San Diego. Like I said, I'm learning through trial and error. The NOAA webpage (http://www.nws.noaa.gov/om/marine/navtex.htm) says NAVTEX is broadcast on 518 khz. My Sony receiver can pick "something" up on that frequency. Unfortunately seatty doesn't seem to be able to decode it.

What I do hear doesn't sound like the navtex sample I found on wikipedia (http://en.wikipedia.org/wiki/Navtex) Of course I don't really know what navtex is supposed to sound like anyway...remember I'm figuring this out through trial and error.

Does anyone have experience with receiving navtex broadcasts? If so.....

QUESTIONS:
1. Is it even possible for me to receive navtex broadcasts using my setup?

2. If so, what frequency should I be tuning into?

3. How do I configure seatty to receive the broadcasts?

I'm looking for someone to point me in the right direction so please share any ideas/information you have.

Thanks!

Try looking into Winlink 2000

http://www.winlink.org/

By the way...I looked into this for my needs. I'm in remote locations and need access to weather info. I wanted to use winlink to receive simple text-based weather emails. I found out I needed a lot of power to run the equipment and it was too much for me to handle (I obtain power from a solar panel). I also didn't own the antenna, receiver, amps, and other equipment I would need. In the end it would be cheaper for me to obtain a satellite phone for email access.

s> QUESTIONS:
s> 1. Is it even possible for me to receive navtex broadcasts using my setup?

Yes, if your receiver supports SSB (single side band) mode.

s> 2. If so, what frequency should I be tuning into?

Switch receiver to USB and tune it to 516 kHz.
You should see signal peaks at 2000 Hz in SeaTTY spectrogram.

s> 3. How do I configure seatty to receive the broadcasts?

Select "Navtex", "Normal" and move vertical red lines in spectrogram window to signal peaks.

Scott, you can also receive NAVTEX with your radio in CW mode. A bandwidth around 400 Hz works well. In CW you tune to the exact frequency (usually 518, 490 or 4209,5 kHz). I believe the method Sergei explained to you is the one that works best for most people, but quite a few of us are decoding NAVTEX in CW with slightly better results than we seem to get in USB/LSB.

Check out "Receiving NAVTEX - a simple introduction" and all the other interesting stuff at Alan Gale's site:
http://www.beaconworld.org.uk/navtex.htm .

Also check out http://www.classaxe.com/dx/ndb/rna/?mode=signal_list .You might also want to join the Yahoo ndblist, which is a community for people interested in receiving NDBs, HAM beacons, and short wave "one-letter" beacons as well as decoding DGPS and NAVTEX:
http://groups.yahoo.com/group/ndblist/ .

Best regards

Henrik Thiil Nielsen

s> QUESTIONS:
s> 1. Is it even possible for me to receive navtex broadcasts using my setup?

Yes, if your receiver supports SSB (single side band) mode.

s> 2. If so, what frequency should I be tuning into?

Switch receiver to USB and tune it to 516 kHz.
You should see signal peaks at 2000 Hz in SeaTTY spectrogram.

s> 3. How do I configure seatty to receive the broadcasts?

Select "Navtex", "Normal" and move vertical red lines in spectrogram window to signal peaks.

I would like to thank Sergi and Henrik for responding to my post. I found some useful information about navtex on the links below (including some ideas on how to create a better interface between my radio and my computer).

I tried a couple of the ideas presented but unfortunately I am still unsuccessful. I believe I might be doing something wrong and I would like to provide additional information, including sound samples and screenshots from my computer, to help troubleshoot the issue. I built a simple webpage to display this information. You can view it by going to http://sandi.net/dana/seatty/seatty.htm

Henrik,

Thank you for the idea of exploring 490 or 4209,5 kHz. I tried this and heard other stations (which I was unable to decode). I was surprised at the amount of navtex traffic out there! I am specifically interested in receiving navtex weather transimissions from NOAA and I believe they limit their broadcasts to 518 mhz. Henrik, you mentioned I should use the CW mode on my radio. I don't know what that is. I believe CW represents "morse code" but my radio only has normal, sync, and SSB modes. Is CW mode an additional feature that exists on radios with more features?

Again, thank you to both of you for helping me troubleshoot this issue.

Scott

You VERY override your soundcard input.

If your notebook has only mic input, your need to add external attenuator
like this (REF:B):

http://www.qsl.net/wm2u/images/interface_simple.gif

(But reversed - RX output in place of "Soundcard LINE OUT") and
soundcard mic input in place of "Audio Aux Mic")

Hi Scott,

I listened to your sound sample. There was no NAVTEX transmission I could hear. What I could hear though was probably interference from your computer or monitor.

As Sergei said you were also overdriving your sound card input which causes distortion.

I also have a Sony SW7600GR and can hear NAVTEX fine on it. I usually tune to 517KHz in USB mode and use the BFO to put the tones near 1000Hz. But tuning to 516KHz and tuning for 2000Hz tones is essentially the same thing.

Remember that NAVTEX transmissions are scheduled at certain times and aren't always transmitting.

If you take a look at http://www.nws.noaa.gov/om/marine/navtex.htm you will find the schedule for Cambria and other stations. Remember the time is in UTC not Pacific Time.

What I would do if I were you is try to tune (without the computer turned on) into a transmission at a known time. That will clue you in on what you are meant to be hearing.

Next turn your computer on and if the transmission "disappears" then it is safe to say that the Sony is picking up hash generated by your computer and/or monitor and that is swamping the receiver.

If this is the case you will need to look into positioning the radio further away from the computer and possibly use some form of electrical isolation between the audio output jack on the radio and the microphone input jack on the computer. Typically this will consist of a small audio transformer (can be purchased at Radio Shack for a couple of bucks). Usually these will transform the impedance too. For instance, your Sony has a 32 ohm output jack but your computer microphone may require a 600 ohm input. The Radio Shack transformer at http://www.radioshack.com/product/index.jsp?productId=2103254 is not a perfect match but will provide isolation and get you in the ball park impedance wise.

If you are using an external antenna, try to get it as far away from the computer as possible. That's a direct route for computer hash to get into the radio.

One other tip: NAVTEX transmissions are usually much stronger at night than during the day (unless you are close to the transmitter). Try

listening in during the Evening from say 8pm onwards.

And a final idea. The Sony has an adjustable attenuator, you might find
that control helps a lot in stabilizing a strong signal. I have found
that the Sony BFO oscillator is not very stable on strong signals and by
using the attenuator you will get a signal that doesn't jump around so much.

Here's a recording I made here (with an isolation transformer) so you
know what to listen for.

http://www.qsl.net/k7tmg/navtex.mp3

Good luck!

Sholto

From: scottlirwin
Topic: 4278 Message: 4288

Sergie and Sholto,

Your comments were right on the money. I was able to troubleshoot the issue and identify the problem.

The sound I'm hearing on my receiver at 518 khz is a bunch of garbage being generated by my own laptop computer.

I hear the garbled noise every time I plug the reciever into the laptop and turn on the receiver. Its pretty loud when the two devices are connected together with my audio cable.

The sound goes away if I unplug the cable between the receiver and the laptop, turn the receiver on, AND hold the receiver aprox 2 feet away from the laptop. As I bring the receiver towards the laptop, the sound increases. It gets REALLY loud when I place the receiver immediately in front of the screen and keyboard.

Since the garbage occurs every time I plug the receiver into the laptop, regardless of how far away the receiver is, my next step is to figure out how to place the receiver aprox 2 feet away from the laptop and include some type of filter between the two.

I tried using a couple of those "clamp on" ferrite chokes but they don't seem to do anything.

I'll explore Sergie's idea of an external attenuator (http://www.qsl.net/wm2u/images/interface_simple.gif) and/or Sholto's idea of using a Radio Shack transformer (http://www.radioshack.com/search/index.jsp?kwCatId=&kw=ferrite&origkw=ferrite&sr=1)

This gives me something to play with next weekend :)

Thanks again for the support!

Scott

4289. Re: Looking for help with Navtex

Yahoo group: dxsoft
Date: 2009-06-13 12:31:34 UTC
From: scottlirwin
Topic: 4278 Message: 4289

Oops...I made a mistake in the previous post. My link to the Radio Shack transformer was incorrect. It should have been:

http://www.radioshack.com/product/index.jsp?productId=2103254

I'm actually going to try something else first. I'm going to cut a transformer off of an old modem board. I found some directions for doing this here:

http://www.beaconworld.org.uk/files/interfacing.pdf

Please see p.3. I'll let you know if it works.

4290. Sopt Collector Problem

4291. Re: Looking for help with Navtex

Yahoo group: dxsoft
Date: 2009-06-15 04:59:21 UTC
From: scottlirwin
Topic: 4278 Message: 4291

I thought I would give the group an update on the project.

The interference I'm hearing on 518 khz is coming from the monitor on my laptop. So far, the easiest way I have discovered to solve the problem is to turn off the monitor....of course that makes it a little tough to use the computer :)

I added an audio transformer to the audio cable connecting the radio to the laptop. I followed the directions found here (http://www.beaconworld.org.uk/files/interfacing.pdf). The transformer was taken from an old modem board. The audio cable now measures 150 ohms of resistance.

Unfortunately this didn't solve the problem.

The next step was to lower the line level into my mic input on my laptop. I visited radio shack, purchased some resisters, and created this:

http://www.qsl.net/wm2u/images/interface_simple.gif

This definitely lowered the audio level. I readjusted the audio settings on my laptop but it didn't resolve the fact I can't receive NAVTEX transmissions.

So I decided to just turn off the computer completely and just listen to the NAVTEX signal alone.

I waited until 9:45 PM local time (4:45 UTC) and was BARELY able to hear a broadcast coming from what I assume was Cambria. It wasn't clear enough for me to decode with Seatty. I've tried other times (morning, afternoon, and midnight) but can't hear anything.

Follow this link for transmission times - http://www.nws.noaa.gov/om/marine/navtex.htm

I'm assuming the problem can't be my location....I live 1/2 a mile from the ocean.

So I'm starting to think the problem might be my antenna. I'm using a simple piece of speaker wire aprox 40 feet long that I hung horizontally in my tree. I soldered a mini jack on the end of it and plug it into the external antenna jack on my radio. This works fine for transmissions at 8416.5 and 16806.5 kHz.

Can someone recommend a portable antenna solution for 518 kHz? I need to be able to take it with me when I go camping.

Thanks again for any help you can provide.

Scott

>

It's been a long time since I thought about this, but if memory serves me correctly I don't think that a single layer is moving up and down. Instead, the sun spots are causing different layers to 'ionize' more or less, depending on the time of day. It's the change in ionization that effects propogation, either increasing the tendency to reflect the waves back down to earth or by increasing the layers' ability to 'carry' the waves a longer distance before sending them back down. Depending on which layers are effected, i.e., what altitudes, this determines what effect we see on our signals.

Someone else should doublecheck me on this, but that's the way I remember it.

Three layers I believe and at times the two lower layers combine to increase the absorption of radio signals, hence the broadcast band signals going away during daylight.. I believe the heights of the ionosphere varies from 30,000 to 60,000 feet or so. I recently attended a meeting where this very thing was the topic by the speaker.

Instead, the sun spots are causing different layers to 'ionize' more or less, depending on the time of day. It's the change in ionization that effects propogation, either increasing the tendency to reflect the waves back down to earth or by increasing the layers' ability to 'carry' the waves a longer distance before sending them back down. Depending on which layers are effected, i.e., what altitudes, this determines what effect we see on our signals.

Someone else should doublecheck me on this, but that's the way I remember it.

Kevin,

Your serial port cable may be defective and you can check each wire with an ohm meter. use two straight pins from your wife's sewing kit and two small alligator clip cords to check the continuity of each pin. RS-232 cables are 1 to 1 thru 9 to 9 or for the big ones, 25 to 25. I use a clamp or bench vise to hold the two connectors steady. A good ohm meter will have a beep tone indicating continuity so you don't have to look at the meter. Good luck,

Sincerely,

Robin Alexander NX6Z

Thanks for the info, Robin. It's a brand new cable, so I was holding off on "hardware" troubleshooting for the moment. I just learned from Alexander Anipkin that the FT-2000 uses the same command set as the FT-950, so I'l give that a try tonight. If that doesn't work. it's time to start messing with the cable.

Thanks again!

I found the FT 2000 a bit tricky with Vista. It did not like a USB to serial converter but works fine since I bought a serial card. I presume the 950 will be the same. Good luck.

Using the FT-2000 protocol did the trick. I can now control the FT-950 flawlessly. The DXSoft suite is now working quite well. Luckily, I'm not using Vista on this machine, so the USB problems were avoided. Thanks to all for your help!

4310. AALog Multi QSO edit?

Yahoo group: dxsoft
Date: 2009-06-30 00:57:52 UTC
From: M. Kevin Williams
Topic: 4310 Message: 4310

I can't get the Multi-QSO Edit to work in AALog. After I enter data in the field to modify and hit the Go! button, it tells me that I haven't selected any fields.

I'm using an unregistered version. Is this feature not activated until registered or is it just not developed yet?

Thanks for the Comment import fix, Alexander. Now I have my DXBase log in AALog (build 1122). All I have to do now is correct all of the Mode entries, from USB/LSB to SSB. The Multi-QSO edit feature will help me wih that-- now that I know the trick for using it (thanks to Sergei).

I'm looking forward to the English Help file and/or user manual when it becomes available. In the meantime, the DXSoft Yahoo! Group has ben very helpful.

Keep up the great work!

hello,

AAlog for 3.0.0.1113 Beta 3

a small question in the window cluster in AALOG3 can be added a tab for the band 6M?

best regards

73's Phil ON5KDX

4322. AALog 3.0 beta 1123

Yahoo group: dxsoft
Date: 2009-07-08 19:07:44 UTC
From: oceanbiz01
Topic: 4322 Message: 4322

Does anyone else have these 2 problems?

1) When new QSO is saved for a digi-mode like RTTY or PSK, the color sent to Bandmaster does not change from Red to Grey

2) When New QSO is saved, Bandmaster freezes up and cannot move the Bandmaster slider bar. It takes a long long time for Bandmaster to be useful again, maybe several minutes. This also happens when a new spot arrives from DX Cluster if you click on download spot. It also happens if you make some change in Bandmaster setup such as change Tools>Settings>Delete Spots Older Than ...

These problems do not happen in AALOg 2.47 with Bandmaster. Also, these problems do not happen if AAlog 3.0 is shut down and only Bandmaster running stand alone.

I have a similar problem with Bandmaster freezing. It is just exactly as you say when I save a qso it takes ages for Bandmaster to free up, I cannot get it to work again for a long time.

Regards

Bob GM4IKT

Dear Robert

Thanks. Alexander keeps telling me there is nothing wrong with the AAlog. It is something in my computer. Your computer is a UK version and mine is a USA version, so at least I know that it is not just my computer with the problem.

Please push Alexander to fix this, I am pushing him constantly. Do you also have the problem with digi modes not changing from red to black when New QSO is saved?

It is frustrating in a contest or multi band DXPedition to change frequencies on spot click from QSO to QSO, you have to wait long time to get to the next band for the DXPed or contest guy on another freq or band

4327. Azimuth in new qso box

Yahoo group: dxsoft
Date: 2009-07-19 04:11:35 UTC
From: Paul Beringer
Topic: 4327 Message: 4327

I'm using Version 3.0.0.1123.

Up until the latest update, I could always rely on the azimuth shown in the new qso dialog box. It's just below the callsign entry window. Regardless of the call area, the azimuth would show where the qth is relative to my qth. For example, suppose I work WA1XYZ. The callsign would indicate that he/she is on the east coast. I'm in the NW US and the heading is about 90 degrees. But WA1XYZ's QTH is actually in Los Angeles. The azimuth should show up as 165 degrees. But the heading shown on the screen is 85 degrees. Since I use a directional yagi antenna, it's helpful to know where to point my antenna, especially if the station is really weak. I use the QRZ database for lookups. Is this a glitch? I checked the Log manager to make sure my qth is correct regarding lat and long.

Hi Frend

When import contest log (adif,cabrillo) into the AAlog3
losing contes exchange from this one
it's a bug ?
it will be good to see into the edit window for call (field " notes")
contest exchange , important info for update the award list (district,prefectures,DOK's ,
..... and more)
Joe

Due VERY BAD callsign politic in the US it's imposible show right
direction without additional information. You can enter (or get
from QRZ.com) grid of WA1XYZ and AALog will display right direction.
Due QRZ.COM rules I can't automatically parse page for grid value, but
I must show QRZ.COM page to you.

Best regards,
Alexander mailto:aia@...

Dear dxsoft users,

I just upload new version of AALOG. It has not time limitation for
registered user and 45 trial period for other.
?? ????? ????? ?????? 45 ????.
If you are registerd user of AALog just drop message to
aalog@... and you will receive new key for free.

www.dxsoft.com/aal3-upd.zip update from previouse AALog 3 versions
www.dxsoft.com/aal3.zip full package

+ you can download only new confirmation from eQSL.cc (set date of the
last download)
- in the Global edit window Enter for confirmation date in field no
more necessary
+ AALog load LoTW and eQSL.cc rjyabhvfnbjy for LOGSET not only current
log
+ In the Global Edit window to clear field in the log enter "--"
(double minus)
- Problem in Write log mode if used two times for qso
- Error search in RAC
- Import error from ADIF for field MyQTH

Best regards,
Alexander mailto:aia@...

Alex,

Upgraded to 1124 and it has the same problem I described in 1123. When entering a callsign in the new window field, the Name and QTH does not get filled in, although the callsign field changed to red, and the previous qso window shows the previous qso's as expected.

Because it is in my laptop and I cannot get on line in order to send it to my EMachine. Time Warner CABLE CO.wants a name and password on my DSL modem. That is not supposed to be that way. Now I will try to figure out how to install the key, again! I don't know, it finally works out, but something good happens. How are things going over there? I listen to Ukraine R. when ever I get a chance, in English of course. Nevertheless, they play good music on some of the other programs.

Thanks,

Hello kc5yre,

Tuesday, August 4, 2009, 4:53:21 AM, you wrote:

kao> Because it is in my laptop and I cannot get on line in order to send it to
kao> my EMachine.

You are kidding?

Save a message with reg-code to a text file and move it to another computer
by floppy disk/CD disk/USB flash etc.

Then open text file by Notepad and copy/paste reg-code.

4345. AALog pwr field

Yahoo group: dxsoft
Date: 2009-08-05 04:12:43 UTC
From: Paul Beringer
Topic: 4345 Message: 4345

I've noticed that when you fill out the power field in the "more" tab while recording qso's, it stays the same on succeeding qso's. I don't always use the same power on all qso's. I'm wondering if there is a reason for that. It may be that the author assumes that when making contacts, most hams will use the same level. I don't. I often switch between qrp levels and a kilowatt and in-between depending on the necessity of the moment. Maybe I'm not a "common" ham. Hi hi. I may have to make a mental note to check this field on each contact.

4348. TrueTTY 2.76 is released

Yahoo group: dxsoft
Date: 2009-08-11 10:29:27 UTC
From: Sergei Podstrigailo
Topic: 4348 Message: 4348

Hello All,

I just have uploaded TrueTTY 2.76 to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.hamport.com/truettyb.zip

Now you can use it in EPC Russia DX Contest 22/23 August 2009 :

http://eu.srars.org/index.php?option=com_content&task=view&id=131&Itemid=96

--
Best regards,
Sergei

==========
TrueTTY Versions History

V2.76
QPSK-63 mode receiving and transmitting were made.
V2.75
Option "Use mouse wheel for tuning" was made.
A bug was fixed - "Help/Contents" menu didn't work in V2.70.
V2.70
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
/S parameter of command line is not used now.
V2.60
BPSK-125 mode receiving and transmitting were made.
TrueTTY can cooperate with another software as COM-server
(ActiveX object) now.
V2.57
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Beacon regulator defines not period, but pause between transmissions now.
V2.56
Minor improvements of RX window text displaying were made.
New options were made:
"Setup / Other / Do not strip received NIL symbols from capture file
and exchange channels";
"Setup / Other / Put time marks to a capture file";
"Setup / MOX & Beacon / Beacon off if my callsign ... is received";
"Setup / MOX & Beacon / Beacon off if any callsign is received twice";
Some options were moved from the "Setup->Interface" page to
the "Setup->MOX & Beacon".

V2.55
Documentation was updated.
W1GEE PTT-interface is supported in LPT/N6TR mode now.
[...]

4349. Integrating cw type and cw get into AAlog version 3

Yahoo group: dxsoft
Date: 2009-08-11 13:31:11 UTC
From: Paul Beringer
Topic: 4349 Message: 4349

I seem to remember in aalog 2.47 that both cwtype and cwget would interact with the logging program. I have version 3.0.0.1124 and can't seem to get it to work with these cw programs. Wonder if I'm missing something. I see in the "Config|options|external programs" choices, there is a check mark for CWtype but no checkmark for CWget.

Here's what I do. I open both programs and have the logging entry window open. I can see the decoded signals in the cwget pane. So I double click on the callsign and expect it to show up in the cwtype callsign window and also in the aalog entry window. None of this happens.

I would appreciate some help.

Tnx

Paul NG7Z

4354. Win32/Induc

Yahoo group: dxsoft
Date: 2009-08-21 13:36:28 UTC
From: n3gj
Topic: 4354 Message: 4354

Hi all!

Is anyone having trouble in the past day or two trying to
start AAlog? I tried to open AALog last night and my AVG antivirus
is refusing to load AALog3.exe saying it is infected with something
called Win32/Induc.

I tried a complete uninstall and reload of both AALog Ver 3 1123 and 1124 but each time the anti-virus flags the .exe file and
will not load it.

Apparently this virus was just discovered on 19-Aug
and has something to do with programs written using a Delphi compiler.

Anyone else see this yet or is it just me :-)

http://www.dxsoft.com/cwtypeb.zip
http://www.hamport.com/cwtypeb.zip

--
Best regards,
Sergei

==========

CwType Versions History

V1.80
"_" sybmol is used as "short space" now.
Macroses `[rg1] , `[rg2] , `[rgs] , `[rgr] were made for SO2R support.
V1.78
Some problems of co-operating with AALog 3.0 were fixed.
An option "Setup / Interface / MOX & Paddle / Paddle with Dash/Dot memory" was made.
So paddle can be used in three modes now:
- Ordinary mode;
- Iambic mode with Dash/Dot memory;
- Iambic mode without Dash/Dot memory.
V1.77
Paddle can be connected to COM-port (and USB/COM converter) now.
V1.75
CwType can work together with AALog 3.0 now.
V1.70
CwType can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.

Yahoo group: dxsoft
Date: 2009-09-04 12:11:44 UTC
From: Paul Beringer
Topic: 4367 Message: 4367

I regularly upload my log to LOTW. I also download LOTW reports. Ver 3.0 marks the "Uploaded to LOTW" checkbox only when a corresponding LOTW confirmed contact is made. This is fine. What I'd like to see is a way to do a multi edit of my log qsos to show that they have been uploaded to LOTW. The choices given to us in multi qso edit for the LOTW field doesn't have "uploaded to LOTW" choice. In the dropdown choices there is only

"None"
"Sent/not received"
"Complete"

There should be another choice of "Sent"

4368. AALog 2.47 / 3.0

Yahoo group: dxsoft
Date: 2009-09-07 19:42:25 UTC
From: belleville62220
Topic: 4368 Message: 4368

Greetings.

I have been attempting to transfer my logbook, aalog 2.47 from one computer to another, to make sure I have a backup, should my main computer fail. I am having an issue.

This computer will install the logging software, and will even acknowledge that the copy is registered to me after I copy the registration entry to the program file. Even after moving the registration entry has been moved over however, the program still refuses to allow for the import or export of the log; it acts as though the copy of the program is unregistered.

I have also installed aalog 3.0, which allows me to import the log, but it does not allow me to use the same registration code, so I am assuming that I must pay to activate 3.0, if I so choose.

Ideas, gentlemen?

73,
Jim Stoeber, wi9x

Dear Jim,
I do not understand what a problem you face.
As far as I know, you do not have to pay for 3.0 license - if you are a registered user of the 2.47 version. That's it!
In my case, I am using three desk-top PCs - a main one in my shack - for day-to-day on-air activities; second one - in my work office - for "job-free time" games with LOTW/WFF/...; and the third one - my son's PC - just as a back-up storage.
What I've done (in general):
1. Installed 2.47 onto all PCs, placing my "registration key" into relevant folder.
2. Installed 3.0 onto all PCs, placing the same "registration key" into relevant (for 3.0 version) folder.
3. Transferred my logs using "Convert log from ver. 2 to ver. 3" feature.
Then the same was done with my lap-top - just in case.
Perhaps, it looks like an extensive way, but it really works without any problems.
Regards and good luck!
73! Bek, EX8AB

PS. By the way, the "Convert log from ver. 2 to ver. 3" feature works if BOTH loggers are installed onto ONE computer you are working on. And this feature will transfer/convert your old logs from 2.47's "body" into 3.0's one. May be this is a "seed"...

The register key for ver. 3,0 is not the same as for ver. 2.47. Ask the new key.

Dear Jim,
I do not understand what a problem you face.
As far as I know, you do not have to pay for 3.0 license - if you are a registered user of the 2.47 version. That's it!
In my case, I am using three desk-top PCs - a main one in my shack - for day-to-day on-air activities; second one - in my work office - for "job-free time" games with LOTW/WFF/...; and the third one - my son's PC - just as a back-up storage.
What I've done (in general):
1. Installed 2.47 onto all PCs, placing my "registration key" into relevant folder.
2. Installed 3.0 onto all PCs, placing the same "registration key" into relevant (for 3.0 version) folder.
3. Transferred my logs using "Convert log from ver. 2 to ver. 3" feature.
Then the same was done with my lap-top - just in case.
Perhaps, it looks like an extensive way, but it really works without any problems.
Regards and good luck!
73! Bek, EX8AB

PS. By the way, the "Convert log from ver. 2 to ver. 3" feature works if BOTH loggers are installed onto ONE computer you are working on. And this feature will transfer/convert your old logs from 2.47's "body" into 3.0's one. May be this is a "seed"...

I guess registery key depends on what version you are using. Version build AAlog3 RC 3.0.0.1124 and later needs new registery key not sure.

Here is the issue. If you have an unregistered copy of 2.47, you will not have access to certain functions, such as importing & exporting logs, or printing the log, plus other features. They are disabled.

With this version, it recognized that the program is registered to me, but it does not enable the import / export, the print function, or the others that comes with registration.

4375. Glitch in 30M freq

Yahoo group: dxsoft
Date: 2009-09-09 23:32:16 UTC
From: Paul Beringer
Topic: 4375 Message: 4375

I was using a log analysis tool that uses an adif file for its source. While doing the import, it caught an error in the freq AAlog uses for 30M which is 10.000. I did a filter for all 800 30M contacts in my log and attempted a multiqso edit to change the freq to 10.100.00 and AAlog rejected the change. So I changed it to 10.110.00 and still it rejected it. The error message says "Wrong freq value (MUST be in Megaherz)! Ignored!" Last time I checked, 10.100.00 was the bottom of 30M.

Hello Sir
 I am thankfull for yor free assistance .
 till yesterday i could not use your CWGet
 however now i am wise enuhg to use it.
  Sir still your assistance
  I am developing a little orojectat college
i want to demonstrate How realy morse convert sgnals in to alphabets
 Your CWget works perfectly alrigt .
 but i want learn and explin very basics of morse.
can you pl help me

 i want following
 1. using coice card i want to receive morse signals in a vb6 form .
 2. serial using com port i want to receive morse signals in a vb6 form .
 3. after recieving the morse in text box of vb6 i want to convert it into alphabets my self .
 4 . also if possible send me pin connections to connect signal input on com port.
  5. i want to use a pre recorded signal and connect a radios output to computer

            hoping for the reply soon

I think 10MHz, could be written 10,000,000Hz, and accordingly 10.110MHz or 10,110,000Hz. I think it is a matter of the comma

I have AAlog configured for a freq format of xx.xxx.xx. This can be found in the "Config" dropdown list and click on "Options" choice. You can also click on the gear icon on the main log page and get to the same dialog box.

Topic: 4381 Message: 4381

Dear dxsoft users,

www.dxsoft.com/aal3-upd.zip - update from previous builds of AALog 3
www.dxsoft.com/aal3.zip - Full package

+ Load LoTW confirmations directly from LoTW web-server
+ New statistic view for New QSO sub-windows
- Not changed date at 00:00 in New QSO windjw
- If you edit QSO from another log then picture not saved
- fixed QRZ.COM interface
- ADIF import system decimal delimeter independent now.
- fixed Cabrillo import
- problem for wold-wide Awards wich using USER_Award field
+ Increased speed for exchange data with BandMaster;
+ Quick search in main window: ?trl+F do not clear previous search;
+ Cluster windoe: press Ctrl and double click on spot - callsign will
be copied into New QSO, but will not changed freq and mode of TRX;
- fixed lost of interface settings

Best regards,
Alexander mailto:aia@...

Locator Informations from AALog not displayed on DXAtlas Map.
Call changed but position is country default.
AALog 2.47 an DXAtlas 2.25 works fine.
Any recommendation ? Thanks.
Regards
Hans , DC2OD

Hi Sergei, the problem occurred when I set the input sound card from default to microHam microKeyerII sound card. The error message was, "Device Open Error--Attempt to open with unsupported waverform-audio format". I shut down and restarted the MKII router, problem persisted. I then did shut down of the computer and restarted. Problem persisted.

I was unable to find a problem with sound cards, sounds or audio devices. I reinstalled CWGet, and found the same problem. Last night I did a disk cleanup, and a disk defragment (not needed but I did it anyway), and then did a warm boot. I restarted CWGet, and it now works FB. No error report. I did another cold reboot, and CWGet continues to work properly.

Thanks for the reply.

4392. Hamcall lookup

Yahoo group: dxsoft
Date: 2009-10-16 01:10:19 UTC
From: Paul Beringer
Topic: 4392 Message: 4392

I have been using the internet lookup function with great success from the new qso window. However, just recently, the hamcall lookup keeps returning "no information found". I have a current password and I can successfully update the hamcall database on my computer. My license doesn't expire until December. I'm wondering if hamcall.net has changed their external lookup access like qrz.com did a couple of months ago.

There are two programs you can download for free;cwtype & cwget(they will both interface with your radio). do a search for both and happy cw the "NOT ENOUGH BRAINS TO LEARN CW" way.Most every one isn't handicapped like that,so if you can learn,please don't take the easy way out,it is much more useful in an emergency to actually know Morse code,73 KD7NFO

4405. DXCC anomaly

Yahoo group: dxsoft
Date: 2009-11-02 23:27:14 UTC
From: Paul Beringer
Topic: 4405 Message: 4405

When entering a call in the log entry dialogue, there is a notice at the bottom of the box which shows if the call/entity is needed for different awards. It is a very handy thing. However, I noticed that it doesn't seem to always be accurate. I have worked LU5OM on many bands and he uses LOTW. All the contacts are confirmed thru LOTW. I heard him the other day on 17M and entered the call and the noticed that the message at the bottom showed that he was not confirmed on 17M. I brought up the previous contacts window and it clearly shows that I have him confirmed thru LOTW. I was using CW and the mode field showed CW. The band field was 17M. I use radio control for these fields.
I need to be able to trust what AAlog tells me about my DXCC band/mode status regarding entities. This discrepancy is very disturbing.

Hello
Has anyone had luck in interfacing Skype audio with CwGet?

I use several different software application to remotely control ham transceivers, and all use Skype for audio (including for reception of cw). I've tried (with no luck so far) to get CwGet to read the cw audio.

thanks es 73

4410. SeaTTY - Hook - up diagram

Yahoo group: dxsoft
Date: 2009-11-16 06:48:13 UTC
From: Peter Cohn
Topic: 4410 Message: 4410

I have investigated the homepage on the program - and it looks interesting but I have some questions:
It specifies that you need only a receiver and a computer - I suppose that the receiver - is this The VHF radio ??
Do you have a hook - up diagram with components and interconnections ?
Is it possible to use SeaTTY to receive NAUTEX in Denmark?
To use the program - is it then possible to make " a setup" which automatically" shovet weather report and map ?

Med venlig hilsen / Kind regards

4411. RE: [dxsoft] SeaTTY - Hook - up diagram

Yahoo group: dxsoft
Date: 2009-11-16 18:02:10 UTC
From: Henrik Thiil Nielsen
Topic: 4410 Message: 4411

Hello Peter

There is no need for a hook up diagram. You just use the audio output from your receiver, typically from the phones socket, and route it into your PC via the line-in input of your pc's sound card. There are plenty of NAVTEX weather reports, but the only way to get a map in SeaTTY is to receive one via weather fax. I am not sure if Meteorologisk Institut here in DK still runs such a service.

From: bob.blodge@btopenworld.com
Topic: 4410 Message: 4412

I have been using SeaTTY for a few years and find it extremely good.
The " Receiver " that you need is a Short-Wave HF set, not VHF.

Yes, you will get very good results with NAVTEX on 518 KHz, here
in the south of England I receive Norway, Sweden and Denmark regularly.

The only " Hook-up2 that you need is a screemed lead from the Line
Output (Audio out) from you receiver into the " Line Input " on your
soundcard.

You will be able to receive the reports from varios weather station and
weather ships amnd weather maps from a few special stations.

It is a complex program but has a very good " Help " section.

I hope this helps

Kind Regards

Bob Groom

Hello Peter and Henrik,

I just like to add that the HF-Fax services of the German DWD (at 3855 kHz) and the British FWOC (at 4610 kHz) work pretty good in my location, around 200km south of Hamburg. The DWD offers RTTY services too. I think I remember there was a webpage which contained schedules of the dwd and fwoc services. Just can`t remember where I saw it, but I may look it up again if there is some interest.

Hello Donald,

Oh yes, I also get a good strong signal from DWD, both RTTY and FAX, here in Copenhagen. My old PC crashed so I don't have my frequency lists to hand right now, but I would be glad to look up the frequrncies in Klingenfuss if anybody needs it. I think the RTTY is transmitted pretty much around the clock.

Regards

Henrik

4415. problem with Sea TTY auto start

Yahoo group: dxsoft
Date: 2009-11-22 18:04:50 UTC
From: sailormantx
Topic: 4415 Message: 4415

Is there more adjustments to the auto start feature for receiving HF Fax? Have all sensitivity (s) turned up to 50, and it still will not work. also stops randomly, getting pictures saved only with a few lines on them. status bar shows false api signal ignored frequently.
Also find that I have have to reset the edge of the picture with each new start.

Any suggestions?

Thanks, Dave

Yahoo group: dxsoft
Date: 2009-11-28 19:01:28 UTC
From: sailormantx
Topic: 4422 Message: 4422

Turned auto stop to 1, works mostly; having trouble with auto start "ignoring false apt tone". It worked perfectly in the gulf of mexico with a strong signal. here in Virginia signal is making usable but not clear pictures; I am beginning to think that the stop/start issues may be related to the less than optimum signal I am receiving here.

Dave

Hi All,

I've been using the prog for some years. (Mainly in the Med) I find for good HF fax reception I must tune off freq to a high-pitched audio tone. The auto start/stop works well.

For general info and DWD schedules Frank usually has all at: http://weather.mailasail.com/Franks-Weather/Marine-Weather-Forecasts-Mediterranean-Adriatic#rtty

Cheers.

Hello,

There are a few hard programs out there like MixW (witch cost money).
Ham Radio Deluxe is another that is free. If you want the best SSTV
program go MMSTV, it is the easiest to use. Just use your search
engine on the Internet to find them.

Thanks for the tip; starting on frequency then fine tuning so the peak is at the far right between the red lines and the pictures were much improved, nearly perfect.

Dear Alexander.

I think that either the AALog.GDB or maybe the .INI file is corrupted.

The computer automatically shuts down at different times, sometimes when AALog is loading, sometimes in the middle of operation, sometimes later.

This PC shutdown and restart only happens when I run AALog, NOT in other software.

PLEASE HELP ME !!! CAN YOU EXAMINE MY AALOG.GDB for some kind of ewrror? Or the INI file?

4434. AAlog addition

Yahoo group: dxsoft
Date: 2009-12-07 02:40:15 UTC
From: ng7z
Topic: 4434 Message: 4434

A nice feature to include in AAlog would be an interface to rotor control. Although AAtest is a fine program, I prefer N1MM. In that program, you can hit "ALT-J" and my Green Heron controller will travel to the azimuth shown. Any rotor controller that can use a serial port (or USB) could be used. True, this is a lazy man's way of turning your antenna but a nice bonus.
BTW, any further word on the LOTW glitch in the "Awards" section of AAlog? I posted a note about this with a response from Alex that the problem may be LoTW confirmation.
73 Paul NG7Z

4435. Telnet oddity

Yahoo group: dxsoft
Date: 2009-12-07 02:50:34 UTC
From: ng7z
Topic: 4435 Message: 4435

When I double click on a callsign in "Cluster monitor" my radio changes frequency as expected and to the mode as shown in the "Band Plan". However, the narrow CW filter comes on also when double clicking on a CW spot. If I've changed from one CW spot with my wide filter engaged to another CW spot, the narrow filter is engaged. Wonder why this happens? I'm using an Icom Pro3.

4436. Re: Re[2]: [dxsoft] AAlog 3 Build 1128 URGENT URGENT URGENT

Yahoo group: dxsoft
Date: 2009-12-07 15:00:23 UTC
From: Dan Schaaf
Topic: 4430 Message: 4436

Dear Alexander,

I have done a Full Install of AALog3 v1128 on the new HDD C:
I set the Config/Options/External Programs as follows:
Use CWType (When Relevant Mode is selected)
Use True TTY (When Relevant Mode is selected)

When I start AAlog3 sometimes it loads OK, sometimes when loading, it will shut down the PC and reboot automatically.
Sometimes it loads OK, but some minutes or 1 hour later, the PC shuts down and re-boots automatically.

NOW, I changed as follows:
I set the Config/Options/External Programs as follows:
DO NOT Use CWType (I will start it manually) box unchecked
DO NOT Use True TTY (I will start it manually) box unchecked

Now AALog3 is OK.
PC does not sut down and reboot.
I can manually select CW Type or TrueTTY and no problems.

Only one software can be run and the other closed (CWType or TrueTTY, not both)

The attacjed files are pictures of the setup in CWType and TrueTTY.

Do these look correct?
Is there some kind of special Windows setup for COM1 port in Windows XP ???

4437. CwType 1.85 is released

Yahoo group: dxsoft
Date: 2009-12-08 12:18:02 UTC
From: Sergei Podstrigailo
Topic: 4437 Message: 4437

Hello All,

I have uploaded CwType 1.85 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

--
Best regards,
Sergei

==========

CwType Versions History

V1.85
Documentation was updated.
V1.80
"_" symbol is used as "short space" now.
Macroses `[rg1] , `[rg2] , `[rgs] , `[rgr] were made for SO2R support.
V1.78
Some problems of co-operating with AALog 3.0 were fixed.
An option "Setup / Interface / MOX & Paddle / Paddle with Dash/Dot memory" was made.
So paddle can be used in three modes now:
- Ordinary mode;
- Iambic mode with Dash/Dot memory;
- Iambic mode without Dash/Dot memory.
V1.77
Paddle can be connected to COM-port (and USB/COM converter) now.
V1.75
CwType can work together with AALog 3.0 now.
V1.70
CwType can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
[...]

Serge,

version 1.80 and ver 1.85 are locking up once in a while. Usually happens
when inserting text in the middle of the TX pre sent buffer. ver 1.75 works
okay.

4441. CWget newbie question

Yahoo group: dxsoft
Date: 2009-12-20 20:11:30 UTC
From: Brent G DeWitt
Topic: 4441 Message: 4441

I just started using CWget with my 40 meter Rock-Mite. Listening with headphones, it appears the audio filtering happens on only one channel of the audio out with the other passed through unfiltered. Is this the expected behavior?

Thanks!

Brent

I am afraid that I didn't quite understood you,
but CwGet uses soundcard in "mono" mode (a single input channel).

I figured out the reason things seem strange (I think). The right and left channels of the stereo line-in cable I'm using are commoned in the RockMite, so I'm putting audio on both channels. The sound card appears to be passing the right channel audio straight through while the left channel is getting processed by the filters.

Nice program!

4447. CWtype setup to use SignaLink USB ?

Yahoo group: dxsoft
Date: 2009-12-26 09:23:17 UTC
From: Erik Nielsen
Topic: 4447 Message: 4447

I have SignaLink USB interface and is trying to setup CWtype to use that.
I don't seem to be able to connect to this kind of interface. I am running
Windows Viste Home Premium.

The SignaLink is connected to my radio - a Kenwood TS870 - via the 13-pin
data-connector.

Other programs seems to be able to connect.

The receiving side is working ok via CWGet
Can you give me some advice on how to setup CWtype ?

Subject: stopping using my key

Hi Segei,
It is getting worse for me operating my (Junker) key. About time perhaps to start talking morse language another way.
CwGet and CwType cab be used togerher I suppose. Do I also need an interface like the SignaLink? I hope not because what I heard is that one needs to change jumpers for every other rig one wants to use. I know many none code hams work CW using a computer like for other didah modes.
Would you be so kind as to inform me as being a new dxsoft user about th eins and outs.
Kind regards,
Rolf pa3gfw

You are kidding???
Do some software keying your rig by sound card ???

If you wish that CwType produce sound via soundcard, select this card at Setup/Sound page and press button with speaker image.

If you want keying your transceiver, you _probably_ need to select "COM-port (via Windows API)"
at Setup/Interface page and select virtual com-port of SignaLink and appropriate setting in "Key/PTT port pins".

Hi Sergei

The SignaLink USB unit has the soundcard built in and if used without a
direct keying it uses AFSK CW and and the PTT is activated on the 13-in
cable to the Data connector on my Kenwood TS870.
You can have a look at this web-page http://www.tigertronics.com

Has it software interface for PTT control or PTT is just activaited by
build-in VOX ?

Hi Sergei

It has software interface for activating the PTT as you shall not use VOX on
the radio.

Best regards

Hi Sergei

I don't know but inside the box I must set some jumpers to match my
tranceiver and the kind of connection,
whether I use the 13-pin to a data-connection or I use speaker/microphone
connection to the tranceiver.
The 3 jumpers are PTT, MIC and SPKR for the 13-pin

Best regards

4463. SV: [dxsoft] CWtype setup to use SignaLink USB ?

Yahoo group: dxsoft
Date: 2009-12-27 16:11:15 UTC
From: Arne Fast
Topic: 4447 Message: 4463

Hej Erik

Ved ikke om du har set denne notits

How do I operate "direct keyed" CW with the SignaLink - This is done by simply connecting the SignaLink's PTT and Ground lines to the "Key" and "Ground" lines of your radio's Key jack. One of our un-terminated radio cables can be used to make these connections. You will need to attach the appropriate plug for your radio's Key jack to this cable. Using our SLCABNC cable, we suggest attaching the white/orange wire to the tip of the plug, and the orange wire to the plug's body/sleeve. You will then need to install the SignaLink jumpers as follows; PTT to 1, and G (ground) to 2. Note that direct keyed CW is limited to about 25 WPM on Transmit (there is no limit on Receive), so if you need to transmit faster than this, you'll want to run AFSK CW.

4464. AATest - North American QSO Party

Yahoo group: dxsoft
Date: 2010-01-09 23:13:16 UTC
From: k5gzr
Topic: 4464 Message: 4464

I have had great success using AATest v.1.80 to log my contacts in several contests. But today I am having a problem logging North American QSO Party (CW) contacts. No matter what call I enter in the New QSO window, the call entry box turns red and the word "Dupe" appears in the error message box at the bottom of the New QSO window. The same condition occurs with each of the North American QSO Party contest choices (CW, PHONE, RTTY). What am I doing wrong? Rick - K5GZR

4466. CwType 1.86 is released

Yahoo group: dxsoft
Date: 2010-01-12 14:01:08 UTC
From: Sergei Podstrigailo
Topic: 4466 Message: 4466

Hello All,

I just have uploaded CwType 1.86 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

--
Best regards,
Sergei

CwType Versions History

V1.86
Vertical scrollbar in Sent window was made.
CwGet works more correctly at 64-bits systems now
(it not tries to load 32-bit driver no more).
V1.85
Documentation was updated.
V1.80
"_" symbol is used as "short space" now.
Macroses `[rg1] , `[rg2] , `[rgs] , `[rgr] were made for SO2R support.
V1.78
Some problems of co-operating with AALog 3.0 were fixed.
An option "Setup / Interface / MOX & Paddle / Paddle with Dash/Dot memory" was made.
So paddle can be used in three modes now:
- Ordinary mode;
- Iambic mode with Dash/Dot memory;
- Iambic mode without Dash/Dot memory.
V1.77
Paddle can be connected to COM-port (and USB/COM converter) now.
V1.75
CwType can work together with AALog 3.0 now.
V1.70
CwType can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
[...]

4469. Sensitivity of RTTY and MFSK16 software

Yahoo group: dxsoft
Date: 2010-01-22 18:13:44 UTC
From: warren18947
Topic: 4469 Message: 4469

Recently during a QSO a ham said the software I was using was not very sensitive. I decided I needed to collect some data to make an informed decision about which software I should be using. I ran several of the RTTY and MFSK16 software packages through the AWGN function of PathSim and used RttyCompare to calculate the percentage of errors in the resulting text. The data can be found at

http://www.wz7i.com

TrueTTY looked quite good in RTTY and amazed me in MFSK16.

This is not meant to be a polemical posting. I may well have made less than optimal choices in setting program parameters and I am anxious to receive suggestions about how the testing could be improved. Also, I am aware that sensitivity is only one factor in choosing what communications software to use.

Wes, WZ7I

4472. BUGS: AALog v 3.0 Build 1128

Yahoo group: dxsoft
Date: 2010-01-28 13:34:17 UTC
From: the_thaw_ottepel
Topic: 4472 Message: 4472

I have sent multiple emails in the last 6 months regarding 2 issues with aalog 3 that are not being addressed. The first is that Buckmaster Hamcall lookup does not work with v3.0 but is working with v2.47. The second issue is that DX Atlas home address does not stay due to how v3.0 starts DX Atlas program, but again works okay on v2.47. I am getting frustrated with only getting one response of support in six months, which informed me that they have not even loaded Buckmaster into their computers to test Buckmaster on aalog 3.0. I have been patient for well over six months and I will be forced to start to post negitive reviews on e-ham and other sites with this lack of concern for support and general courtesy if my emails and posts continue to be disregarded.

4475. Re: BUGS: AALog v 3.0 Build 1128

Yahoo group: dxsoft
Date: 2010-01-29 10:55:54 UTC
From: kd5gm@sbcglobal.net
Topic: 4472 Message: 4475

As I reported in a direct communication: My call sign look up function works with HAM CALL: BUT it only works as a lookup from the the HAMCALL website lookup and not from the HAMCALL that is on my C:\ .. When I entered the requested drive address and selected a lookup request from the available drop box for this function, the AALog.3 software wanted me to enter the passcode (the 6 numbers that came inside the CD disc box) and when I did this asnd selected" LOOK UP IN THE ENTERNET from the drop box from the NEW QSO page , then AALog.3 tagged the HAMCALL web lookup address as the place to get my lookup requests. When data is received from the HAMCALL website. then I can highlight and tag my needed information to the necessary QSO boxes as needed. Not to complain: but auto data entry to the QSO boxes would be very helpful. No negative posts from this OP. I purchased AALog.3 understnading that there may be issues. After all it takes an inventor and a user to perfect anything that man can conceive as useful. PS; QRZ works the same way except that one does not need to enter a passcode.
Thanks for the help Alexander,

Louis, KD5GM
CW ;-) The Original Digital

Hello Piet:

I'm sorry to say that I don't do any CW but if you are interested in voice I am on 20 meters quite often (14.262) and also CQ100 (any band). Let me know your call sign and I will watch for you.

Hello Neha,
I am an extra class (KG0BB) but I too started out as a novice. Was afraid to get on the radio starting out. contact some other hams locally if you can but most of all get some equipment and get on the air in the novice bands. also if there is a Amateur club join it Soon you will want to upgrade as you experience the fun of the hobby and the volunteer uses of ham radio, at least in the USA.

From: Robin Alexander
Topic: 4480 Message: 4487

Dear Neha,

Ham Radio help is available. May I share with you that I started with inexpensive equipment and I would be pleased to offer advice. But you will get the best help if you can find and join an amateur radio club. One of the members that lives near you may volunteer to be your "Elmer", a mentor and helper.

I started with a 2.5 watt CW transceiver and a simple antenna. You can do so also. You may wand to purchase inexpensive equipment from MFJ Enterprises. Check out www.mfjenterprises.com for the MFJ-9340W QRP Cub CW Transceiver. This is a very good super-hetrodyne receiver with a low power 2.2 watt transmitter. It costs $149.95 and requires a 13.8 Volt, 0.4 Amp power supply that runs on the AC mains. You will also need a telegraph key and headphones. Dipole antennas work well for local contacts but a vertical antenna will be better for long distance (DX) contacts. You can tie a rock to a fishing line or cord and throw it over a tree to pull up a wire antenna 33 feet (10 meters) long. Attach the coax feed line center to the wire and the shield to a water pipe or ground rod.

It is very rewarding to work stations far away. With less power than a pocket flashlight you can communicate with hams (amateur radio operators) many thousands of miles away.

If you have a Intel and Microsoft type computer, you can purchase and download software to make the computer your Morse code receiving device. The best software I would recommend is MRP40 version 61 which costs 49.90 Euro. It copy's Morse faster and better than I do. To some operators, CW is just like RTTY and other digital programs. Chatting is now easy for all who have a computer.

But do not be without hope, you can work the world with a telegraph key and earphones. My longest contact with CW and 2.5 watts was 7000 Miles (11,667 Kilometers) between Sacramento, California, USA and Gut Felsa, Hungary, Europe.

Best wishes for starting up as a ham operator.

Sincerely,

Rob, NX6Z

4488. CwGet 1.90 beta is published

Yahoo group: dxsoft
Date: 2010-02-01 15:34:36 UTC
From: Sergei Podstrigailo
Topic: 4488 Message: 4488

Hello All,

I just have uploaded CwGet 1.90 beta to the main site and mirror:

http://www.dxsoft.com/cwgetb.zip
http://www.hamport.com/cwgetb.zip

--
Best regards,
Sergei

==========

CwGet Versions History

V1.90
Most settings are being changed in the separate window now,
which is opened by the "Setup" menu.
"Main Filter", "Burst Filter" and "Sound Output" sub-menus are opened by the "Filters"
menu.
The "Multi-Channel decoder" command is moved into the "File" menu.
"Save Buffer" hotkey is Ctrl-S now.

Ctrl-F hotkey switches "Sound Output" state between "Sound Without Filtering"
and last selected filter (or "Sound Off" state, if it was selected last).
Multichannel-decoder font and background is defined separately from main
RX Window settings.

Auto-threshold process in the main and multi-channel decoder works better now.
Auto-threshold low limit can be defined manually if the
"Setup/Interface/Enable manual auto-threshold limit" option is selected.
This limit is used not as minimal value now, but as level of input noise.

The "Setup/Multi-decoder/Use manual auto-threshold limit from main decoder" option
enables using of user-defined limit in the multi-channel decoder.
V1.80
Options "Setup/Put Time Marks to a Capture File" and
"Setup/Use UTC Time" were made.
V1.70
The "Setup/Multi-Channel Decoder" command opens additional Multi-RX Window.
CwGet decodes up to five strongest signals in about 1600 Hz bandwidth and
shows them in this window. To reduce amount of "garbage" in this window an squelch is used.
Squelch threshold is shown by horizontal line in the Spectrogram window.
This threshold can be changed by mouse with "Shift" key pressed.
The "Setup/Enable Squelch in Main RX Window" option enables squelch in
main RX window also.
V1.65

CwGet can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
Some minor bugs were fixed.
V1.61
Values 10:1 and 20:1 was added into "Zoom" menu.
Method of detector threshold automatic calculation was
fully rewritten.
In "Auto Threshold" mode user can define minimal value of detector
threshold by click at oscillogram window. Two horizontal lines
show current detector threshold value and minimal threshold in
this mode.

4490. best way to upgrade from 2.47 to 3.0???

Yahoo group: dxsoft
Date: 2010-02-02 15:00:35 UTC
From: n0rq
Topic: 4490 Message: 4490

Hi. I've been a happy registered user of AALog 2.x for quite a while. I'm ready to upgrade to 3.0. I have the new key.

At the same time, I want to move my logs to a newer PC -- the old one is getting pretty old. What is the best way to do this? Install 2.47 on the new machine, copy the log files over, and then upgrade? Or just put 3.0 on the new machine?

I tried the 2nd method (install 3.0 on the new machine), but I didn't see a good or easy way to convert the old log files. Maybe I missed something.

Please let me know best way to do this, thank you!

73,
Dave N0RQ

4494. Re: best way to upgrade from 2.47 to 3.0???

Yahoo group: dxsoft
Date: 2010-02-03 14:20:14 UTC
From: n0rq
Topic: 4490 Message: 4494

Thank you. I got it to work! All 5 logs converted to 3.0.

Note to US hams: before migrating data, start 3.0, click on Config, click on Bands List, update 80m "end freq" from 3.8 to 4.0 -- otherwise, your 80m QSOs above 3.800 MHz will get flagged as errors and will not copy over. Also, fix any other errors (such as missing DX entity) in any QSOs in 2.47 before you migrate it to 3.0.

I'm playing with 3.0 now -- looks nice -- may post comments about it later...

4498. 3.0 filter question - callsign marker

Yahoo group: dxsoft
Date: 2010-02-04 14:01:27 UTC
From: n0rq
Topic: 4498 Message: 4498

Hi. I got 3.0 up and running -- looks nice!

One of the things I did in 2.47 was use the "mark this callsign" checkbox to flag QSOs that I wanted to go back and send QSL. I see that field in 3.0, but I see 2 problems:

1) the convert 2 to 3 does not seem to have carried forward that field -- the callsigns I had marked in 2.47 are no longer marked in 3.0

2) I don't see a FILTER field for "callsign marker" -- I see one for "QSO marker", but I don't use that one

3) I miss the little flag that was in the 2.47 main log window -- the little flag that was to the left of the callsign

Any way to get "callsign marker" back so I can filter on it? Thank you & 73,
Dave N0RQ

n> that field -- the callsigns I had marked in 2.47 are no longer
n> marked in 3.0
Callsigns marked in internal callbook. This util do not transfr it.
Well I think no problem to add copy callbook to 3.0 from 2.47

n> 2) I don't see a FILTER field for "callsign marker" -- I see
n> one for "QSO marker", but I don't use that one
ops. You are right. Will fix it

n> 3) I miss the little flag that was in the 2.47 main log window
n> -- the little flag that was to the left of the callsign
Hmm. Again you are right.

All this thingth I will fix in build 1130

n> Any way to get "callsign marker" back so I can filter on it? Thank you 73,
n> Dave N0RQ

Best regards,
Alexander mailto:aia@...

4504. Re: 3.0 filter question - callsign marker

Yahoo group: dxsoft
Date: 2010-02-04 22:00:28 UTC
From: n0rq
Topic: 4498 Message: 4504

I played with the MARK QSO & CALL fields a little more. If I edit a QSO and check either MARK QSO or MARK CALLSIGN, a checkmark shows up in the main log in the "MARK" column. However, a filter on QSO MARKER set only picks up the ones that have MARK QSO on, not MARK CALLSIGN on. In other words, it might be right to add the MARK CALLSIGN column in the main log window.

Thanks & 73,
Dave N0RQ

4507. 3.0: missing some DX entities in awards manager?

Yahoo group: dxsoft
Date: 2010-02-05 15:31:34 UTC
From: n0rq
Topic: 4507 Message: 4507

Hi. Looking in 3.0 (which is really nice!), I think there may be some DXCC entities missing in awards manager. I have not gone through all of them, but I noticed these:
CE0A
PJ5
ZK1/N
ZK1/S

Perhaps there is an easier way to compare the list in 2.47 and 3.0, instead of doing is manually. If so, great. Otherwise, someone might need to go through the entire list to see if any others are missing...

73, Dave N0RQ

Hi

AALog is listing 338 DXCC entities which is the correct number.
ZK1 has changed to E51 and they are on the list.
CE0A are recognized as Easter Island and also seen as CE0Y
PJ5 is belonging to the same DXCC entity as PJ7

4510. SeaTTY problem

Yahoo group: dxsoft
Date: 2010-02-05 22:34:58 UTC
From: Alan Gale
Topic: 4422 Message: 4510

Hi Sergei,

I have been using SeaTTY 2.32 to monitor NAVTEX on 4209.5 kHz recently, and I've noticed that despite setting the filter to ??##, the log entries just show the date and not the identifier. When switching to 490 and 518 though, all entries are shown in the following formats:

20:20:22 CE or 21:04:27 GA72

(with the messages folder showing them as:

\Messages\100204-202022-CE44.TXT;
\Messages\100204-210427-GA72.TXT;

the 4209.5 entries look like this though:

21:59:49
\Messages\100204-215949.TXT;

Is this normal, or does the program treat stations logged on 4 MHz in a different way to those on 490 and 518 kHz? I also tried this with an earlier version but the results was exactly the same.

The 4 MHz signals were almost perfect copy, with a clearly defined identifier which looks exactly like the ones used on 490 and 518:

ZCZC

MA96
291134 LMT OCAK 2010
ISTANBUL TURK RADYO

Any advice would be appreciated, I couldn't find any mention of this in the help file, so I don't know if this is just a problem on my pc. A screen dump of my interface is also attached to show how it appears there (if this list allows attachments that is)?

73 for now, Alan.

AG> Is this normal, or does the program treat stations logged on 4 MHz
AG> in a different way to those on 490 and 518 kHz?

Program know nothing about used frequency, it works with incoming text...

AG> I also tried this
AG> with an earlier version but the results was exactly the same.

AG> The 4 MHz signals were almost perfect copy, with a clearly defined

AG> ISTANBUL TURK RADYO

Hmm, I see that there is no ID at ZCZC string at all.
MA96 is located at _next_ string, not after ZCZC in _the_same_ string,
as SeaTTY looking for.

4513. 3.0: a few things I noticed

Yahoo group: dxsoft
Date: 2010-02-06 13:34:48 UTC
From: n0rq
Topic: 4513 Message: 4513

Thank you for explanation of the "missing" DX entities, which were really under a different prefix.

I have noticed a few small things in 3.0 -- perhaps it was designed this way, or perhaps they could be changed.

1) in top half of cluster window, when time changes from 23:59 to 00:00, the sorting gets mixed up (the 23:59 entries show up after/below the 00:00 entries)

2) in awards manager window, I click LOTW button to turn it on, but it doesn't remember that I turned it on -- after I close awards manager and open it again, LOTW is turned off -- would be nice if it stayed on

3) in new QSO window, I cannot edit frequency field

73, Dave N0RQ

Yes .... but I see a different version.

Next to Use TrueTTY it says 'Get it' and takes me to the url to download TrueTTY.

You must have a more recent version. The latest version I can get from DXSoft is the one I have loaded.

Having selected

Conf>Options>Ext programs,

The Properties dialogue box is different. Would you like a picture?

NC> The Properties dialogue box is different. Would you like a picture?

It is http://www.dxsoft.com/image/screenshot/aaconfig1.gif

AAlog is 3.0 Build 1129

Please show your screenshot (you can mail it to my personal address).

HI Sergei,

Cannot find AALog 3 1129 as a download.

DXSoft shows only build 1128

No point in sending jpeg of the screen since solution is the build you have is what I require.

Can you arrange of latest version to be available?

Nigel

1128 should work. But make sure that TrueTTY version is new enough...

AALog has the same code for all version.
After install TrueTTY create key in registry like
HKEY_LOCAL_MACHINE\SOFTWARE\Classes\TypeLib\{B7BAB429-E50A-4748-9B66-BB9275FBC43E}
AALog looking for this key. If it's not exist then AAlog can't run
truetty.
Try to reinstall TrueTTY. if you have Vista or Win7 then run
TrueTTY istallation via menu "Run as Administrator"

Best regards,
Alexander mailto:aia@...

I have re-installed AALog 3 1128 and TrueTTY. Both are the latest versions (which has always been the case).
I am now back to square one and the Conf>Options>External Prog dialogue box remains unchanged and nothing like the one Sergei sent me.
Since reloading all software, I find - as before - that opening AALog3 from the shortcut frequently results in the system hanging during the loading stage (initialisation error), but by starting up DXAtlas when this happens, AALog 3 will complete its loading and all is ok. Because of this I ALWAYS open DXAtlas first, and then AALog 3 works fine.

How do I create a key in registry as you suggest? Step by step instructions please!

Thanks for you help: Nigel

We found a problem fix.

You need to run TrueTTY "as admin" once.

Click by right mouse button at TrueTTY shortcut and select "Run as admin".
It will make TrueTTY to create needed registry data.

In next times run TrueTTY as usually.

Hi Sergei:

Fantastic.... your fix - 'right click on TrueTTY shortcut' and 'Run as Admin..' did the trick and a new new dialogue box appeared. I loaded the TrueTTY macros without any changes and now AALog 3 and TrueTTY work together really well.

Thank you for your patience.

Nigel

Dear Sergei,

The response from Bandmaster VE3NEA::

> Needed Lists from " both" Logging Program and from built-in lists.

In this mode, the spot is printed in grey if and only if the logging program instructs Band Master to do so. If it is still red, then Band Master did not receive such instruction from AALog3.

The way I do it is:
1) Install 3.0 into old computer
2) Run the Utility " Convert 2 to 3" from AALog3 folder
3) open 3.0 and perform all nececssary functions to display the logset
4) Install 3.0 on new computer
5) Copy AALOG.GDB (Log data file) from old PC to new PC (AALog3 folder)
6) Start AALog 3 on new PC.
7) Do necessary steps to display the log.

Dear Sergei

I just worked F5PEZ on 18.1015 PSK31. In Bandmaster, he is shown in Magenta color.
When I saved QSO in AALog3, Bandmaster callsign did not change from Magenta Color to Grey. It stayed as Magenta after I saved QSO.

I looked in Bandmaster Bandplan.ini, ARRL, and I see:

18068=CW Class E-A-G
18100=DIG(RTTY),CW Class E-A-G
18105=DIG(Packet),CW Class E-A-G
18110=PH,CW Class E-A-G
18168=END

This looks correct to me? is it really correct?
In my AALog3, the QSO is saved and logged properly.
Is this a problem in Bandmaster or in AALog?

4547. CwType 1.90 beta (with WinKey support) is published!

Yahoo group: dxsoft
Date: 2010-02-17 19:20:42 UTC
From: Sergei Podstrigailo
Topic: 4547 Message: 4547

Hello All,

I just have uploaded CwType 1.90 beta to the main site and mirror:

http://www.dxsoft.com/cwtypeb.zip
http://www.hamport.com/cwtypeb.zip

Beacon regulator defines not period, but pause between transmissions now.

Some improvements of speed changing macroses handling were made.

WinKey interface is supported now.

Take to attention, that PTT Lead-in and PTT Tail of WinKey are defined by settings "Setup/MOX & Paddle/Tx On at paddle press with keying delay, ms..." (PTT Lead-in) and "Setup/MOX & Paddle/TX Off at silence, dots..." (PTT Tail).

4548. New member with question about SEATTY

Yahoo group: dxsoft
Date: 2010-02-18 14:31:26 UTC
From: redflasher
Topic: 4548 Message: 4548

I am a new member using SEATTY. My question is concerning setup for fax reception. There are settings for sensitivity for start up, stop, and res tart. Does a higher number mean more sensitivity or does a lower number? I have trouble with drop outs even with a good signal from my Icom R75. Playing with the numbers doesn't seem to help. The software often does not auto start even with a booming signal.

Thanks

Bob in Minnesota KB0XR

4549. CwType 1.91 beta is published

Topic: 4549 Message: 4549

Hello All,

I just have uploaded CwType 1.91 beta to the main site and mirror:

http://www.dxsoft.com/cwtypeb.zip
http://www.hamport.com/cwtypeb.zip

--
Best regards,
Sergei

==========

CwType Versions History

V1.91
MOX settings works with WinKey now.
Maximal COM-port number is COM25 now.
V1.90
Beacon regulator defines not period, but pause between transmissions now.
Some improvements of speed changing macroses handling were made.
WinKey interface is supported now.
V1.86
Vertical scrollbar in Sent window was made.
CwGet works more correctly at 64-bits systems now
(it not tries to load 32-bit driver no more).
V1.85
Documentation was updated.
V1.80
"_" symbol is used as "short space" now.
Macroses `[rg1] , `[rg2] , `[rgs] , `[rgr] were made for SO2R support.

Dear Sergei

I installed 1.91 and there is a problem
It always starts up with 60 in the Sp: box.
I change it to 150.
I click Setup/Apply Then Save
It returns to 60
This is a new problem. It did not happen with previous versions.
Can you fix it? It is a headache.

DS> This is a new problem. It did not happen with previous versions.
DS> Can you fix it? It is a headache.

Ops!

This bug occurs if you save setting with speaker button ON.

Thanks for your report!

Will be fixed.

For workaround - switch speaker button OFF before settings saving...

Sergei
Speaker off now.
If I change SP by mouse up/dn arrows, yes, now it is saved.
However, If I use keyboard to change Speed, it will not save.

4556. CwType 1.92 beta is published.

Yahoo group: dxsoft
Date: 2010-02-27 09:24:47 UTC
From: Sergei Podstrigailo
Topic: 4556 Message: 4556

Hello All,

I just have uploaded CwType 1.92 beta to the main site and mirror:

http://www.dxsoft.com/cwtypeb.zip
http://www.hamport.com/cwtypeb.zip

A bug with manipulation speed saving was fixed.

--
Best regards,
Sergei

Dear Sergei

There still remains a problem:
If I change Sp: with mouse using up/dn buttons, I can succesfully save the setting.
However, if I change the Sp: using my keyboard, I can change the Sp: but I cannot save the setting. After Apply/Save the number is SP: goes back to previous value.
Does not matter Speaker on or off, same results.
This was NOT a problem in previous versions.

You need press Enter or move cursor to another window to really change speed...

4560. LOTW

Yahoo group: dxsoft
Date: 2010-03-04 05:01:53 UTC
From: Paul Beringer
Topic: 4560 Message: 4560

I think I've mentioned this before but AAlog version 3.0 build 1128 doesn't report confirmation of LOTW in the new qso window. For example, when I enter a callsign, the status bar on the bottom shows whether I need the entity for DXCC band and mode. I always have the previous QSO view open so I know if I worked him or not. In all cases, when the status bar shows I need a particular entity for DXCC, the previous QSO view clearly shows that I have the callsign/entity confirmed via LOTW. Is this a bug? The same problem exists for other awards confirmed via LOTW.

RH> Where can I find a description of this error?

It means that CwGet can't open selected soundcard in "16bit - mono - 11025 samples/sec"
mode.

Perhaps for invalid soundcard driver...

Check if you really selected this soundcard in CwGet settings.

Soundcard number can be changed in system...

From: Richard Hill
Topic: 4561 Message: 4566

Hi Sergei, that was the first thing I checked. I found that when the microKeyerII was selected, I get the error message and a single screen, but when I switch to the computer sound card I get 2 windows and all appears normal, but of course I don't get any CW signal coming through. It did work properly just prior to changing radios.

Everything seems to be working properly with Logger32 and N1MM.

Undoubtedly my error somewhere, but I have not found it yet. I'm still working to learn code, and CWGet has been very useful for learning to hear and learning to send. I can't live without it <grin>.

Thanks.

Do you have this problem with paddle only, not with keyboard?

Do you use sidetone control via sound card?

--
Best regards,
Sergei

4573. Re: CWType 1.86 and bevore; dots/dashes from paddle

Topic: 4570 Message: 4573

Many thanks, OM Sergei,

for the answer.
I have the problem paddle only with this. Keybord and macro work correctly.
The connection is realized according to your circuit diagrams. There is the same result with LPT port or with COM port. (Your circuit diagrams "The simplest circuit diagram for LPT-port" and " More complex, but more correct schematics +9V / -9V for COM-Port "
I have checked the signal expense with the oscilloscope and recognized the fault.
One can hear this also with the sidetone or the PC - speaker.

Best regards,
Norbert, dl7nbm

Hello TU, OM Sergei,

I was checked the signal output with the oscilloscope on the KEY-IN Pin of the interface (KEY-IN for TRX). The dots are pressed on the paddle for longer time. The output was about this:
----------_-_--------------_-_--- ("-" = dot; "_" = break)
Sometimes for example is it not possible for 73 producing correct dots.
Excuse for my bad one English.

Best regards,
Norbert, dl7nbm

This problem persists with switched transmitter off also?

I mean can we explain it by RF interference or not?

Hello, and TNX Sergei,

yes, it persists with switched transmitter off also!
I think it is a little better if the priority is prepared for real time at the computer.
Can it be the influence of an Interrupt?

Best regards,
Norbert, dl7nbm

Paddle and keying are handled in multimedia timer events.
I think problem can be if some another program busy processor for long time...

From: jackschmidling
Topic: 4580 Message: 4580

This runs out of the box on my Dell lap top but does not work on the computer I want to use it on.

The PTT works but I can not get any audio out. This is an HP tower with internal sound card and external Soundblaster USB and VAC. Nothing I have tried gets sound out on this computer. Both are running EXP.

I just registered it as I can use it with the Dell but not my preference.

I presume the inability to save macros has something to do with registration?

What are the green bars after the line out supposed to mean?

Thanks,

Jack K9ACT

AAVoice can use default system soundcard only. What is the default
sound card in the system?

j> I just registered it as I can use it with the Dell but not my preference.

j> I presume the inability to save macros has something to do with registration?

j> What are the green bars after the line out supposed to mean?
This is sound level indicator. But not all Sound card support this
feature.

4584. Re: AAvoice questions

Yahoo group: dxsoft
Date: 2010-03-23 05:08:41 UTC
From: jackschmidling
Topic: 4580 Message: 4584

I still can not get any audio out of the HP sound card. When I click on any of the wave files in the folder, the media player immediately plays them so it is not a sound card problem.

On the laptop in which the program runs, I have another problem that is rather maddening.

When I click on F1 to send my CQ, nothing I can do will stop i. Pause, escape, Microphone, stop.... nothing. It just runs till it's done.

This is a pain if an accident or a real problem if something goes wrong and I have to QRT.

I guess I can't post pics here so I sent a screen shot of the Macro edit page to http://schmidling.com/aavmac.jpg the top line is my CQ msg.

If I try to stop it I get a not responding message but it's not a real crash if I let it run out then.

What could cause this? The message is very long. Is there a limit on file size?

Stopping the transmmission is the problem with newer version. Use older vesion you can stop transmission when you want.

That seems a strange solution to a problem. How do I get the correct version and what do I lose?

When is this bug going to be fixed?

Jack

Yes that is the strange solution.

I talked about that problem with Alexander but he is not interested in Aavoice anymore.

There are those two problem you can use only default sound card and you can't stop transmission.

He is not going to fix those bugs.

Seems a bit callous to sell a product with no warning about known bugs.

I found a workaround by repeating short wav files so escape stops after completing the current one.

I still would like to know what old version does not do this and how to obtain it and what I lose in the current version.

However, I am not getting any help on the real problem which is that is does not run on my shack computer. I don't understand what is meant by default sound card only being a problem. I don't care what sound card it picks, I just want sound out and I get no sound on this computer.

Hi Sergei.Thank you for making CwGet and CwType avaible to all of us.They are very versatile and user friendly unlike man many others I tryed to use.I have one problem with Cw type though.First I must admit that I am practicly computer illiterate so forgive me.So since my laptop does't have COM/LPT port,but just USB I dont know how to interface my computer with that 2n2222 circuit you suggest to put between computer and transmitter.Will one of those "USB toCOM /DB-9 adaptors they sell on Ebay work?By the way most of them are incompatible with Vista!
Also, output of your 2n2222 interface must be connected to a keyer,or it can ground my 12v line that goes to transmitter relay?
Please help!
73,and best regards,Ireneusz.ve3zbu

Yes, USB/COM converter with DTR/RTS lines and appropriate driver will work.

ii> By the way most of them are incompatible with Vista!

You need working driver for Vista...

ii> Also, output of your 2n2222 interface must be connected to a keyer,or it
ii> can ground my 12v line that goes to transmitter relay?

Interface output is connected to straight key input of transmitter,
so yes, it can ground switching line.

4601. Re: AALog 3.0 beta 1123 - slow freq change

Yahoo group: dxsoft
Date: 2010-04-10 11:10:36 UTC
From: n0rq
Topic: 4322 Message: 4601

I just got my rig control running in AALog 3.0, using OmniRig (Icom IC-746PRO). When I first set it up, under Config/Options/External Programs, the OmniRig configuration had a POLL INT and TIMEOUT values that were too high. (One of them was 4000ms - I don't remember which it was.) When I clicked on a cluster window spot, the rig was VERY slow to respond -- sometimes over 10 seconds.

Lowering one or both of those values to 100ms made the rig respond very fast.

4602. AALog 3.0 & omnirig - band/freq not working in New QSO window

Yahoo group: dxsoft
Date: 2010-04-10 11:49:41 UTC
From: n0rq
Topic: 4602 Message: 4602

Hello. Using AALog 3.0.0.1128 and OmniRig, my IC-746PRO with CI-V interface will change frequency and mode when I double-click on a spot in the cluster window.

However, the band/freq/mode does not get put in the New QSO window.

If I change the tuning on the rig, the correct freq/mode does not get put in the New QSO window.

If I change the BAND in the New QSO window, the rig jumps to that band. The Freq field in the New QSO window is greyed out, so I can't change that.

Am I doing something wrong? I've played with it -- cannot figure it out.

Tnx & 73,
Dave N0RQ

Hi Alexander

1) Please tell me the optimum settings in OmniRig for Poll int., ms. and for Timeout, ms.

Also, in future version of AALog 3.0, can you include grids in the Search?
Maybe grid range also, such as example EM00 - EM99
There are too many grids .

Also, can you make color in grids on DXAtlas? For example, yellow grid if worked, green grid in worked and confirmed. Orange Grid if QSL sent but not yet received.
It is very useful for us who work 6 m, 2 m , 70 cm.

4605. Re: AALog 3.0 & omnirig - band/freq not working in New QSO window

Yahoo group: dxsoft
Date: 2010-04-11 12:18:12 UTC
From: n0rq
Topic: 4602 Message: 4605

Hi.
Yes, I have
"Use Omnirig for TRX configuration" checked -- and it is configured.

I figured out the problem, so it works now. In case anyone else has it in the future, this is what I had.

The Rig1 tab had:
IC-746PRO
COM2
19200 (which is what the rig is set at)
data 8
parity none
stop 1
RTS low <-- see note below
DTR high
poll int 100
timeout 100

When I double-click a station in the cluster window, the rig immediately jumps to that freq and the callsign appears in the New QSO window -- but the band/freq does not change in the New QSO window.

In the New QSO window, if I manually change the mode (or the band), the rig responds, but when I manually change the mode (or the band) on the rig, the New QSO window does not show the change.

SO, I played with it some more, and I changed RTS to HIGH, and all of a sudden it worked. Very happy!

Tnx & 73,
Dave N0RQ

DS> No general suggestion. Different TRX need different settings

DS> How can I know what is the proper settings for my FT-920 ? and my Compact
DS> Presario 2.4 GHz PC?
DS> Is ther esome kind of test to do? I cannot find in my FT-920 manual about
DS> this.

Poll interval configure how often OmniRig ask your TRX abt Freq and mode.
if you do not make contacts on different bands every 300 ms, then 500 ms is OK for you.

Timeout - how lon OmniRig wait answer from TRX. Usualy 2000ms is
enought

Best regards,

4609. CWGet Signalink USB problem

Yahoo group: dxsoft
Date: 2010-04-16 14:38:57 UTC
From: Irv [K3IRV] McWherter
Topic: 4609 Message: 4609

I recently installed my Signalink USB to primarily use for PSK. But since I have installed the Signalink USB my CWget does not work well.

Looking at previous posts I have increased the RX control.

I have set the Receive audio to "USB audio CODEC" in the setup window. I am assuming this is the choice for the Singalink as the only other choice is SoundMAX digital audio.

The CWget screen gives the appearance that the incoming signals are severely attenuated.

Any ideas?

Thanks and 73,

Irv - K3IRV

Probably you need to fix "Recording" settings of Signalink soundcard mixer...

USB
Soundcard
Helo everibody,

WORK ON LAPTOT WITH ICOM 706MKIIG TRTTY (¿?)

http://www.g4zlp.co.uk/unified/usbsoundcard.shtml

USB Soundcard

Complete Hi quality USB soundcard [5.1].
Adding a dedicated soundcard for DATA modes (or any other purpose) cannot be any easier than this ! Simply plug this small "dongle" into your USB port and you Windows will install the driver automatically and add a high quality soundcard to your system. Provides audio in [mic] and audio out [speaker].
Great addition for operating DATA modes. This will allow you to configure your systems soundcard for your system sounds, "email alerts etc", then configure your DATA software to use the USB soundcard. No more TX-ing those "system sounds".
This can of course be used with all our DATA interfaces.

Works with ALL Windows OS inc Vista. Will allow those older unsupported afsk programs to function correctly and recognise this soundcard under Windows Vista.
Thnaks for help, ...!
Reards,
Ivan Gonzalez

It should work, if it is really quality enough.

One of users have a problem with very cheap USB soundcard (it was very noisely).
Problem was fixed by replacing to more expensive model.

Yes, start with build-in soundcard.

Probably you will need external attenuator to avoid mic-input overloading...

Ivan,
Don't use a mono jack for the "mic-in" of your laptop.
Always use a stereo lead from your mono-out/radio/receiver.
Found this on the net/www:
Most audio adapters use a microphone with a mono plug. But there are a few that require a powered microphone that have a stereo plug. The power to the microphone is supplied through the extra wire. You will have to check the documentation for your audio adapter to be absolutely sure."

THe headset mic I use got a "stereo" jack, in other words:
The first ring is ground.
The tip is signal.
The middle ring +5 Volt.

Compar a mono jack and a stero one.
A mono jack to mic-in can short circuit the +5V internaly.

4627. [ANN] RSS Morse - RSS feeds to Morse Code

Yahoo group: dxsoft
Date: 2010-05-11 15:43:33 UTC
From: dc3dreamer
Topic: 4627 Message: 4627

I thought this might be of interest here ... I have developed a Windows program "RSS Morse" that reads RSS news feeds and outputs Morse Code on your computer's speaker or on a physical telegraph sounder via serial cable. It will send International or American Morse Code, and has adjustable CW radio tone, some old-fashioned spark-gap CW sounds, and several telegraph sounder sounds. You can control the character speed separately from the code speed for Farnsworth effects.

For a peek at the help file for the program see

http://morse-rss-news.sourceforge.net/

and to download an installer for RSS Morse

https://sourceforge.net/projects/morse-rss-news/

It's free and open source. Enjoy!

Date: 2010-05-18 09:24:05 UTC
From: Sergei Podstrigailo
Topic: 4628 Message: 4628

Hello All,

I just have uploaded CwType 2.0 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

--
Best regards,
Sergei

CwType Versions History

V2.0
Rig switching (SO2R support) works with WinKey interface now.
Options "Setup -> Text -> Put Time Marks to a Capture File" and
"Setup -> Text -> Use UTC Time" were made.
V1.92
A bug with manipulation speed saving was fixed.
V1.91
MOX settings works with WinKey now.
Maximal COM-port number is COM25 now.
V1.90
Beacon regulator defines not period, but pause between transmissions now.
Some improvements of speed changing macroses handling were made.
WinKey interface is supported now.
V1.86
Vertical scrollbar in Sent window was made.
CwGet works more correctly at 64-bits systems now
(it not tries to load 32-bit driver no more).
V1.85
Documentation was updated.
V1.80
"_" symbol is used as "short space" now.
Macroses `[rg1] , `[rg2] , `[rgs] , `[rgr] were made for SO2R support.

For AALog 2.47 you need copy file aalog.key to the new PC
For AAlog 3.0 you need just enter reg info on new PC

4636. help on Seatty

Yahoo group: dxsoft
Date: 2010-05-24 17:55:39 UTC
From: Pete
Topic: 4636 Message: 4636

I can't get software to receive weather fax(HF-FAX). Seems everyone finds it easy to use, not me. I am using Yaesu FT-100D speaker to attenuator to laptop PC (WinXP) mic in. I tune to Pt Reyes California USA 8682 KHz(-1.9KHz) for best signal(I am in Santa Barbara, CA. USA) and get two peaks on upper oscilloscope, as described in literature. I even use settings as shown in pictures. All I get is thick black lines or lots of black (even tried reverse). Same thing on a different laptop. I took my system (laptop/attenuator/software) to a local ham radio outlet in San Francisco, USA) too close to PT Reyes, so used Honolulu, HI USA they couldn't get weather fax either(they didn't have as good a signal as I get on my boat). I am getting frustrated. What am I doing wrong?

Thanks for any help.
Pete

Probably your soundcard has too big sampling rate error
(it is a common problem of modern cards).

Just make "slant correction" along these almost horizontal lines
to correct this error.

If you can't do it yourself,
send wave-sample of received signal,
created by "File/Open wave capture file" command, to _my_ e-mail.
I will check it.

Not sure I understand, Yaesu headphone out is stereo. If I am reading article correctly there is new stereo mini-jack

The four conductor 3.5 mm plug is also used as a speaker-microphone connector on handheld amateur radio transceivers from Yaesu......

A three- or four-conductor version of the 2.5 mm plug is widely used on cell phone handsfree headsets, providing mono (three conductor) or stereo (four conductor) sound and a microphone input. Common stereo headphones with the 2.5 mm plug are often not compatible with this type of socket. A 3.5 mm version of this plug is now commonly available on mobile telephones as well. A 3.5 mm stereo-plus-mic jack is available that is compatible with standard 3.5 mm stereo headphones, e.g. Nokia has been widely using TRRS connectors with 3.5 mm diameter since 2006. The selected pin assignment, with ground on the sleeve, is as well standardized in OMTP and has been accepted as a national Chinese standard YDT 1885-2009.

TRRS plugs do not work properly with a TRS stereo jack if the ground contact in the jack connects to the microphone contact on the plug. It is therefore a good practice to implement new TRS headphone jacks using actually a TRRS mechanical jacks and connecting ground to sleeve as well as the second ring contact. This way such jacks will provide better compatibility with different TRRS cell phone headsets.

So you are suggesting my attenuator may have the incorrect mini-jacks

I will check into this.

Thanks Pete

4640. CwGet 2.0 is released

Yahoo group: dxsoft
Date: 2010-05-26 15:28:18 UTC
From: Sergei Podstrigailo
Topic: 4640 Message: 4640

Hello All,

I just have uploaded CwGet 2.0 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

--
Best regards,
Sergei

==========

CwGet Versions History

V 2.0
AALog 3.0 support was made.
An option "Use mouse wheel for tuning" was made.
V1.80
Options "Setup/Put Time Marks to a Capture File" and
"Setup/Use UTC Time" were made.
V1.70
The "Setup/Multi-Channel Decoder" command opens additional Multi-RX Window.
CwGet decodes up to five strongest signals in about 1600 Hz bandwidth and
shows them in this window. To reduce amount of "garbage" in this window an squelch is used.
Squelch threshold is shown by horizontal line in the Spectrogram window.
This threshold can be changed by mouse with "Shift" key pressed.
The "Setup/Enable Squelch in Main RX Window" options enables squelch in
main RX window also.
V1.65
CwGet can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
Some minor bugs were fixed.
V1.61
Values 10:1 and 20:1 was added into "Zoom" menu.
Method of detector threshold automatic calculation was
fully rewritten.
In "Auto Threshold" mode user can define minimal value of detector
threshold by click at oscillogram window. Two horizontal lines
show current detector threshold value and minimal threshold in
this mode.
V1.60

Minor bugs were fixed and some minor improvements were made.
V1.55
A text in the receiving window is not truncated automatically now.
The "Zoom" menu and Alt-1 ... Alt-5 hotkeys change frequency scale of
spectrogram now.
"Speed lock" button state and locked speed are saved by "Setup->Save Setup" command
and are restored on software startup.
A bug was fixed - sound enabled by "Setup->Sound Output" option was wrong during
decoding from wave-file.
V1.50
The "Setup->Tune RIG by->Show Omni-Rig Setup" command activates
Omni-Rig setup dialog.
The "Setup->Spectrogram Colors Setup" and "Setup->Oscillogram Colors Setup"
menus can change colors of all elements of spectrogram or oscillogram
window now.
[...]

Pete, sorry for the late repley.
It is nothing more than "never put a mono-jack at the mic-in of your laptop".

Hope it helps a little..

Hi Sergei,

I got it to work a couple of times different days. I found while I am in Southern California, the broadcast at 4344.1 KHz. from San Francisco, early (7:00 AM to 9:00 AM) to work just fine, after 9:00 AM if just stops. It states this is only for night which I receive but other freq. are continuous, but no reception? Now that I have it working I will try some other freq and times and locations. Thanks

Regards,

Pete

4643. Rig interface

Yahoo group: dxsoft
Date: 2010-06-14 17:54:12 UTC
From: ha0dr
Topic: 4643 Message: 4643

Hi,
I have a somewhat strange problem.
I am running 2 microham devices, a MicoKeyer and a CW keyer. Both of them operates and controls the rig. However the AALog will only get the frequency from one (CWKeyer connected to TS-850S), the microKEYER connected to FT-857D will not transfer the frequency. The omnirig engine is running well for both transceivers and bandmaster sees the frequency from both rigs. Also bandmaster puts the callsigns from the cluster window into the new qso window callsign field, but the frequency is not transferred.
Computer running Windows XP SP3 professional.
Any clues ?
Thanks
Lajos HA0DR

4644. Interface for CWType/CWGet

Yahoo group: dxsoft
Date: 2010-06-16 04:51:41 UTC
From: Ben Pharr
Topic: 4644 Message: 4644

I will be using a borrowed Kenwood TS-480SAT to get on the air for Field Day. I would like to use CWType and CWGet, so I'll need an interface. I already have most of the parts I'll need to build one, but I have a few questions.

First of all, I don't quite understand why I need a connection to the PTT in addition to the key connection. Obviously I'm missing something. How would this work for one of my QRP CW rigs that doesn't have a PTT connection?

I'll be using a USB serial adapter, as my laptop doesn't have a serial port. I've seen the simple interface schematic in the help file. Are there any basic embellishments that are considered important, such as opto-isolators or something along those lines?

Is anything special needed for the CWGet interface? The need for attenuation is very briefly mentioned in the CWGet help file.

Thanks,
Ben

Surely, you don't need PTT if you wish to use transceiver MOX.

BP> I'll be using a USB serial adapter, as my laptop doesn't have a serial
BP> port. I've seen the simple interface schematic in the help file. Are

Opto-isolator is useful, but is not mandatory.

BP> Is anything special needed for the CWGet interface? The need for
BP> attenuation is very briefly mentioned in the CWGet help file.

Again, transformer isolator is useful, but not mandatory.

There is a good article about interfaces:

Topic: 4644 Message: 4646

Hi Ben,

You need PTT connection for TX/RX swithing, anyway TS-480 have CW VOX
system. So you are may use only CW keyer built on simple scheme using 2N2222
transistor. DTR (pin 4) and GND (pin 5) on 9pin COM connector. DTR is using
for keying.

If you will use factory build USB2COM interface, it is no problem, just
select proper COM port in CWType settings.

For CWGet, use 3.5mm jack cable from TS-480 head to LINE-IN on your PC.
Also, And use Windows Audio Mixer for audio adjusting.

4647. Interface for CWType/CWGet

Yahoo group: dxsoft
Date: 2010-06-16 07:39:58 UTC
From: Palle
Topic: 4644 Message: 4647

Hello Ben, WF5N

☐ First of all,☐ If you are using VOX, you do not need the PTT-signal, but some radios ex: FT847 do not have VOX. If your QRP-rig have a VOX, it would work. The CWTYPE-program use a COM-port☐s 2 signal. RTS and DTR, one for KEYING and one for PTT. In the setup you would see how to configure.

If your labtop doesn☐t have a COM-port, it would work fine with a USB to COM-converter.

As isolation between radio and computer, I will rekommand to use a 1:1 transformer 600 Ohm, any surplus would work. To ajust sound-level, use 1 K potentiometer, and to it at both IN and OUT-signals. (You may consider to try RTTY or PSK31 one day)

The signal isolation can be done by OPTO. It does not neet to bee powered ☐ the signal is power enough.

An example kan be seeing at
http://frenning.dk/OZ1PIF_HOMEPAGE/images/FT847%20Digimode%20and%20Contest%20Interface.jpg

This have bin build many times.

4650. AALog3 + TrueTTY + FT-2000 Radio Question

Yahoo group: dxsoft
Date: 2010-06-25 12:09:13 UTC
From: oceanbiz01
Topic: 4650 Message: 4650

Is anyone here using the Yaesu FT-2000 with TrueTTY ???
I have the FT-2000 connected to the PC Sound Card and I see that on the TrueTTY Spectrogram, the majority of receiver noise and signals are below 1850 Hz making the region from 1900 to 3000 Hz useless.
Is this normal?
ANd where should my TTY red and black lines be located?
When I was using my FT-920, I had the entire spectrum from 500 Hz to 3000 Hz available with background noise across the spectrogram. And my red and black lines were centered at 2125-2295 on the spectrogram.

Please let me know if I need to change menu settings in the FT-2000 and please tell me what those settings should be.

Config - Options - External programs - Configure (at Use CwType) -

PTT and Cw Port Type - Use program default.

PTT port , PTT pin , Cw Pin - Program default.

Dear Pedro

You cannot make changes to CW Type and TrueTTY when these programs are selected by AALog. You must open CWType alone , without AALog running, then make setup changes for comport etc.
Then save changes.
Then try with AALog.

Thank you Sergei,

It's configured this way in AALog.

As per CWType if I run it independently of AALog it does come up with the proper configuration (as I made and saved it), but when instantiated thru AALog it does come with the port configuration empty.

I'm sending offline to you a couple of screenshots of both instances.

Thanks, Pedro LU7HZ

AAlog makes CwType to free PTT port for another program in not CW mode is selected.

If you switch to CW mode in the "new QSO" window, AALog should set up
PTT port in CwType...

Hello lu7hz,

AAlog will set proper cwtype settings when you select CW mode in the
new QSO window.
This is way to run cwtype and truetty in the same time on the same
COM-port.
When you Select CW mode AALog configure COM-port settings in CwType and when you use
digital modes AALog configure COM-port in the truetty

4659. Access from AALog to Web QRZ.com

Yahoo group: dxsoft
Date: 2010-06-30 15:25:25 UTC
From: lu7hz
Topic: 4659 Message: 4659

Hello,

Is there any way you might suggest to allow information from QRZ.com (web) to be pulled and used to complete the data of a given callsign while the entry is being made?

From what I understand there is not a standard way included in the program, but I'm referring to something like an API that can be used to achieve that (assuming the development of the adapter itself is made out of AALog).

Thanks, Pedro LU7HZ

4660. Kenwood PC interconnect cable Web QRZ.com

I know the Rigblaster (West Mountain Radio) has a cable that ends with a
8 pin mic plug
but you have to "wire" the internal connections correctly so that the
computer's audio
ends up on the right mic pin in the Knwd. The audio lines are different
in Icom and Yaesu mic pins.

I use a Rigblaster with my Knwd 440 and it works fine.
It isolates the audio, adds volume control, triggers PTT, and then
disconnects the mic when the computer's audio is ON.

All you really need to do is connect the sound card OUT (line out) with a
shielded cable (stereo or mono)
through an isolation audio transformer to the mic jack. Just watch out for
RF getting back into the mic cable.

The PTT (push to talk) line usually comes from the serial port of the
laptop (RTS or DTR)
(you need a serial port or a USB to Serial port hardware/software).

If you put the Knwd 440 on VOX, then you don't even need a PTT line.
The audio triggers the rig into transmit.... but you need to adjust the VOX
gain carefully.

What mode are you trying to work (CW, PSK, ?)

Does that help,

Barry k3eui

Barry,

Thanks for the speedy reply. I will check the Rigblaster cable out. First I would like to be able to transfer the Kenwood information to logging software. If I can get that working I want to move on to CW and digital modes. My laptop only has USB interface so going through that adapter is another potential problem.

4663. Cluster Monitor will not connect

Yahoo group: dxsoft
Date: 2010-07-09 15:07:08 UTC
From: mortonvox
Topic: 4663 Message: 4663

I just bought Cluster Monitor but can't get it to connect.
Would someone please help me.

When I try to connect with Cluster Monitor I get this error message:
'or' is not a valid integer value.

What do I need to do?

I looked under; Tools - Options - Connection properties
but I'm not sure what to do.

LAN is checked (I use DSL).
I tried v_oleon8@... (my email address) in the User name box.
and my ISP password in the Password box. No luck.
I don't know what the Proxy settings: Name and Port boxes mean either.

My Asus netbook computer does connect to the internet ok.
It has Windows XP Home with Service Pack 3.

Hope you and get me going on this.

Thanks
Dave Dzelsky N3DZ

By the way, AAVoice wouldn't exit and would give me an error:
Access violation at address 004778C4 in module 'AAVoice.exe'.
Read of address 00000000.

But I read through the YahooGroup DXsoft list and found your response
to download a different AAVoice.exe of 603 KB dated 3/26/2008.
I don't get the error anymore. So did I do the right thing?

4664. CwGet 2.10 beta is published

Yahoo group: dxsoft
Date: 2010-07-14 14:37:08 UTC
From: Sergei Podstrigailo
Topic: 4664 Message: 4664

Hello All,

I just have uploaded CwGet 2.10 beta to the main site and mirror:

http://www.dxsoft.com/cwgetb.zip
http://www.hamport.com/cwgetb.zip

--
Best regards,
Sergei

==========

CwGet Versions History

V2.10
When the "Sp.lock" buttons is pressed, minimal and maximal speed (in LPM) are defined
by regulators at left side of this button.
Click to this button with "Ctrl" key pressed moves center value of speed limit to
a current speed.
The "Setup/Multi-decoder/Use speed limits from main decoder" option defines
if these speed limits are used in multi-decoder window also.
The "Setup/View/Always on top" option is used in place of "OnTop" button now.
V2.0
AALog 3.0 support was made.
An option "Use mouse wheel for tuning" was made.
V1.90
Most settings are being selected in the separate window now,
which is opened by the "Setup" menu.
"Main Filter", "Burst Filter" and "Sound Output" sub-menus are opened by the "Filters"
menu.
The "Multi-Channel decoder" command is moved into the "File" menu.
"Save Buffer" hotkey is Ctrl-S now.

Ctrl-F hotkey switches "Sound Output" state between "Sound Without Filtering"
and last selected filter (or "Sound Off" state, if it was selected last).
Multichannel-decoder font and background is defined separately from main
RX Window settings.

Auto-threshold process in the main and multi-channel decoder works better now.
Auto-threshold low limit can be defined manually if the
"Setup/Interface/Enable manual auto-threshold limit" option is selected.
This limit is used not as minimal value now, but as level of input noise.

The "Setup/Multi-decoder/Use manual auto-threshold limit from main decoder" option
enables using of user-defined limit in the multi-channel decoder.
V1.80

Options "Setup/Put Time Marks to a Capture File" and
"Setup/Use UTC Time" were made.
V1.70
The "Setup/Multi-Channel Decoder" command opens additional Multi-RX Window.
CwGet decodes up to five strongest signals in about 1600 Hz bandwidth and
shows them in this window. To reduce amount of "garbage" in this window an squelch is used.
Squelch threshold is shown by horizontal line in the Spectrogram window.
This threshold can be changed by mouse with "Shift" key pressed.
The "Setup/Enable Squelch in Main RX Window" option enables squelch in
main RX window also.
[...]

Hi Sergei

I have one comment about this version that is really about cosmetics:
With the addition of the new speed displays, the minimum size has grown
wider. I like to keep my window relatively small, and while I can still
do that by ignoring the buttons to the right, I was wondering if it
might be possible to optionally remove the buttons that aren't used as a
user preference? For example, I do occasionally use Speed Lock, but I
pretty much never use Replay or Save. If I removed those, it would
shrink the window again and I'd have all the buttons I need available.

It's not a big problem, but I just thought I'd mention it.

4667. AA.Log connection with Web QRZ.com

Yahoo group: dxsoft
Date: 2010-07-14 17:54:47 UTC
From: lu7hz
Topic: 4667 Message: 4667

Hi,

A previous question get unanswered, so I guess there is no answer.

I would then ask if there is any API I can use to develop an interface between AA.Log and QRZ.com (actually between AA.Log and some external database).

Today the program supports different DB in CD-ROM, I wonder if the access to them are thru some sort of DLL I can wrote myself to direct the query somewhere else than the CD (as long as the info supplied in return is what the program expects).

I do really enjoy the program and find it very useful, but still miss the capability I had in the previous one to have the data of the OM whom I'm talking with after entering his callsign. It's extremely useful when you're running a list of guys waiting for work you.

Thanks, Pedro LU7HZ

Yahoo group: dxsoft
Date: 2010-07-14 17:49:51 UTC
From: lu7hz
Topic: 4668 Message: 4668

Hi All,

Is there a way to save or otherwise preserve a set of macros?

I've a set of definitions (for keys, a-keys and c-Keys) for say English DX and I would like to have another for Spanish ragchewing; is there a way to (somehow) swap the sets?

Doesn't need to be fancy, it can be saving a copying a configuration file.

Thanks, Pedro LU7HZ

There is two way to select using ini-file at CwType start.
But there is no way to switch them "on the fly"...

l> It's fine to have the possibility to select the INI file at start, what is the way to do it?

It is a good time to read help-file now :)

Selected options of the program are saved via the "Setup->Save Setup" menu.
By default options are written into the CWTYPE.INI file. The program looks for this file in the working directory. If CWTYPE.INI file is not found in a working directory, working directory is changed to a default value. You can have several variants of the ini-file for different situations (for example, one for ordinary QSO's, and another for contests).
Just create several shortcuts to CWTYPE.EXE each with a different working directory and copy
CWTYPE.INI file to each of this directories. Another way is to define configuration file name
in command line after /F key, for example CwType.exe /F C:\MyData\cwtype2.ini .
If /F key is present, a working directory is not changed.
Take to attention, that if full path to a file is absent after /F key, Windows directory is used for reading and writing of ini-file.

Mine also works. It opens a second window with QRZ.com in it.

However, How do I get this information loaded into the blank fields of the New QSO Window?

4677. Re: AA.Log connection with Web QRZ.com

Yahoo group: dxsoft
Date: 2010-07-16 23:17:20 UTC
From: lu7hz
Topic: 4667 Message: 4677

Yes, indeed.

Mine also opens a 2nd window with www.qrz.com on it pointing to the station just typed if it exists.

However the fields aren't populated (you need to retype it) and at least for my configuration it requires two clicks to activate the link (click on the little internet goggle and then "Lookup in the Internet".

When I point to the QRZ.com local database it does pupulate the proper fields as soon as I type the callsign without any extra typing; looking for a similar mechanism but with the online QRZ.com.

Regards, Pedro LU7HZ

From: lu7hz
Topic: 4667 Message: 4678

No problem my friend, We'll know you do the best you can.

I believe I'd explained it on a previous mail, but what I'm looking for is to get the same data population obtained when you have the local QRZ.com database CD-ROM with the online (free) QRZ.com website.

Not really aspiring for you to develop it, if there is some API I can work with I can give it a try to program it.

Regards, Pedro LU7HZ

4686. AATest and IOTA contest

Yahoo group: dxsoft
Date: 2010-07-24 16:29:28 UTC
From: Erik Nielsen
Topic: 4686 Message: 4686

I was trying to use AATest v 1.85 in this weekends IOTA contest.

However I did not find a way to log the Island reference number given from
the contest stations,
and the multipliers did not get registered.

I had to abandon using the program and go back to my old program (SDI).

What can I have done wrong, as the contest is between the options to select
when setting up a new contest.

4689. Zerobeat frequentie for CW

Yahoo group: dxsoft
Date: 2010-07-26 08:16:27 UTC
From: Ludovic
Topic: 4689 Message: 4689

How can I adjust the exact zerobeat frequentie for CW 100 Herts?
I want to be sure that the reciever is exactly the same as the sender transmitter frequentie.

4690. Using AATest during WAE CW with QTC

Yahoo group: dxsoft
Date: 2010-07-27 07:09:21 UTC
From: lu7hz
Topic: 4690 Message: 4690

Hi all,

Looking forward to use AATest during the incoming WAE CW 2010 contest.

It's not clear for me how the QTC feature of the contest can be logged.

Each QTC would count just as another QSO, you could exchange as many as 10 QTCs with a single station and won't be necessary to do it at once.

Any help or clarification would be mostly welcomed.

Regards, Pedro VU2/LU7HZ

L> I want to be sure that the reciever is exactly the same as the sender transmitter
frequentie.

Move Tx mark in CwGet window by right mouse button (or Ctrl + left mouse button)
to position of zero beat tuning of your rig.

Then click Setup/Save.

Now tuning rig to make rx freq to be the same as tx mark freq.

If CAT is enabled at Setup/Tuning page, CwGet tunes rig to zero beat frequency
by mouse clik automatically.

From: lu7hz
Topic: 4692 Message: 4696

Hi Angel,

Unfortunately this is not an option for me since the native port is COM1 and the additional USB serial is COM5.

However, it's worth noting the one that does work is the CAT attached to the RIG1 sitting in COM1.

I'm failing to see what is the command to switch from one to the other. In other words, ¿how can I do to make commands from CWGet to come to the RIG2 instead of the RIG1? (same with TrueTTY, etc).

BR> When I could find them ....
BR> I cannot find a configuration entry either.

For aalog 3.0 just copy aalog folder to another PC. Be carefull if you
use Vista or Win7. It's possible Windows move data files into virtual
folder. The main file of aalog is AALOG.GDB

4706. Variable speed

Yahoo group: dxsoft
Date: 2010-08-14 18:28:10 UTC
From: lu7hz
Topic: 4706 Message: 4706

Hi,

I'm trying to send a message with variable speed (the TEST and 5nn in contest messages) and I'm not being able to with CWType.

The macro in use is

~[tx] CQ LU7HZ ~[ss]~[sp300]TEST~[sr]

or

~[tx]~[ss]~[sp200] DE LU7HZ ~[sp300]5NN ~[sp100]~[isNumberSent]~[sr]

But both messages are sent correctly at the speed set without any variation.

Probable I'm overlooking something or not enabling the feature somehow.

Any help would be, as usual, immensely appreciated.

Regards, Pedro LU7HZ

At first, it is very bad idea. I HATE to heard SUCH BAD CW
(CW with variable speed is bad CW).

At second , replace "~[s" to "`[s" to get what you want...

I don't have experience in contests enough to have an opinion, it seems it's a method widely used by contest stations to accelerate the fixed parts of the QSO.

Will try in contest and form an opinion.

It does work, thanks. Pedro LU7HZ

4710. Usage of AATest during WAE

Yahoo group: dxsoft
Date: 2010-08-17 11:59:55 UTC
From: lu7hz
Topic: 4710 Message: 4710

Hello,

After finishing the WAE 2010 CW edition I'd took some notes on the usage of AATest regarding the QTC feature of this contest; perhaps it's just I didn't knew how to do some things or perhaps it would sit as a suggestion for future improvement.

1) If sending QTC the SAVE button is pressed all 10 (or whatever avaialble) QTCs are marked as "sent" for good; there is not an easy way to recover from that mistake. Editing the qtc.aal file removes the unsent QTC from the Cabrillo file generation but the unsent QTC aren't restored and offered anymore.

2) If the op is willing to send a number of QTC fewer than the total available for a given station this seems not to be possible.

3) The QTC associated macros are hardcoded, although the text of the QTC exchange resists little variation I'd found annoying the macros placing CWType in RX mode after each execution (I'd my macros tuned to operate in TX always mode and rely on the full break-in of the transmitter in order to avoid sequencing problems while sending).

4) The help button in the QTC window doesn't seems to work.

5) It would be useful (necessary actually) to have a visual clue on whether a given station typed at the new QSO window has the potential to receive QTC (either because there are QTC available or because previous QTC has been sent to her). Couple of times I found no QTC were available to send after offered them (and once I'd been told by the other station that I'd already send the 10 quota to them). It can be either a graphical clue or a numeric clue (i.e. NN/MM where NN is the max number of unsent QTC and MM the number the station at the new QSO window is eligible for). Perhaps some background color such as green if NN is <5, yellow if <10 and red if 10 or above).
The workaround for that is to press Ctl+S prior to offer or to type a fake QRA and press Ctl+S to see how many are waiting, but it's time consuming.

6) Perhaps some separate cound on the statistics windows on the number of QTC sent would be appropriate (QSO and QTC are counted together).

All in all AATest performed nicely for me, it's a well written piece of code.

4711. CwType 2.01, Windows XP, LPT configuration issue. Need HELP

Yahoo group: dxsoft
Date: 2010-08-24 07:42:35 UTC
From: jeraldvolpe
Topic: 4711 Message: 4711

I need help with CwType 2.01. I am using Windows XP, SP3.

It has been a while since I last used CWType. My HP/Compaq Laptop's PORT expander includes an LPT port. The LPT port resources under the Device Manager are:

I/O Range: 03BC-03BF
I/O Range: 07BC-07BE

My LPT to Rig cable is the LPT cable found in the CwType Help file. This cable works fine (see Paddle output below).

LPT Port type EC (can not change)
LPT at address: 03BC
PTT at D1
Key at D0
Power at D6 and D7

Paddle Port=User Defined Port 03BD
Dash Xor Mask FF, Dash And Mask=30
Dash Xor Mask FF, Dot And Mask=10

Paddles work great....keys transceiver (QSK with Argonaut V) as long as CwType's 'XT' is OFF and 'MOX' is not enabled.

PROBLEM: Keyboard entry into CwType will not key the transceiver.... using XT manually, or with MOX enabled. The Tune function does not work.

If MOX is enabled the paddles stop working.

73,
Jerry, KG6TT

From: jeraldvolpe
Topic: 4711 Message: 4713

Sergei,

Nothing wrong with the interface. Late last night, after numerous restarts, checking, re-checking my addresses.... and scratching my head.... I tossed the towel and wrote the message on this group. Could't sleep, so started looking to see if HP had ever released a driver update for the dock I obtain all my ports from. No joy.

3am, and a few more restarts, a lot more "it just can't work one way and not the other..." kind of stuff.... and one more restart and guess what? It just started working. As simple as that!

Regarding CwGet, current beta...

The routine you added to CwGet to add user selectable minimum and maximum sync speeds, really, really, really improved the performance of CwType. I made settings 85 and 150 and there are are now hardly any dropped first characters and AutoGTM locks onto and decodes correctly the found station much faster. You can literally follow a QSO with a sizable split.

Thanks for all the great software.

73,
Jerry, KG6TT

4714. Re: CwType 2.01, Windows XP, LPT configuration issue. Need HELP

Yahoo group: dxsoft
Date: 2010-08-25 05:37:08 UTC
From: jeraldvolpe
Topic: 4711 Message: 4714

Sergei,

Well, today it will not work. Same problem as originally stated. If MOX is disabled I can send with the paddles no problem, but I can not send from the keyboard manually or with MOX enabled. Also with MOX enabled the paddles will no longer key the transceiver.

Sergei, I simply can't see the interface being the issue.

What is DXSOFTIO? I installed Switcher and it said this file was missing but it is in Windows\System32\Drivers. I placed a copy in the Switcher folder and the error went away. Could there be a version issue with DXSOFTIO?

Too many hours on this issue. I hope you can help me solve this.

73,
Jerry, KG6TT

I have asked you yesterday:

===
Try check what is change if PTT is set to "NONE"...
===

Check also if you can switch LPT to "Normal" mode (not EPP or ECP).
Probably option "don't use interrupt" can't help.

BTW, this port is onboard or external card?

j> What is DXSOFTIO?

It id driver for handle hardware ports (LPT's ports too).

j> I installed Switcher and it said this file was missing
j> but it is in Windows\System32\Drivers.

Probably you have tried run it simultaneously with CwType...

4718. TrueTTY 2.78 beta is published

Yahoo group: dxsoft
Date: 2010-08-27 09:10:40 UTC
From: Sergei Podstrigailo
Topic: 4718 Message: 4718

Hello All,

I just have uploaded TrueTTY 2.78 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

--
Best regards,
Sergei

==========
======

TrueTTY Versions History

V2.78
PTT-interface settings were rewritten.
Now PTT can be controlled via:
- COM-port;
- standard LPT-port;
- LPT-port with non-standard addresses (PCI-cards etc.);
- via OmniRig by COM-port control signal pins;
- via OmiRig by CAT-commands;
- via WinKey.
An option "Setup/Tuning/Wheel tuning speed" was made.
A bug with "`[pa]" macros was fixed.
Callsigns and numbers recognition was improved in the "Catch word in contest mode".
V2.76
QPSK-63 mode receiving and transmitting were made.
V2.75
Option "Use mouse wheel for tuning" was made.
A bug was fixed - "Help/Contents" menu didn't work in V2.70.
V2.70
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
/S parameter of command line is not used now.

4731. CwGet 2.20 is released

Yahoo group: dxsoft
Date: 2010-09-16 14:10:16 UTC
From: Sergei Podstrigailo
Topic: 4731 Message: 4731

Hello All,

I just have uploaded CwGet 2.20 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

--
Best regards,
Sergei

==========

CwGet Versions History

V2.20
The "Setup/Text/Swedish charset" option was added.
Some minor fixes were made.
V2.10
When the "Sp.lock" buttons is pressed, minimal and maximal speed (in LPM) are defined
by regulators at left side of this button.
Click to this button with "Ctrl" key pressed moves center value of speed limit to
a current speed.
The "Setup/Multi-decoder/Use speed limits from main decoder" option defines
if these speed limits are used in multi-decoder window also.
The "Setup/View/Always on top" option is used in place of "OnTop" button now.
V2.0
AALog 3.0 support was made.
An option "Use mouse wheel for tuning" was made.
V1.90
Most settings are being selected in the separate window now,
which is opened by the "Setup" menu.
"Main Filter", "Burst Filter" and "Sound Output" sub-menus are opened by the "Filters"
menu.
The "Multi-Channel decoder" command is moved into the "File" menu.
"Save Buffer" hotkey is Ctrl-S now.

Ctrl-F hotkey switches "Sound Output" state between "Sound Without Filtering"
and last selected filter (or "Sound Off" state, if it was selected last).
Multichannel-decoder font and background is defined separately from main
RX Window settings.

Auto-threshold process in the main and multi-channel decoder works better now.
Auto-threshold low limit can be defined manually if the
"Setup/Interface/Enable manual auto-threshold limit" option is selected.
This limit is used not as minimal value now, but as level of input noise.

The "Setup/Multi-decoder/Use manual auto-threshold limit from main decoder" option
enables using of user-defined limit in the multi-channel decoder.
V1.80
Options "Setup/Put Time Marks to a Capture File" and
"Setup/Use UTC Time" were made.
V1.70
The "Setup/Multi-Channel Decoder" command opens additional Multi-RX Window.
CwGet decodes up to five strongest signals in about 1600 Hz bandwidth and
shows them in this window. To reduce amount of "garbage" in this window an squelch is used.
Squelch threshold is shown by horizontal line in the Spectrogram window.
This threshold can be changed by mouse with "Shift" key pressed.
The "Setup/Enable Squelch in Main RX Window" option enables squelch in
main RX window also.
[...]

4733. HamPort RIG1/RIG2 Swap

Yahoo group: dxsoft
Date: 2010-09-19 14:46:20 UTC
From: lu7hz
Topic: 4733 Message: 4733

Hi,

I keep making the question.

How I can make to switch the control from RIG1 to RIG2 in HamPort (both are included in "Trx Settings" but only RIG1 seems to be controllable.

If this is not possible and HamPort only control what is defined as RIG1 saying so will make me not to post the question any longer (I'll surely be wondering why the authors included the setting for RIG2 though).

This is a question I believe the authors should be able to answer easily.

Thanks, Pedro LU7HZ

4736. CWGet and ICOM 706

Yahoo group: dxsoft
Date: 2010-09-19 23:48:52 UTC
From: lu7hz
Topic: 4736 Message: 4736

Hi,

I do use CWGet mostly as an active filter for CW.

Using it in a Yaesu FT-100 with a CAT the usage is intuitive and straightforward; in this rig the CW uses the BFO convention of USB only narrower. Clicking on a signal spectra on any part of the CWGet passband centers automatically it at the receiving slot (yellow mark). Moving the VFO up using the CAT moves signals from right to left.

When changing to a ICOM706 also with a CAT it seems the rig uses for the CW mode the BFO convention of LSB. Clicking on the signal spectra on any part of the CWGet passband instead of centering the signal moves it away from the receiving slot (yellow mark). Moving the VFO up using the CAT moves the signal from left to right.

In order for the ICOM706 to tune like the FT-100 USB needs to be selected, but it's of no use in CW to do so.

Is there any way to configure CWGet to operate with an inverted condition of CW using the LSB convention instead of USB?

Thanks, Pedro LU7HZ

Hmm, CwGet should understand when transceiver use CW-R.
It looks like OmniRig don't report that rig use CW-R.

Probably editing OmniRig ini-file can help...

Hello Sergei,

There is nothing in the Omnirig.INI file pointing to the direction if the tuning or the mode. What do you suggest to look for?

In any case it seems it's CWGet the one not tuning correctly, is there any way to modify that behaviour thru the configuration of it instead of OmniRig?

Regards, Pedro LU7HZ.

I mean not Omnitig.ini but ini-file of used rig,
probably IC-706 MKII.ini or IC-706 MKIIG.ini

I'd try there:

```
===
[pmCW_U]
Command=FEFE58E0.06.03.FD
ReplyLength=13
Validate=FEFE58E00603FD.FEFEE058FBFD

[pmCW_L]
;not supported
====
```

replace CW_U to CW_L and vise versa.

l> In any case it seems it's CWGet the one not tuning correctly,

CwGet tunings correctly if OmniRig reports mode correctly.
I tested it on TS-870S at CW and CW-R - it works.

l> is there any
l> way to modify that behaviour thru the configuration of it instead of OmniRig?

I think to add "Sideband" option to CwGet - Auto/USB/LSB ...

--
Best regards,
Sergei

It looks you just need to switch rig to CW mode
and press mode again during 2 sec:

===
The following modes are available in the IC-
706MKIIG:
SSB (LSB/USB), CW, CW-R (CW reverse), FM,
WFM (receive only), AM, RTTY and RRTTY (RTTY
reverse).
To select the desired mode of operation push
[MODE] one or more times, then push [MODE] for 2
sec., if necessary. See the diagram at right for the
order of selection.
? The selected mode is indicated in the function display.
Note: If a desired mode cannot be selected, it may be
hidden using Initial Set mode (p. 50).
====

I download manual there:

http://www.icomamerica.com/en/downloads/Default.aspx?Category=19

Thank you Sergei,

I'll try your earlier suggestions when I come back to my shack this
afternoon after work.

However I do have a ICOM706 and not a ICOM706MKII.

Although the rig does have a CW-R mode from the menu HamPort (OmniRig?) refuses to select that mode; placing manually the mode in the rig doesn't fix the tuning problem.

I believe the tuning mode Auto/LSB/USB is a good idea, not all rigs seems to follow the convention that CW is tunes as USB; count me in to beta test it if at some point you make that addition.

4743. Re: CWGet and ICOM 706

Yahoo group: dxsoft
Date: 2010-09-21 23:26:00 UTC
From: lu7hz
Topic: 4736 Message: 4743

Hi Sergei,

I finally find it out, the fix is to modify the IC-706.INI in the
\Rigs directory of OmniRig.

In it's standard form the CW mode in the IC-706 is reported as CW_U, whereas the CW-R mode can not be modified thru the CAT Interface. In the standard form CW_L is reported as "not supported". But at least my rig operates CW as if it were LSB.

To fix the problem the "U" and the "L" needs to be swappedd in the "set mode" area so after the modification is left as:

```
[pmCW_L]
Command=FEFE48E0.06.03.FD
ReplyLength=13
Validate=FEFE48E00603FD.FEFEE048FBFD

[pmCW_U]
;not supported
```

And also at the [STATUS2] area "pmCW_U" needs to be changed by "pmCW_L" in the Flag1 entry, after the modification is left as:

```
Flag1=000000000000.0000000000.FF.0000|000000000000.0000000000.03.0000|pmCW_L
```

Hope it helps somebody else.

Regards, Pedro LU7HZ.

4744. AALog 3.0 release

Yahoo group: dxsoft
Date: 2010-09-25 12:19:15 UTC
From: Alexander Anipkin
Topic: 4744 Message: 4744

Dear dxsoft users,

Just upload to web sites release of AALog 3.0 (bild 1140)

Changes:

+ Can edit freq in Write log mode
- fixed problem with LoTW not sent/not received filtering
- No communication with TRX in Write log mode
- when you changed CwType/TrueTTY setings AALog do not save new
values. Fixed.
- No data change in 00 UTC. Fixed.
- in the Award Manager window when you click LoTW or EQSL cursor move
to first record. Fixed
- When you select call in cluster window AAlog do not clear data in
QSO filds in the New QSO window. Fixed.
- Do not send to DXAtlas Grid of the DX station. Only default grid for
territory displayed. Fixed.
+ changed color of icons for eQSL status.
+ fixed prefix list
+ Help file is available.
- do not display new QSL status in main grid when it changed in the QSL
service window while you not reloaded log. Fixed.
- fixed several small bugs.

update files:
http://www.hamport.com/aal3-upd.zip
http://www.dxsoft.com/aal3-upd.zip

full package:
http://www.hamport.com/aal3.zip
http://www.dxsoft.com/aal3.zip

Best regards,
Alexander mailto:aia@...

- Do not send to DXAtlas Grid of the DX station. Only default grid for
territory displayed. Fixed.
+ changed color of icons for eQSL status.
+ fixed prefix list
+ Help file is available.
- do not display new QSL status in main grid when it changed in the QSL
service window while you not reloaded log. Fixed.
- fixed several small bugs.

Hi Alex

That is cutting it close for upgrade .
Can you provide by 9 Oct?

As I understand new ones:
PJ2
PJ4
PJ5 & 6 (one DXCC Entity)
PJ7

This from W3UR at ARRL

4749. AALog 3.0 release

Yahoo group: dxsoft
Date: 2010-09-26 08:02:39 UTC
From: Erik Nielsen
Topic: 4744 Message: 4749

Hi
I am getting some errors entering data in New QSO window.
'Class not registered'
It does not say which class.
I am using a Vista Home Premium, and I think I have seen that kind of
problem before,
but not with AALog.

Do you have any idea what class should be registered ?

Look like you configure use BandMaster/DXAtlas/TrueTTY/CwType/Cwget
but do not install them. Try to clear checkmarks in the configuration
of external programs.

Best regards,
Alexander mailto:aia@...

Hi Alexander

You were right. I did have CwGet and CwType checked in the config, so now I removed them and I will see if the error has disappeared.

Dear dxsoft users,

Just upload to web sites release of AALog 3.0 (bild 1140)

Changes:

+ Can edit freq in Write log mode
- fixed problem with LoTW not sent/not received filtering
- No communication with TRX in Write log mode
- when you changed CwType/TrueTTY setings AALog do not save new values. Fixed.
- No data change in 00 UTC. Fixed.
- in the Award Manager window when you click LoTW or EQSL cursor move to first record. Fixed
- When you select call in cluster window AAlog do not clear data in QSO filds in the New QSO window. Fixed.
- Do not send to DXAtlas Grid of the DX station. Only default grid for territory displayed. Fixed.
+ changed color of icons for eQSL status.
+ fixed prefix list
+ Help file is available.
- do not display new QSL status in main grid when it changed in the QSL service window while you not reloaded log. Fixed.
- fixed several small bugs.

Hello All,
It is a shot in the dark....
Install AAlog direckt on your harddisk in e.g. C:\DXsoft\AAlog.exe
instead of C:\Program Files\AAlog.exe.
Vista is preventing writing to Program Files.

There are 2 main times this can happen, after opening the program I click on sh/dx on the cluster. It sometimes works and sometimes freezes. The other time it can happen is after it has been on for a while I go to click on the band map and nothing happens. The only way to get it working again is to close the program and restart it.

In response to the other person it is installed in it's own directory not in program files.

Regards

Bob

Allexander

I think I have possibly found the problem. I found that I had an old version of AAlog still installed in another directory. I deleted it and it now seems to be working ok. Many thanks for a good logging program.

Kind regards

Bob

4762. learning CW

Yahoo group: dxsoft
Date: 2010-10-06 00:07:00 UTC
From: gjnmerock1@cox.net
Topic: 4762 Message: 4762

I and a small group are trying to learn CW. I'd like to try to connect my MFJ-557 paddle earphone jack to my laptop mic port and use CWget to see what I am keying in.

I've tried several settings, but it can't seem to distinguish what a "k" is. It shows "ne" or "ae" and seldom shows a "k". Most of the time an "i" shows as "ee".

Our speed is currently VERYslow and we'd like to be able to see what we are keying in to build our confidence and increase our speed.
Perhaps there is some other program to do this?

Any help would be appreciated.
Mike

4763. AAVoice issues

Yahoo group: dxsoft
Date: 2010-10-06 13:25:48 UTC
From: lu7hz
Topic: 4763 Message: 4763

Hi All,

I'd installed my registered version of AAVoice (v1.4.8.0) and to my surprise the program cames with no help nor readme nor any documentation whatsoever.

Reading the forum entries related to AAVoice I was able to recover some very basic macro definitions and bits and tips about the usage of the .INI file.

Although this information was enough to make it work most of the functions read on the articles doesn't work.

I.E. References are made to a \SOUND directory with samples coming with the program which is not the case when I downloaded it.

I.E. References are made to the callsign or rst fields being spoke when using the appropriate macros; this doesn't work in my case.

I.E. References are made to the integration with AALog or AATest which are sparse and confusing, nothing concrete in terms of documentation much less in terms of a help.

I believe the program is cheap still it is paid, and the documentation provided is clearly substandard and insufficient to make the program perform it intended scope.

Perhaps I'm just missing to download something else from somewhere else and I would certainly appreciate information in that direction if available.

I look forward from some word from the authors on how to address the above issues.

Thanks. Pedro LU7HZ

From: lu7hz
Topic: 4759 Message: 4764

I don't really get it.

I'd registered versions of most of the programs supported in this forum and have posted what I believe are reasonable comments here related to the programs, issues faced during their usage or suggestions for improvement. No off-topics.

And I'm still being moderated message by message.

And this guy just post this nonsense apparently without any moderation from anybody.

How comes?

On OT piece of advice. Don't start slow it would ceiling yourself at low speed. Start fast, at 20 WPM or so, with plenty of space between characters and get used to the sound then reduce the interspaces.

G4FON might do it.

It might be a problem of timing.

First off DON'T learn dots and dashes!!! learn the sound of the character, and don't send the character at 5 WPM send the character at 10 or 12 to start and space it out to 5 or 6 WPM we call that the Farnsworth method. That way you will learn the SOUND AND RYTHEM of each character and in a short while you will start to recognize the sound of a few short words.

From: Alexander Anipkin
Topic: 4763 Message: 4767

Hello lu7hz,

Wednesday, October 6, 2010 , you wrote to me:

here is text from file located in AAvoice folder, I really do not know
what I can add here:

For functioning it is necessary sound card. Program is
delivered with the minimum kit of sound files basing in \sound directory.
Rest files to to you needed to prepare itself, having written them in
wav format by means of any software programs (for example "Sound recorder"
from Win9x kit)

The handle of the transceiver (PTT) is made through one of the
COM-ports.

The program uses the configuration file AAVOICE.INI (in the working
directory). Here is an example of the configuration file:

```
========= cut ========
[Config]
PTTPort=1
PTTLine=1
ExternIniFile=aalog.ini
ExternIniSection=QSO

[Macroses]
Macro1=~[iCall]
Macro2=~[fcq.wav]
Macro3=~[fgoodluck.wav]
Macro4=~[f4.wav]
Macro5=~[f5.wav]
Macro6=~[f6.wav]
Macro7=~[f7.wav]
Macro8=~[f8.wav]
Macro9=~[f9.wav]
Macro10=~[fa.wav]
Macro11=~[ec]~[p40]~[er]~[rx]
Macro12=~[tx]~[ec]~[p40]~[er]~[rx]
========= cut ========
```

PTTPort - is the hardware port being utilized for transmitter
control.
Possible values:
0 - no port is not used;
1 ...4 - COM1...COM4 ;

PTTLine - determine the signal lines of the port being used.
Possible values:
1 - RTS;
2 - DTR;
3 - RTS and DTR;

ExternIniFile - name of the additional configuration file,
ExternIniSection - name of section in this file. The additional
configuration file is used in macrosequences (see below). Pay
attention that, if the path to this file is not entered, it is searched
for in the Windows directory, but not in the current directory.
When using the AAlog logger program it is helpful to specify the name
of its configuration file (aalog.ini) and the name of section "QSO".
It will allow the use of the values of the log fields for the current QSO
in macrosequences.

KEYBOARD MACROS AND MACROSEQUENCES

Keyboard macros are inserted into the input window (in a place
indicated by the cursor) by pressing a function key F1... F12 or at a
'click' on the appropriate button. In turn, keyboard macros may contain
macrosequences. Macrosequences start with a character string "~[" and
are ended by the character "]".
Sound files must bases in /sound subdirectory.

Here is list of macrosequences:

~[fFilename] - to insert contents of the file Filename.
~[iField] - to insert value of a field Field from the
additional ini-file. A filename and section
of ini-file are defined by parameters
ExternIniFile and ExternIniSection in the
file AAVOICE.INI .
~[ec] - to insert value of the "Call" edit field.
~[er] - to insert value of the "RS" edit field.

~[tx] - to switch TX on and to switch "pause" off.
~[cl] - to clear the buffer.
`[rx] - to switch TX off.
`[p<number>] - pause on <number> milliseconds.
~[rp<pause>:<number>] - repeat macros string for <number> times with
delay on <pause> milliseconds. This macro can be use
on the end of macros string only. If <number> is equal
to zero then macros string repeat permanently until press
ESC or click Stop button.

Condition of distribution and using of program are given in a file
"license.txt" .

MICROPHONE AND VOLUMES REGULATORS

If the Mike button is clicked then any played macros would stopped and
transceiver would turn on to TX mode. Volume of the microphone

and sound card can be changed by the volume regulators in the Volume
regulator window.

l> Hi All,

Thank you for the reply.

Well to add this information in a small help of the program or attach it to the release as a README or similar won't hurt.

I did explored entries in the forum but not in the files section.

The copy I have of AAVoice (and the one I did applied the registration to) didn't come with a \SOUND directory; is there a place where I could get the contents of that directory without reinstalling the software?

Thanks, Pedro LU7HZ.

Hello lu7hz,

Thursday, October 7, 2010 , you wrote to me:

Look like you download only aav148.zip. This is upgrade only. You need to
download install package. Just backup you current folder install
AAVoice and copy you files again.

l> Thank you for the reply.

Topic: 4763 Message: 4770

I really like Aavoice it is very simple to use.!

I have used Aavoice since the first version without "any" problems. As a matter of fact Aavoice has been only way since 2000 to work new countries on phone.

There is one problem with version 1.48 vs. ver 1.46 you can't stop (TX) transmission immediately if you have pushed the F-key but you must wait until the whole wav.file is transmitted. Many times my fingers are faster than my brains. So I am sorry if I am calling DX although it has answered for someone else. My fingers my fingers.

My own sound files (recorded with windows own recorder) like my call, cq etc.are in the same sound directory as all other wav. files and it is just under Aavoice directory.

4774. Problems with AAVoice using Windows 7

Yahoo group: dxsoft
Date: 2010-10-12 00:33:18 UTC
From: lu7hz
Topic: 4774 Message: 4774

Hi,

Using Windows 7 Starter edition on a new machine where I'm consolidating all the station software the version just downloaded from the dxsoft site installs ok.

But when trying to run it a message is shown

"List index out of bounds (1)"

Clicking Ok AAVoice is started but when any function is activated
the message

"Access violation at address 00479635 in module AAVoice.exe. Read of address 00000000".

No function can actually be used, even trying to exit yields that message, the only way to terminate the program is by killing it's process externally.

Any idea?

Thanks, Pedro LU7HZ

Just copy/paste your registration code into reg-window of CwGet.
I just have resent reg-message to you.

4779. Follow up on questions

Yahoo group: dxsoft
Date: 2010-10-15 14:00:33 UTC
From: lu7hz
Topic: 4779 Message: 4779

Friendly follow up on the two questions that had not been addressed.

1) Any clue on the failure of AAVoice under Windows 7? It's a catastrophic failure with no aparent workaround. The program doesn't work.

2) Any insights on the way to use the rig defined as RIG2 in OmniPort from OmniPort?

Thanks, Pedro LU7HZ

do you install 2.4.6 and replace aavoice.exe by new 1.4.7?

l> 2) Any insights on the way to use the rig defined as RIG2 in OmniPort from OmniPort?
AALog 3.0.1 will control both rigs

l

I did first installed the copy I had of AAVoice, upon failure I downloaded a fresh copy out of your web site and the problem repeated itself. Any suggestion on how to proceed?

> l> 2) Any insights on the way to use the rig defined as RIG2 in OmniPort from OmniPort?
> AALog 3.0.1 will control both rigs

So does CWGet, but this is not my question.

OmniPort is a stand alone program allowing you to control the frequency of a rig and the mode (among other things) based on a public COM called OmniRig.

It has defined a RIG1 and a RIG2, but from OmniPort itself only RIG1 can be accessed and operated. Is it crippled, buggy or just bad designed having a setting definition that the program can not use?

Frankly it's hard to believe that this question needs to be posted 3 or 4 times to get this kind of answer from the authors.

Regards, Pedro LU7HZ

> Define this rig as RIG1...

Obviously I do have a RIG1 and a RIG2, do you mean that Omniport despite of having RIG1 and RIG2 only handles the RIG1? Why you put the RIG2 into the settings then?

And what about the question on AAVoice under W7.

Thanks, Pedro LU7HZ

There is not such software as "Omniport".

There are two software - OmniRig and Hamport.

OmniRig is rig control engine. It can handle two RIGs and have settings
for them - RIG1 and RIG2.

HamPort is simple software which work via OmniRig engine.
It always use RIG1.

Yes, it is really disadvantage. I hope Alexander will fix it in future version...

l> Why you put the RIG2 into the settings then?

OmniRig has these settings, not Hamport.
Hamport just shows them...

Yes, sorry I'm talking about HamPort.

.> HamPort is simple software which work via OmniRig engine.
> It always use RIG1.

And Ok. After several notes it's finally understood the program doesn't support RIG2 even showing it.

.> l> Why you put the RIG2 into the settings then?
>
> OmniRig has these settings, not Hamport.
> Hamport just shows them...

Nothing really forces you to use OmmniRig's setting panel, you can use your own. Using Omnirig's it's just confusing.

Dear Alexander

I followed your instructions.
However, Before install of NewDXCC.bat, I had 310 countries WKD and 309 CFM

Now, I have 308 WKD and 307 CFM
References listed = 340

I do not understand.
Is it necessary to run "Update Awards Statistic" ?
Your instructions do not mention it.

Dear Alexander

I just now ran the Award Statistics Update and I still have 308 WKD and 307 CFM

I did work EVERY station in PJ, PJ2, PJ4, PJ5, PJ6, PJ7. In fact I have Clean Sweep on ALL station/bands/modes.

So, I expect that Award Statistics should show
312 WKD and 309 CFM
I did have 310 WKD and 309 CFM as of 2 days ag when I worked ZD9AH for my No. 310

Hi Dan

Remember that 2 countries have been deleted, which means they do not count
any more, and 4 new ones added.

Regards - OZ1KKH Erik

Erik

I know that.

Which means that my DXCC count should increase x 2 not DECREASE x 2

I should see 312 worked and I see 308 wkd in Awards List

Hi Jack

If you did take a backup of the file Alexander wrote, you can copy the file back into the AAlog folder and run the bat-file again (only once).
I had the same problem with 2 of the PJ due to the error message which made me run the program twice.

The above procedure worked for me.

Hello Jack,

Sunday, October 17, 2010 , you wrote to me:

J> ?

J> Tnx but I did not make a backup so I,m stuck with It

1. backup current aalog.gdb
2. download clear aalog.gdb from
www.hamport.com/download/aalog-gdb.zip
It already updated
3. copy clear aalog.gdb to aalog folder (CHECK TWICE ARE YOU HAVE
BACKUP!!!!)
4. create new log.
5. go to "tools | merge log from another database" menu. Select your
backuped database and load contacts.
6. Rescan database.

Best regards,
Alexander mailto:aia@...

From: Dan Schaaf
Topic: 4789 Message: 4804

Erik

I have worked ALL new ones, all bands all modes.
So I expect increase of 2

Now, after having updated AALog with new DXCC list, I have workes some more of the PJs.
I now wonder what happens to my log data.
Some of these logged QSOs give me arror when I log it, yet, they do go into the log.
So, the log is preserved, but I do not know if the prper countries are credited in AALog

After the update, some of the logged QSOs are still showing in RED in Bandmaster which tells me that there is a problem.

Hello Alexander,

Sunday, October 17, 2010 , you wrote to me:

I found problem. If you already upgrade your database by scripts
please download only this archive
www.hamport.com/download/aal302-1142.zip

This is new aalog.exe only.

As bonus- support of the 2-nd RIG. You can activate it in the New QSO
window configuration

Full install and upgrade packages coming soon

From: Erik Nielsen
Topic: 4789 Message: 4809

Hi Dan
I can see, that when I write a PJ2 callsign in the New QSO window it says Unknown so I saw that Alexander has found an error in the update, so maybe that has to do with that.
If I write one of the other callsign it finds the country, but that could be because I worked them before the update and changed manually to the new country.

Maybe we should see what Alexander comes up with

Hi Jack

I did install v1142 and it seems to work. I am scanning data base again to see if I get all 4 entities recognized now in Awards Tracker.

Erik

Ran "Update Awards" but still 1 Country Short.
Shows 311 instead of 312 countries worked.

Yes, it was a PJ2T QSO that was not being recognized. So, I manually set the Territory to Curacao and now I have all the correct reporting in Award Tracker.

Hi Alexander

I downloaded build 1142, renamed the old version of the program and unzipped
the new to the program folder.

I still see a problem with PJ2 which I have not worked as the new country.
If I write only the prefix PJ2 it says Curacao, but if I add a suffix it
says unknown.
If I write PJ2T it shows the old qso's back in time but still unknown.

Should I do any more to get it to work ?

I had the same problem, so after I logged PJ2, I then opened up the QSO and set Territory manually.
Then all was OK again.

Dear Alexander

I have another problem.

When I run Awards Tracker, many of my QSOs do not show in the tracker for
PJs

Is it necessary to manually set Territory for each of the PJs that I worked?

AA> I working under this problem. Please wait a bit.

First step is run one more script
www.dxsoft.com/download/dxcc-upd.zip (This is recommendation for ALL)

By some reason no "manual set" mark for some ambigiouse callsigns in
your log. Need check your log more detailed.

Best regards,
Alexander mailto:aia@...

4822. AALog - hoping for a fully updated version

Yahoo group: dxsoft
Date: 2010-10-19 15:33:38 UTC
From: Erik Nielsen
Topic: 4822 Message: 4822

Hi Alexander

I did a fallback to version 3.01.1141 hoping that You will come up with a full new version to download when all the issues on the prefix updates for PJ is solved.

I think things were getting a bit out of control with all the scripts and temporary install of only an new exe-file and still some problems.
My Vista was not happy about the new program telling me that it did not know who issued the program and asking if I was sure i'd like to run the program.

So for now I can live with the fact, that PJ's is not correct. and my DXCC Awards are not correct either.

I am looking forward to see a complete version taking care of the updates with all issues solved.

4823. AALog 2.46 - PJ problems

Yahoo group: dxsoft
Date: 2010-10-22 18:16:34 UTC
From: Wim
Topic: 4823 Message: 4823

AALog 2.46

Found some problems here entering new entities PJ4 and PJ5,6.

DXCC-list
Changed PJ2 and PJ7 to new entity names, no problems.
Added PJ4 and PJ5,6 in DXCClist no problems.

Prefix-list
Deleted all additional prefixes from PJ2 and PJ7, no problems
Added PJ4 in prefix list, prefix-list gets corrupt.
Same for PJ5,6 after restoring databases.

Every time I add PJ4 of PJ5(PJ6) to prefix-list it goes wrong. Part of prefix-list disappears.
Anyone else found this problem? Is there an update for ver. 2.46 also?

I created following workaround:
Added dummy prefix in prefix list for Bonaire: 1U and linked it to PJ4
Added dummy prefix in prefix-list for Saba,St.E.: 1V and linked it to PJ5,6.
Now new qso's with PJ4 resp. PJ5, PJ6 are recognized rightaway and Award Manager (DXCC) is FB.

Hello,

Two questions.

1) Did you had any development or concrete recomendation on how to proceed with the inability of AAVoice to work under Windows 7 reported few days ago?

2) What is your recommendation regarding the usage of AATest during the CQ WW SSB 2010, is an upgrade needed to address some of the new prefixes?

Thanks, Pedro LU7HZ

I start big upgrade of aavoice now. I think no new version before cq
ww will be available.

What version you run now?

l> 2) What is your recommendation regarding the usage of AATest

Hi Pedro

Abt. AATest and the new PJ prefix. I just downloaded a new CTY.DAT file and
replaced the old one with the downloaded one,
and it recognized all 4 new prefix.

From: Bert
Topic: 4830 Message: 4830

Hello, where I can download AAVoice version 1.4.8.0? I have the old 1.4.6 and it's what I found in DXsoft site.

4831. What is the Problem?

Yahoo group: dxsoft
Date: 2010-10-26 11:02:30 UTC
From: Jujor
Topic: 4831 Message: 4831

Hi Greetings.
I wonder, what is the reason for which I receive messages from this forum, but I think I do not get the messages I sent to this address.
Some time ago I receive messages, but I'm tired of sending test and answers and what I send, not receive anything, I tried to query for Radio and I have not received anything, so I think that no one has received my question.
If possible I make a clarification, because if I have no right to send my opinions, I would be low in this direction.
My apologies, greetings.

¿ Cual es el Problema ?
Hola saludos.
Quisiera saber, cual es el motivo, por el cual, yo recibo los mensajes de este foro, pero me parece que yo no recibo los mensajes que yo envio a esta direccion.
Hace tiempo que recibo mensajes, pero estoy cansado de enviar test y respuestas y de lo que yo envio, no recibo nada, he intentado hacer una consulta de Radio y no me ha llegado nada, por lo que creo que nadie ha recibido mi cuestion.
Si es posible me hacen una aclaracion, ya que si no tengo derecho a enviar mis opiniones, me daria de baja en esta direccion.
Mis disculpas, saludos.

4836. AALog interface or API

Yahoo group: dxsoft
Date: 2010-10-27 22:18:36 UTC
From: lu7hz
Topic: 4836 Message: 4836

Hi,

Is there any AALog interface or API I can use (with a development of software in my own) to produce a live interface to post entries in the DX Cluster?

It's kind of boring to need to post the entries manually, but perhaps there is some other way I just don't know. Anywone?

Second closest good thing, is there a documentation of the format for the QSO database or methods to access it by a separate program (read only)?

Thanks, Pedro LU7HZ

No problem to implement it.

l> It's kind of boring to need to post the entries manually, but

You want post every your contact to dx cluster? I think this is not
good idea.

l> Second closest good thing, is there a documentation of the
l> format for the QSO database or methods to access it by a separate

AAlog use standart firebird database format. By default it use single
connect engine. If you want use database in the same time by other
application you need to setup complete firebird sql server.

Best regards,
Alexander mailto:aia@...

Ok. Good to know. How?

It's not a good idea to type them entirely by hand either. Obviously a button on the new QSO dialog that allows to selectively post the new QSO into the DX cluster (assumed the DX Cluster dialog is opened, and the cluster connected) would be welcomed. But in order not to depend from the authors an external means can be developed if the program doesn't provides this functionality.

Do you read help file? :) You can configure up to 7 buttons in the new
QSO window for quick operation (send spot included) or can select qso
in the main grid right-click it and select fuction from menu

Best regards,
Alexander mailto:aia@...

No, I don't read the help file because there is no help file. The help button doesn't work on my installation and the about button just carry the program Id. There is no other external file (.hlp or other) that contains any help. What help file are you talking about?

The good news seems to be that the functionality to trigger the post in the DX Cluster is there only hidden, I can see it by right clicking although it's cumbersome to need to go there to create a spot.

So where is the information needed to activate it as a button on the new QSO dialog?

Thanks, Pedro LU7HZ

Hi,

With the knowledge it's there I finally figured out how to configure a button and in particular one to send to the DX Cluster.

But it's fair to said the program doesn't come with any help file other than Russian and Italian; being able to figure out my way with Italian it doesn't mention a thing about the configuration of buttons on the New QSO dialog.

No ideas. In US you do not need change callsign when you move to another
location.

Best regards,
Alexander mailto:aia@...

The second day was the same, the CQ Zone proposed by AATest was wrong about half the time.

This behaviour doesn't happen in any other country, where the suggestion of AATest was consistently right.

Yes, ARRL and FCC rules have not changed yesterday :)

l> This behaviour doesn't happen in any other country, where the suggestion of AATest was consistently right.

USA stations can leave old callsign after location changing.
And them really don't change callsings, as you see...

More over, there are only few countries, which have several CQ-zones.
USA, Russia...

Yes, but two samples makes for an "statistically valid survey" now.

There were almost no Russian stations that I was able to contact in 10 Mts so if it happens the same the problem went unnoticed.

Pedro, LU7HZ

4848. AAVoice

Yahoo group: dxsoft
Date: 2010-11-01 17:29:17 UTC
From: lu7hz
Topic: 4830 Message: 4848

Hello,

Having used the AAVoice software during the CQ WW SSB contest I can say the performance is adequately fit for the purpose.

I'd noticed the lack of a repeating message feature (similar to the beacon available in CWType) which can be useful in long segments of the contest.

The second thing I'd observed is an odd behaviour where if you press a given F key at the same time with clicking on the button for it the macro gets somewhat screwed up. It appears on the dialog somewhat mutilated and everytime you hit anothe message it gets added to the macro on the dialog whilst it's being transmitted. The workaround is to paint the segment of the macro and hit the Tx button with no further key or mouse click involved a message is transmitted and the dialog is cleared.

Finally it's important if in future versions you make the playing of the sound asynchronous with the program operation as opposed to today where the program freezes whils the play is executed.

For the program to work under W7 would be important too in a not very far future.

Thanks, Pedro LU7HZ

4849. AATest functions

Yahoo group: dxsoft
Date: 2010-11-02 12:24:30 UTC
From: lu7hz
Topic: 4849 Message: 4849

Hi,

Having used AATest for the first time on a full CQ WW I can tell it works appropriately for the purpose.

I'd noted the lack of the capability to post on the cluster directly (or as in AALog it's there but not documented).

The configuration of the background colours of the cluster telnet dialog doesn't work nor the font change on it.

A big lack is the lack of a Cabrillo import capability.

Some additional info, such as easily count the number of countries and zones (instead of combined) without the need to run a report would be handy.

Subject: [dxsoft] AALog v3.0.3.1143 is available

Dear dxsoft users,

I just upload new version to web-site.

full package
www.dxsoft.com/aal3.zip
www.hamport.com/aal3.zip

update package:
www.dxsoft.com/aal3-upd.zip
www.hamport.com/aal3-upd.zip

fixed new DXCC issues and added 2 radio support

Best regards,
Alexander mailto:aia@...

4854. Worked All States - abbreviation

Yahoo group: dxsoft
Date: 2010-11-05 16:13:29 UTC
From: n0rq
Topic: 4854 Message: 4854

I was looking at Awards -- Worked All States -- noticed that the abbreviation for Nebraska is shown as NB. Nebraska is really NE -- I believe NB stands for the Canadian province of New Brunswick.

4855. CWGet slow tuning

Yahoo group: dxsoft
Date: 2010-11-06 01:40:31 UTC
From: lu7hz
Topic: 4855 Message: 4855

Hi,

I do use CWGet as a (very good) filter and not really to decode.

Typically I do work DX with a 140 Hz B/W and it's excellent; typically I'm a DX to certain countries so people trend to pile up on me.

However when I call CQ my own signal is picked up and it's quite strong; after I cease to call the spectra shows the "ghost" of my signal slowly fading down and lasting few seconds till completely dissapearing.

If during that process a station calls me off my frequency (and thus more than 140 Hz appart) I'm having troubles to tune up on zero on her.

Clicking on the new signal while it's strength is still lower than the ghost of my signal still decreasing have no effect, the CAT isn't activated to zero on the new signal.

It's only when the ghost of my own signal decreases to a point where it's lower in strength than the responding signal that I can center her on the middle of the filter bandwidth with a click.

Is there any way to avoid this effect and to make the CAT go to the position (frequency) clicked no matter what it's in there?

Thanks for the tips.

Regards, Pedro LU7HZ.

l> Is there any way to avoid this effect and to make the CAT go to the
l> position (frequency) clicked no matter what it's in there?

Yes. But you need to read documentation :)

===
When the option "Setup->Interface->AFC at mouse click" is selected CwGet immediately adjusts
the RX frequency to the nearest station after every mouse click on the spectrogram regardless
of the "AFC" button state. But this action is not made after click on the ruler under spectrogram.
===

So there are two way - to reduce "Global AFC" value or
to click at frequency ruler _under_ spectrogram.

> Yes. But you need to read documentation :)

Well, I read the documentation but lets concede which is a little obscure on what clicking under the spectrogram does and in particular it doesn't say a thing about this problem.

The program is not reacting to a signal but to the ghost of a signal that ceased already.

> So there are two way - to reduce "Global AFC" value or
> to click at frequency ruler _under_ spectrogram.

Yes, clicking under seems to be a workaround.

Thanks, Pedro LU7HZ

4858. Re: [dxsoft] Re: CWGet slow tuning

4859. SeaTTY 2.31 is published

Yahoo group: dxsoft
Date: 2010-11-06 16:10:23 UTC
From: Sergei Podstrigailo
Topic: 4859 Message: 4859

Hello All,

I just have uploaded SeaTTY 2.31 to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

--
Best regards,
Sergei

==========
SeaTTY versions history

V2.31
The "Setup / Other / Start SAME message by 1050 Hz tone" option was made.
V2.30
More settings for spectrogram and oscillogram colors were made.
V2.21
Options for tuning auto start / auto stop parameters of FAX mode were made.
See "Setup/FAX" page.
V2.20
Message filename shows time of message start, not time of message end now.
The "Setup / Other / EOM timeout in SAME" option was made.
A bug was fixed - a message with station ID in filename couldn't be really deleted by
"Delete" command.
"Auto start" and "Auto stop" procedures were slightly optimized in HF-FAX mode.
V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.
V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.

4862. Tuning mode on CWGet

Yahoo group: dxsoft
Date: 2010-11-08 12:34:10 UTC
From: lu7hz
Topic: 4862 Message: 4862

Hi,

While using CWGet on several contest now (as a filter) I'd noticed it support the two CAT control modes needed during a contest but it has a slow and cumbersome way to switch between both.

While working S&P it's important to click (either over or under the ruler as discussed on previous entries) on a station and get the transceiver CAT place it on the same frequency.

However working CQ it's important to stay in the same frequency where everybody is listening to us and adjust the reception of a given station (typically off by +/- 300 Hz or so) but without moving the transmitting frequency; with a filter at 140 or even 70 Hz wide this movement is mandatory otherwise the station can not be heard correctly.

Both modes can be achieved by going to the Setup/Tuning dialog and placing the CAT interface in either VFO or None; but the switch isn't fast and there is no a visual clue on what mode the CAT control is.

Perhaps there is a key shortcut to it only that I didn't read the documentation enough or the documentation doesn't mention the key combination. It would also be important to have a visual clue somewhere in the main dialog in which CAT mode the program is (today isn't showed up anywhere).

Perhaps even a more visible and solid button on the main dialog, but that would be a larger change I guess.

Any help or workaround?

In really CAT status is shown at status line of CwGet (in 8th cell).

l> Perhaps even a more visible and solid button on the main dialog, but that would be a
larger change I guess.

You suggestion is reasonable, will think about it.

l> Any help or workaround?

I just click "A=B" and "TX B" buttons at my rig before starting CQ.

And click "RX A" (it means "both RX and TX from VFO A") before S/P.

CAT changes VFO A freq, but don't changes VFO B ...

Sounds ok as a workaround since I do typically do CQ with one OFV and S&P with the other.

Dear Alex

Will Bandmap use Omnirig for CAT Control?

Will Bandmap also have Spot List like Bandmaster?

Can Bandmap be used alone or only with AALog?

Can you make a version of Bandmap to run on Windows Phone 7 under .NET Framework?
I would like to have similar to Bandmaster on my Windows Mobile Phone.

4873. TrueTTY 2.81 beta is published

Yahoo group: dxsoft
Date: 2010-11-12 14:30:13 UTC
From: Sergei Podstrigailo
Topic: 4873 Message: 4873

Hello All,

I just have uploaded TrueTTY 2.81 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.truetty.com/truettyb.zip

--
Best regards,
Sergei

==========

TrueTTY Versions History

V2.81
Right mouse button click (or left mouse button with "Shift" key pressed) make
TrueTTY to do fast decoding of one-minute prehistory of signal at selected frequency.
By "Replay" button one-minute prehistory of current signal is fast decoded now.
V2.79
DTMF-decoder was improved.
V2.78
PTT-interface settings were rewritten.
Now PTT can be controlled via:
- COM-port;
- standard LPT-port;
- LPT-port with non-standard addresses (PCI-cards etc.);
- via OmniRig by COM-port control signal pins;
- via OmiRig by CAT-commands;
- via WinKey.
An option "Setup/Tuning/Wheel tuning speed" was made.
A bug with "`[pa]" macros was fixed.
Callsigns and numbers recognition was improved in the "Catch word in contest mode".
V2.76
QPSK-63 mode receiving and transmitting were made.
V2.75
Option "Use mouse wheel for tuning" was made.
A bug was fixed - "Help/Contents" menu didn't work in V2.70.
V2.70
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
/S parameter of command line is not used now.
[...]

If you have two soundcard, you can run two copies of TrueTTY with
different settings.

But enable to select mono/left/right channel of soundcard is good idea too,
will take it into mean...

I do not have 2 soundcards available for second window .

But I suggest that if you can do it, then add the following:
1) switch to open or close second window.
2) ability to set second window for Split DOWN or Split UP
3) Ability to click on VFO B window signal and then VFO B can be
automatically tuned to the clicked signal. Great for working pileups and can
find the "sweet spot".

4877. ARRL 10 Mts Contest

Yahoo group: dxsoft
Date: 2010-11-15 12:52:15 UTC
From: lu7hz
Topic: 4877 Message: 4877

Hi,

The new edition of the ARRL 10 Mts contest (early next December) has a change on rules by considering the 32 districts of México as multipliers (like a US or CAN state) as opposed than previously where the XE-Land were just like a DX location.

Since AATest supports the ARRL 10 Mts contest are you planning to introduce support for this rules change?

Thanks! 73 de Pedro LU7HZ

Topic: 4878 Message: 4878

Hi,

I'm trying to build a macro to send <CallSign> TU if the callsign has been corrected after the exchange and just TU is no correction has been made.

When I use `[imCall] TU as a macro the callsign is always sent.

In fact I see no difference on using `[imCall] or `[iCall] (I'd tried both ` and ~ in front.

Any suggestion?

73 de Pedro, LU7HZ

4879. Usage of `[jName]

Yahoo group: dxsoft
Date: 2010-11-16 01:31:43 UTC
From: lu7hz
Topic: 4879 Message: 4879

Using `[jName] as part of a CWType macro doesn't gets replaced by the string at the Name field on the AALog QSO, it's just blanks.

Is there a way to send what is in that field? Is any special configuration needed to enable this?

Thanks, 73 de Pedro LU7HZ

4880. SeaTTY Platform

4883. 3 questions

Yahoo group: dxsoft
Date: 2010-11-20 10:57:24 UTC
From: lu7hz
Topic: 4883 Message: 4883

Hi,

I did three questions, perhaps you might find a spare spot of time to address them.

1) How to use the content of the Name field in AALog as part of a macro in CWType, using `[jName] as mentioned in the manual doesn't work. A mention is made to the .INI file in the \Windows diretory, what CWTYPE.INI or AALOG.INI? the first doesn't exist and the second isn't updated by AALog but by AATest only.

2) What is the difference between `[iCall] and `[imCall] in AATest, the manual says that while the first is always populated with the Call field the second is only when the call field has been modified. Actually both sends always the call field. So what is the difference? I'm trying to send the content of the call field only if modified after the SEQ NR has been entered (to recognize a correction in the call) but
not to send the call again if correctly taken in the first pass.

3) Are AATest going to support the new rules on the ARRL 10 Mts contest in time for this year contest?

Thanks, Pedro LU7HZ

l> CWType, using `[jName] as mentioned in the manual doesn't work.

It is really a bug. I found that AAlog fills this value if input focus
is moved to callsign field and then moved from it.

From: lu7hz
Topic: 4883 Message: 4885

Thank you for the answer.

Well, in it's present form it's unusable as a feature then. It is actually a little worse because since the name can not be taken from the "Name" field (which in turn is populated automatically from the QRZ.com database I've) I've to type it in order to be incorporated into the message to be sent (thru the ´[en] macro) but doing so I override the field on the QSO window creating a local db which in most cases is less complete and comprehensive.

What about the other 2 remaining questions? :-)

imCall is useful when you CQing in the contest. It is empty if you do
not change call after send serial and has value if you change call.

Example:

- CQ test de RZ4AG

- de LU7H....

- LU7H TU 599 16

- de LU7HZ LU7HZ 599 13

I go to Call field and correct call to LU7HZ

if you configure macros like `[imCall] tu QRZ?
then AALog will send macros like

LU7HZ tu QRZ?

If I received your call right from first call the macro will

tu QRZ?

l> 3) Are AATest going to support the new rules on the ARRL 10 Mts

TU vry much Alexander,

I misunderstood the imCall as to be populated when you change the sequence, I do know now how it works.

Looking forward for the updated version of AATest then.

4888. Re: Tuning mode on CWGet

Yahoo group: dxsoft
Date: 2010-11-21 02:17:57 UTC
From: lu7hz
Topic: 4862 Message: 4888

It's not a workaround since it doesn't work the way you said.

Either with VFO A or B if "Tune Rig by" is set to VFO clicking on the spectrogram changes the frequency. The only way to tune a station without moving the transmiting freq is to set "Tune Rig by" to None.

Hope you can include some feature or shortcut on incoming releases to make this handling more straightforward.

On my TS-870S if I set RX to VFO A , TX to VFO B and
CwGet to "Tune by VFO", only VFO A is tuned by CwGet.

Dear sergei

Can you add feature to make VFO B change with mouse click in stead of VFO A ??? Most Yaesu Radios have DSP on VFO A for Receive and no DSP on VFO B for transmit.

Dear Sergei
In the case of working DX Split, we listen to the DX on VFO which has the DSP filtering.
We transmit on VFO B Split up or down, usually up.
So, in the case of DX Pileup, if I can see up the band where the pileup is moving, I would like to click on an empty spot near the pileup at the precise sweet spot.

I think to do selecting of left or right stereo channel.

It leave to run two copies of TrueTTY with different settings -
one with left channel and second with right.

From: lu7hz
Topic: 4862 Message: 4897

It seems it's a feature unique for the TS-870S since neither the FT100D, FT817 or IC706 can assign a VFO exclusively to either receive or transmit; each VFO can transmit or receive at any moment and thus your workaround doesn't work.

The closest thing to what you refer is to work in split mode (transmiting with one VFO and receiving with the other), but this completely block you to use them separately which in a contest is a no-no.

This makes relevant some sort of shortcut or facility to quickly change the tuning mode with the CAT because the way it's now is really cumbersome.

4899. AATest's Cluster window

Yahoo group: dxsoft
Date: 2010-11-30 00:05:48 UTC
From: lu7hz
Topic: 4899 Message: 4899

Hello,

I'd used AATest at the CQ WW CW 2010 contest over the past weekend, the program behaved quite well.

I'd took some notes about topics that I didn't found a way to do and perhaps there is some documentation that I just skip to read and therefore some help might be useful.

Cluster window colors, it seems the window doesn't react to the configuration of colors selected thru the config/properties dialog. I'd tried to change the background to black to ease up on the glaring over long hours but with not success. The configuration is accepted but the background color doesn't change.

Also it's extremely important to be able to see who spotted a particular station; it's irrelevant to see a JA station spotted by a nearby JA station; the pair is what conveys the information. A PY station being spotted by a JA station might actually be good news for LUs in terms of propagation even if the PY station itself isn't an exciting one in terms of contest points. I saw no way to see who did the last spotting (other than to use the command window to check one by one with a SH/DX command which isn't handy).

Another important feature that I didn't figured out how to make it work is to integrate the cluster with the CAT; double clicking on the station in the cluster window actually fills the AATest's new QSO window with the relevant data but didn't integrates into changing the frequency of the transceiver thru the CAT as AALog does when configured to.

Thanks, Pedro LU7HZ

4900. HamPort topics

Yahoo group: dxsoft
Date: 2010-11-30 00:07:36 UTC
From: lu7hz
Topic: 4900 Message: 4900

Hi,

Have used also extensively HamPort during the contest, I wonder whether there is a way to see the VFO in use on the main dialog of HamPort?

There is not an easy way other than to actually look at the transceiver which isn't comfortable at least on my configuration of space.

Thanks, Pedro LU7HZ

4901. CWGet tuning

Yahoo group: dxsoft
Date: 2010-11-30 00:12:09 UTC
From: lu7hz
Topic: 4901 Message: 4901

Hi,

Having tested the workaround suggested in order to allow CWGet to move or not the VFO when clicking on the spectrogram I can tell the workaround doesn't work with my equipments so it's not universal, it might depend on specific features of some equipments which aren't on others.

The only way I manage to work around the problem was to actually go navigating Setup/Tuning/(whatever) so it requires three clicks to do it and a considerable loss of focus while doing so.

If at all possible I would strongly recommend either a keyboard shortcut that circle thru the options available (first shortcut none, second VFO, third RIT and fourth back to none) or even better a click on the zone of the dialog where the status is shown.

Thanks, Pedro LU7HZ

4902. aalog3 and LoTW

Yahoo group: dxsoft

From: Sam Garbo
Topic: 4902 Message: 4902

Hi group -
Can anyone give me step by step instruction on what to do to download LoTW confirmations to aalog3?
I'm not a computer whiz and need the "LoTW QSL download for Dummies"!!
(I've studied the help files and just don't get it)
Thanks and 73, Sam K0VGB

Hello Sam,

Thursday, December 9, 2010 , you wrote to me:

SG> Can anyone give me step by step instruction on what to do to download LoTW
SG> confirmations to aalog3?
SG> I'm not a computer whiz and need the "LoTW QSL download for Dummies"!!
SG> (I've studied the help files and just don't get it)

You can find info in the help file:

Use File-Import option

When you import LoTW reports or eQSL.cc confirmation file AALog set
mark for confirmed contacts in special fields. AALog can download data
directly from LoTW and eQSL.cc websites if you wish. You can import
previously downloaded file too.

Dialog box for LoTW:
'Callsign' - call sign (login) used in LoTW (AALog uses current log call sign)
'Password' - your private password to access LoTW
'Save password' - mark this checkbox to remember LoTW password
'Uploaded after' - download confirmations uploaded from this date (AALog sets this value
for current date/time after the data of loading)
'Status' - current state of LoTW data exchange process

Best regards,
Alexander mailto:aia@...

Alexander

Is it necessary to save the LOTW downloaded file and then IMPORT to the LOTW log ?
Or is it done automatically?
I tried your instructions and I show in my AALog 3 LOTW Awards Manager that only QSLs were sent, not received. Color is still Orange on each QSO in Awards Tracker.

What did I do wrong?

Download software and install it at new computer,
then apply old reg-code there.

Dear Alex

OK,
it works now. I got error message many times " Save Data Error" when
updating Awards Statistics.
I do not understand " Save Data Error".
Then I go to Award Statistics Window and I see that the LOTW Icon is not on
the QSO which is flagged as "Save Data Error"
What is this mean ?

4917. Re: Re[2]: [dxsoft] aalog3 and LoTW

Yahoo group: dxsoft
Date: 2010-12-12 14:47:29 UTC
From: Erik Nielsen
Topic: 4902 Message: 4917

Hi Dan

I can see from your data that you need to specify an earlier date than
today's date when you fetch the data from LoTW.
In the dialog box there are a possibility to set a date in the field
'Uploaded after'.
I think you must set this to the earliest date in you log to be sure all
possible confirmations are retrieved from LoTW.
When you then download the next time as I recall then the date from last
download is remembered.

Good luck with the experiments :-))

Alexander, Thank you for adding Mexico's states to the ARRL 10 meter contest support in AATest. However I am seeing only the first 16 of the 32 states at the end of the list in the Multipliers window. The last state I see is XE-HGO. Is it possible that I am doing something wrong? 73, Rick

4920. TrueTTY 2.85 is released

Yahoo group: dxsoft
Date: 2010-12-16 13:44:13 UTC
From: Sergei Podstrigailo
Topic: 4920 Message: 4920

Hello All,

I just have uploaded TrueTTY 2.85 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

--
Best regards,
Sergei

==========
=====

TrueTTY Versions History

V2.85
Ctrl-U hotkey switches "Tuning Rig by" state between
"NONE" and last selected tuning method ("Main VFO" or "RIT").
After switching to RTTY mode speed and shift are not reset to 45 Bd / 170 Hz,
but are set to last values used in this mode.
V2.81
Right mouse button click (or left mouse button with "Shift" key pressed) make
TrueTTY to do fast decoding of one-minute prehistory of signal at selected frequency.
By "Replay" button one-minute prehistory of current signal is fast decoded now.
V2.79
DTMF-decoder was improved.
V2.78
PTT-interface settings were rewritten.
Now PTT can be controlled via:
- COM-port;
- standard LPT-port;
- LPT-port with non-standard addresses (PCI-cards etc.);
- via OmniRig by COM-port control signal pins;
- via OmiRig by CAT-commands;
- via WinKey.
An option "Setup/Tuning/Wheel tuning speed" was made.
A bug with "`[pa]" macros was fixed.
Callsigns and numbers recognition was improved in the "Catch word in contest mode".
V2.76
QPSK-63 mode receiving and transmitting were made.
V2.75
Option "Use mouse wheel for tuning" was made.
A bug was fixed - "Help/Contents" menu didn't work in V2.70.

4923. Getting started with CW Get

Yahoo group: dxsoft
Date: 2010-12-23 23:43:17 UTC
From: Richard S. Lindzen
Topic: 4923 Message: 4923

I have an Elecraft K3 and Signalink USB. All works well with Ham Radio Deluxe DM-780, but when I try to set up CW Get, and set my sound card to USB Codec (ie Signalink), I get the message:

"Attempted to open with an unsupported wave-form-audio format."

What am I doing wrong? Also, should the mode on the Elecraft K3 be set to Data A or to CW?

Help would be appreciated -- given that there seem to be no instructions for this software.

73 and Merry Christmas,

Dick

Tnx. Yup Windoz decided to take over the USB
sound card. Why does it do this? In any event,
the situation is correctable and CWGet is working.

4937. Re: [dxsoft] AALog v3.0.3.1143 is available

Yahoo group: dxsoft
Date: 2011-01-04 00:32:22 UTC
From: Dan Schaaf
Topic: 4852 Message: 4937

Dear Alex

I have tried many many times to make AAlog 3 work with bandmaster on 60 meter band.
I work and log a 60 meter contact but AALog does not send the proper color to Bandmaster.
For example, I worked CE1/K7CA on 5.4035 MHz USB yesterday.
After contact and logging, the call sign satys RED.
Today, the call sign is still RED in bandmaster on 5.4035.

What can I do ???

Dan Schaaf

4938. CwType 2.10 is released

Yahoo group: dxsoft
Date: 2011-01-15 10:16:07 UTC
From: Sergei Podstrigailo
Topic: 4938 Message: 4938

Hello All,

I just have uploaded CwType 2.10 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

--
Best regards,
Sergei

==

CwType Versions History
V2.10
A bug with configuration saving (if COM17...COM25 port is used) was fixed.
V2.01
A bug in the "Put Time Marks to a Capture File" option was fixed.
V2.0
Rig switching (SO2R support) works with WinKey interface now.
Options "Setup -> Text -> Put Time Marks to a Capture File" and
"Setup -> Text -> Use UTC Time" were made.
V1.92
A bug with manipulation speed saving was fixed.
V1.91
MOX settings works with WinKey now.
Maximal COM-port number is COM25 now.
V1.90
Beacon regulator defines not period, but pause between transmissions now.
Some improvements of speed changing macroses handling were made.
WinKey interface is supported now.
V1.86
Vertical scrollbar in Sent window was made.
CwGet works more correctly at 64-bits systems now
(it not tries to load 32-bit driver no more).
V1.85
Documentation was updated.
V1.80
"_" symbol is used as "short space" now.
Macroses `[rg1] , `[rg2] , `[rgs] , `[rgr] were made for SO2R support.
V1.78
Some problems of co-operating with AALog 3.0 were fixed.
An option "Setup / Interface / MOX & Paddle / Paddle with Dash/Dot memory" was made.
So paddle can be used in three modes now:
- Ordinary mode;
- Iambic mode with Dash/Dot memory;

- Iambic mode without Dash/Dot memory.
V1.77
Paddle can be connected to COM-port (and USB/COM converter) now.
V1.75
CwType can work together with AALog 3.0 now.
V1.70
CwType can cooperate with another software as COM-server
(ActiveX object) now.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.

it.

I'd suggest you to switch "Auto Threshold" button pressed and
check on "Setup/Interface/Enable manual auto-threshold limit". Then you can
manually set this limit some above noise level in spectrogram window.

Another useful settings are to press "Sp.Lock" button and set
speed limits at left of this button to reasonable values.
It helps to avoid auto-speed calculate errors by noise.
Take to attention, that LPM speed = 5*WPM speed.

Ok - I am now getting some of the CW signal decoded but still have a few questions and often still get a lot of eeee's and tttt's.

In the previous Digest 1712:

Sergei said--
I'd suggest you to switch "Auto Threshold" button pressed and
check on "Setup/Interface/ Enable manual auto-threshold limit". Then you can manually set this limit some above noise level in spectrogram window.

-- OK, I did both of these steps but not sure I understand the two Red Lines I am dealing with in the in the oscillogram bottom window. Should the top red line be at the top of the noise displayed. Second, I am not sure exactly what the bottom red line is? Do I move it to top of what appears to be the signal level? Are the two red lines tied together some how or if in manual, can they be adjusted independently?

Sergei said:
Another useful settings are to press "Sp.Lock" button and set
speed limits at left of this button to reasonable values.

-- OK, did that but what is a reasonable value?

Sergei said-
It helps to avoid auto-speed calculate errors by noise.
Take to attention, that LPM speed = 5*WPM speed.

-- what does LPM mean?

-- When I start the Program, I go in and check that I have selected my signalink sound-card interface each time., but what about the " Go to Max or Auto go to Max", what should I do with that option? Is that different than the Auto Threshold?

CW is not error-free mode. In any case CwGet can _help_ to human operator,
but it can't _replace_ him ...

LPM = Letters pr. minuts

I have bin using CWGET for years now, and it works wonderful, but not better than the way the sign arrive to my receiver.

Some operator use very short distance between sign, other have very long □dahhhhh□□s and short □dih□, some signals is noicefull, and all that could confuse the program, so to do a test, you must find a CW-operator with perfect signs with signal better than 559, then you will see a perfect receive.

I have not found a better program to receive CW, than CWGET.

4946. SeaTTY won't automatically save on Raw Log or Receive Messages

Yahoo group: dxsoft
Date: 2011-01-26 18:31:27 UTC
From: James T.T
Topic: 4946 Message: 4946

I noticed when going to SeaTTY Raw Log or SeaTTY Receive Messages,
it does not automatically save RTTY messages I receive.
I have the latest SeaTTY download. If something is missing in my
computer causing this, is there a way to delete all SeaTTY downloads
and reload the lastist SeaTTY. I still have my reg code when I
purchased SeaTTY.
Any help would be appreciated,
James Tanton

Hello James,

Thursday, January 27, 2011, 12:31:27 AM, you wrote:

JTT> I noticed when going to SeaTTY Raw Log or SeaTTY Receive Messages,
JTT> it does not automatically save RTTY messages I receive.

Show me a sample, please.

Probably "ZCZC" sequence is just lost for noise...

Another problem can be activated filter at Setup/Filters page.

JTT> I have the latest SeaTTY download. If something is missing in my
JTT> computer causing this, is there a way to delete all SeaTTY downloads

Just delete them.

JTT> and reload the lastist SeaTTY. I still have my reg code when I
JTT> purchased SeaTTY.

You can always install new version over old one.

Yahoo group: dxsoft
Date: 2011-01-26 19:35:54 UTC
From: James T.T
Topic: 4946 Message: 4948

Sergei,
I found the problem. The date numbers was confusing and I also
had renames somethings I receive sometime ago. So I right clicked
the mouse, move the cursor to Arrange Icons, then moved the cursor
down to Modify.
Everything was rearranged in order of date received. Everything
is working great.
I have a Hal ST-6 Terminal unit connected to a MITE AN/UGC-41 KSR
teletypewriter. I have both connected. That is the good way on
being sure all of the letters and figures match with SeaTTY. I use
ITTY a lot.
Thanks again,
James Tanton

From: Erik Nielsen
Topic: 4950 Message: 4950

Hi

I have just upgraded my Norton Internet Security to version 2011.
When I started AATest it was removed by NIS due to suspicious behaviour.
I could restore it again, but what kind of activity could be the reason for
this ??
I did not see that with NIS 2009

The AATest was version 1.92 and also version 1.93

Hi Alexander

Thank you for the info. I figured that out by looking through the program folder.
But it was first today I found how to update the score, as I missed some points and a multiplier for LZ.
When I used the Update button it did what I was looking for.

Best regards
/ Erik

Robert

My Bandmaster is running on my HP Notebook Vista machine.
What problem do you have? No display? No communication to the internet?

4974. AALOG 3

Yahoo group: dxsoft
Date: 2011-02-09 04:53:50 UTC
From: ve4wz
Topic: 4974 Message: 4974

Hello Alexander, I have a problem with moving logfile from one computer to another. Both machines are running XP

Computer 1 has AALOG3 up and running.

Computer 2 has Trial version of AAL3 that has expired.

I deleted the trial vers and downloaded a fresh vers that I installed into folder DXSOFT.

When I load the file it still comes up with the trial version telling me that it is expired.

Can I copy license from Comp #1 to Comp#2 with expired trial vers?

How to delete Trail vers from Comp #2?

Hi,

Sorry for being insistent. But I do need to understand if I would run the incoming ARRL DX contest with AATest or I do need to be prepared to switch to N1MM instead to have that environment ready on time.

Would you think you might have a fix in time?

Thanks in advance, Pedro LU7HZ/A

You MUST ONCE run cwtype and cwget as administrator. Right click on
icon and select "As Administrator"

Best regards,

4982. Configuration of AATest for SO2R using OmniRig

Yahoo group: dxsoft
Date: 2011-02-18 03:09:56 UTC
From: lu7hz
Topic: 4982 Message: 4982

Hi,

I'm trying to configure AATest to use the SO2R configuration
I've without much success.

AATest is configured as follows

Config/SO2R Mode (checked)
Config/Use Omnirig for TRX communication (checked)
Config/Autosend setup (with all macros defined for CQ and S&P)

When opening with this configuration CWType is started although the
configuration is empty and it yields an error dialog saying
"COM-Port open error" (or viceversa).

If configuring CWType for

Key/PTT Port type: Omnirig
Key/PTT port number: RIG1

All commands from AATest are correctly sent to RIG1 configured in
Omnirig.

If Key/PTT port number: RIG2

All commands from AATest are correctly sent to RIG2 configured in
Omnirig.

AAtest reports the correct frequency in the left and right radios.

So basically the Omnirig configuration is working Ok when used each equipment separately.

But when entering a contact in the left radio the proper macro is activated in CWType but
not transmited (the setup is NONE as it is bring by AATest); if forced to be RIG1 both
contacts in the left or
right radio dialog are sent to RIG1 and likewise for RIG2.

The macros I'm using are the same than configured for a single radio configuration. i.e.
the CQ test (F1) is
cq `[ss]`[sp120]`[m4]`[sr]TEST

Any hint or comment? sample macros to use on SO2R? configuration samples? comments?

I'm trying to make this change operative by Friday night to participate with the SO2R
configuration in the ARRL International DX for CW.

Thanks in advance, Pedro LU7HZ

l> Key/PTT port number: RIG1

In CW-mode special PTT/KEY interface at separate COM-port for SO2R is used.

At COM-port TxD pin is used to select RIG.

At LPT-port pin 14 is used.

Hardware schematics should use this signal to feed PTT/KEY signals to
selected RIG.

WinKey interface with two pairs PTT/KEY outputs can be used also.

Hi Sergei,

I don't quite understand this behaviour. If I do have Omnirig configured, and AATest is correctly interacting with each the left and right (showing correctly the frequencies of each one) why I would need to have a SEPARATE interface to send the characters to one or the other???

Why not just to send to RIG1 if the focus is on the left radio and RIG2 if it is on the right radio?

The way it operates isn't at all supporting Omnirig as claimed then.....

Regards, Pedro LU7HZ

In really "manipulation via OmniRig" is STRONGLY NON-RECOMMENDED
for using. It is "last-resort" method, can be used while your building
good interface...

l> Why not just to send to RIG1 if the focus is on the left radio and RIG2 if it is on the
right radio?

l> The way it operates isn't at all supporting Omnirig as claimed then.....

Nobody promised that CwType will change manipulation rig during SO2R operation
if "manipulation via OmniRig" is used.

I wrote in help-file:

===
Here is a list of macrosequences to switches transceivers
by additional output of PTT/keying interface in the SO2R mode
("single operator - two radios"):
===

In SO2R hardware this output can be used to switch phones etc. also ...

First, Who and where such recommendation is given? I can not quite find out any reference to it?

Second, in this case it is not a "last resort" method of any kind since it doesn't work with CWType either as first nor last resort method, it doesn't work, period.

Third, what a good interface is? The simpler? The most expensive? The one that work for the purpose? The one you like?

Well I thought you claimed to implement a reasonable SO2R interface and this is not the case, at all.

I don't need this signal to switch anything, I just have a mixer that sends left radio to left ear and right radio to right ear and this is all you need to SO2R not just an additional interface.

Yet another topic where this package fell behind others.

l> First, Who and where such recommendation is given? I can not quite find out any
reference to it?

It is MY recommendation.
Manipulation quality depends on uncontrolled data transfer delays between CwType and
OmniRig if
this method is used.

More over I wonder why this method works at all :)

So I implemented this feature by user requests, but I don't recommend to use it and
don't consider any reports of problem with this method.

Best way to avoid such problems - don't use this method.

Second, If you can build SO2R station, you can build CW interface at separate
COM-port (at least at USB/COM converter) or LPT-port.

Well, I didn't saw such recommendation from you anywhere before this post. So it was a secret till now.

>
> So I implemented this feature by user requests, but I don't recommend to use it and
> don't consider any reports of problem with this method.

I'm not reporting a problem, but a missing function. Which is inconsistent with the documentation and program.

You support a method of interface (OmniRig) which doesn't function with all the features of your program (SO2R) and you don't say it clearly anywhere when you should. It's somewhat inmaterial whether you like it or not, if you implement something implement it right or don't implement it at all.

Moreover, you implement a program (AATest) which is claimed to work integrated with other (CWType) and you didn't follow your own defined architecture. Because if you follow your own architecture I should be able to trigger a second copy of CWType, define a different channel to communicate with AATest and have AATest control both instances.

But the integration isn't there, AATest can not define the channel to communicate with an instance of CWType, much less with two.

> Best way to avoid such problems - don't use this method.

With your recommendation I would need FOUR (4, 1-2-3-4!) COM ports to implement a SO2R with CAT.

Two to handle the CAT thru OmniRig to each transceiver, one to handle the keying outside of OmniRig and ANOTHER to control the switch between Rig1 and Rig2.

Are you sure you want to recommend such horribly complex and inefficient scheme?

l> keying outside of OmniRig and ANOTHER to control the switch between Rig1 and Rig2.

No!
One port for CAT1, second port for CAT2 and third port for CW and for rig switching
(CTS pin for PTT, DTR pin for KEY and TxD pin for rig selecting).

l> Are you sure you want to recommend such horribly complex and inefficient scheme?

I am sure that mixing CAT and CW in single port is really complex and inefficient scheme.

Well Pedro,

I disagree - I think the implementation is quite OK. maybe it fell behind your expectations.

Everyone has a different interpretation of SO2R - so maybe yours is different.

Yes, maybe.

My expectations are set when the documentation refer to both the usage of OmniRig and SO2R without explicitly saying one doesn't work with the other.

If the authors have the opinion that keying thru Omnirig is the "last resort" but implemented it because the users asked for that but without support for problems.... why in heaven not to do it in full including SO2R and CONTINUE not to support any problem....

Thank you for the answer,

> One port for CAT1, second port for CAT2 and third port for CW and for rig switching
> (CTS pin for PTT, DTR pin for KEY and TxD pin for rig selecting).

Other than to interface the TxD pin signal with an inverter relay thru a transistor (just like the KEY interface but moving a relay) is it something else needed?

How the port should be configured? The TxD line is always activated or needs to be activated somehow? Should it be configured just like a regular COM port?

Does the program assumes any handshake to operate in SO2R?

Any need to change the macros or AATest knows to which radio to send based on the window where the data is entered?

-12V at TxD pin means "Rig1",
+12V means "Rig2"

Use these signal to switch signals from RTS and DTR to selected rig.

l> How the port should be configured? The TxD line is always activated or
l> needs to be activated somehow? Should it be configured just like a regular COM port?

You don't need to do additional configuration.
Just select Key/PTT port as "Com-port via Windows API",
select port number in "Key/PTT port number".
"Key/ptt port pins" leave by default.

l> Does the program assumes any handshake to operate in SO2R?

No, TxD pin is just used as logical output (BREAK signal is used to switch it).

Ok. Modern USB based COM ports doesn't provide +12/-12V anymore, it's more like something below -3V or above +3V. But Ok with the polarity.

> http://www.dxsoft.com/image/2RadioCom.gif
> For information only!

Yes, I guess I understand how it works :-)

I've used a different design with a mechanical inverter relay, but the operation principle is the same.

Hi,

Testing the SO2R mode with AATest it seems there is an erratic use of the aF12 macro contents prefixing the contents what is informed
as the macro of "Ask Exch Macros" for example.

I'd fixed it by erasing the content of the a-F12 but it doesn't help it to be the beacon, which is in turn the workaround of the autosend during S&P bug.

Is this a known behaviour?

5002. Re: Configuration of AATest for SO2R using OmniRig

Yahoo group: dxsoft
Date: 2011-02-20 23:13:36 UTC
From: lu7hz
Topic: 4982 Message: 5002

I've configured autosend in AATest with the following macros

CQ F1, Answer F2, Ask call macros F5, confirm F3, dupe F6, ask exch F12

Call F1, Answer F2, Dupe F6

S&P Call F4 send Exch F11

While in left windows in S&P I type any callsign and press enter it
should execute F4 which

says LU7HZ, it says instead XXXXXXXXXXXXXXXXXXXXLU7HZ where the Xs are
what aF12 contains. It happens ONLY the first time, when performed again
works ok sending only LU7HZ.

Now if I come to the right window (it can be in either CQ or S&P) and
type a callsign and hit enter again it sends XXXXXXXXXXXXXX(Callsign)
where Xs is the content of aF11 or aF12. It happens only the first time.

The pattern self repeat when you go back and use the left window (the
first time).

Is it more clear now?

5004. AATest data base corruption

Yahoo group: dxsoft
Date: 2011-02-22 00:46:32 UTC
From: lu7hz
Topic: 5004 Message: 5004

Hi,

Today while generating the initial reports for the ARRL DX CW the SUM file creation produces a trap that makes AATest to go down, the ALL and Cabrillo reports are created but with a block of about 100 QSO being replaced by garbage.

Is this situation continues my entire operation for the contest is going to go down the tubes.

The program did block and ended with an exception during the contest, but I didn't review the data before continuing.

Is there any known method to recover from a corrupted data base? An interim backup of some sort? Or a mechanism to repair it?

Can I provide any file to help diagnose the problem?

5006. Bug in AATest (Macro Corruption)

Yahoo group: dxsoft
Date: 2011-02-22 01:30:34 UTC
From: lu7hz
Topic: 5006 Message: 5006

The following process helps into the problem.

Download a fresh copy of AATest and CWType, install both.
Bring AATest an perform the minimum configuration needed for it to run.

In autosend configure in sequence F1..F12 for the different possibilities.

Configure at CWType each macro F1 thru F12 with a text "macroFx" where x is the number of the macro, left the other macros defined as they are from the installation (macronn).

Configure a contest (ARRL DX Int CW in my case).
Enable SO2R mode.

Type any license in the left radio (ej. W2XXX <ENTER>) in CWType you will see macroF2 (ok).
Then type the exchange (ej. NY) in Cwtype you will see macroF4 (ok).

Then move the cursor to the right radio and type a license there and press enter, CWType shows macro35macroF4. macroF4 would have been the right answer, macro35 is garbage added as prefix.

Continue typing contacts in right window.all of them perfect

Now switch to the left radio and type a callsign (ej K1TTT) upon ENTER the CWTYPE window will say macro35macroF2, all the remaining contacts on the same window will be ok.

"macro35" is the one configured in aF11 as fresh out of the download.

The workaround would have been to remove the content of aF11 for an empty space to be added instead.

Hope it helps. 73 de Pedro LU7HZ

Hi,

Further confirmation, the corrupted data is at the .aat data base and it's backups as well.

So unless there is a way to recover from it I'd lost 1/4 of my contacts for the ARRL Intl DX contest.

I'm not concerned about my scoring since in this category with 400 QSO won't be high, but I'll deny my point to all of these fellows
that contacted me.

I'm now concerned by the fragility and lack of warning that part of the data base is getting corrupted (checksum, integrity, additional backup, etc) on this program.

Any comment or insight?

From: Alexander Anipkin
Topic: 5006 Message: 5009

Hello lu7hz,

Tuesday, February 22, 2011 , you wrote to me:

OK. I see now. I thinked I include full description of the SO2R in
documentation. But I do not see it. Will add.

Abt Alt+F11 - you MUST set macro `[ab] in Alt+f11. AAtest use it to
say to cwtype clear send buffer before switch to another radio.

l> The following process helps into the problem.

l> Download a fresh copy of AATest and CWType, install both.
l> Bring AATest an perform the minimum configuration needed for it to run.

l> In autosend configure in sequence F1..F12 for the different possibilities.

l> Configure at CWType each macro F1 thru F12 with a text
l> "macroFx" where x is the number of the macro, left the other macros
l> defined as they are from the installation (macronn).

l> Configure a contest (ARRL DX Int CW in my case).
l> Enable SO2R mode.

l> Type any license in the left radio (ej. W2XXX <ENTER>) in
l> CWType you will see macroF2 (ok). Then type the exchange (ej. NY)
l> in Cwtype you will see macroF4 (ok).

l> Then move the cursor to the right radio and type a license
l> there and press enter, CWType shows macro35macroF4. macroF4 would
l> have been the right answer, macro35 is garbage added as prefix.

l> Continue typing contacts in right window.all of them perfect

l> Now switch to the left radio and type a callsign (ej K1TTT)
l> upon ENTER the CWTYPE window will say macro35macroF2, all the
l> remaining contacts on the same window will be ok.

l> "macro35" is the one configured in aF11 as fresh out of the download.

l> The workaround would have been to remove the content of aF11
l> for an empty space to be added instead.

l> Hope it helps. 73 de Pedro LU7HZ

Best regards,
Alexander mailto:aia@...

5010. AALOG 3.03.1143

Yahoo group: dxsoft
Date: 2011-02-25 05:59:40 UTC
From: blstrmstr2003
Topic: 5010 Message: 5010

I recently changed my callsign and noticed that when I log a new qso it puts the time in as local time. I checked the log under my old call and all the times are UTC. Is there a setting somewhere that I can change, so when I log a new QSO it puts in UTC instead of local?

Do you create another log?

Please check your log settings (config|Logs list). It MUST has checked "Use system time" checkbox or have proper manual settings of time difference.

Best regards,
Alexander mailto:aia@...

Hi Bob

Great news.

Yes, I am anxiously waiting for his Bandmap to see what it really does compared to Bandmaster.

I hope it is identical, other wise if Bandmaster is better, I will continue to use Bandmaster.
If it is equal, then I will have some suggestions for improvements.

From: Dan Schaaf
Topic: 4969 Message: 5019

Dear Alexander

My strong suggestion:
Please also include filtering for call sign or several callsigns.
During DXPeditions, I do not care to see cluster spots for countries that I
do not care about. I only wish to see a specific callsign or maybe 2 or 3
important call signs.
Example:
VP8ORK and Cameroon and Sao Tome all on the air at the same time, the
cluster list gets too long.

Also, make filter such that user can choose bands and modes for each call
sign such as:

VP8ORK
Band CW SSB RTTY
20 X X
15 X X X
40 X X

Where X is the band mode needed.

20m
Dan Schaaf

From: ROBERT PURVES
Topic: 5016 Message: 5020

I am the same and that is exactly my complaint. I bought Bandmaster and it wont work because I upgraded my PC to Vista. I was told it was not compatible with Vista and never replied when I asked if there were plans to upgrade it

Subject: R: RE: [dxsoft] Bandmap

If I can add my 5 cent OT to the gruop,

is a pity that VE3NEA has quit from development and compatibility of its software that face serious problems running under Win7.

I bought the license of the the different software provided but since I changed my OS I can not even use one.

Good DXing

Hi Dan

Bandmaster is certainly very good and I hope the new one is as good but I was disappointed when I got no support from VE3NEA after having paid for the Bandmaster licence.

Hi Bob

Great news.

Yes, I am anxiously waiting for his Bandmap to see what it really does compared to Bandmaster.

I hope it is identical, other wise if Bandmaster is better, I will continue to use Bandmaster.
If it is equal, then I will have some suggestions for improvements.

Bob

Is your Bandmaster running stand-alone or connected to another software such as AALog or Ham Radio Deluxe?

Hi Dan. It just will not run at all. I get a message saying that bandmaster.exe has stopped working. It works ok on XP machine and when I e mailed the software author was told Vista was not supported. I asked Alexander and he told me a new version of AAlog was coming out with a bandmap

5021. True TTY Question: Is It What I Want ?

Yahoo group: dxsoft
Date: 2011-03-01 12:10:49 UTC
From: Dave
Topic: 5021 Message: 5021

Hello,

Would like to monitor NAVTEX, and also be able to generate
the C.G. transmitted Weather FAX charts.

Have never really played with the digital modes.
Have an Excalibur receiver, good to 50 MHz, and am running W7.

I would like to learn how to use only one program,
hopefully free, or inexpensive.

"Simple" to use, relatively, is a key requirement, what with my limited IQ level.

Is True TTY possibly what I want ?

If so, what's the latest version; there seem to be so many that come up with a search ?

Other suggestions ?

Thanks,
Bob

[...]

D> Is True TTY possibly what I want ?

SeaTTY is more appropriate for you.
Download and try it...

Hi Dan

Bandmaster is certainly very good and I hope the new one is as good but I was disappointed when I got no support from VE3NEA after having paid for the Bandmaster licence.

Hi Bob

Great news.

Yes, I am anxiously waiting for his Bandmap to see what it really does compared to Bandmaster.

I hope it is identical, other wise if Bandmaster is better, I will continue to use Bandmaster.
If it is equal, then I will have some suggestions for improvements.

Dan

Decided to take the easy route and have rebuilt old XP PC, now working well. Exchanged e mails with Alexander last October and he said he had a new version of AAlog working with a bandmap and it would be released soon. I look forward to it but at least I have a working system now

Cheers

Bob GM4IKT

Is your Bandmaster running stand-alone or connected to another software such as AALog or Ham Radio Deluxe?

here is link for everybody

www.dxsoft.com/download/aalogb.zip

This is ONLY exe-file. It's name aalogb.exe (you need create new
shortcut manually) and it must be in the folder with aalog.exe

Please note. Telnet window is the first and Band map + Spot list is another window.
In Telnet window properties you can select checkbox "Connect to cluster
when AALog start" (no telnet window open).
Right click on Band Map you can select special mode when Band Map always will show current freq in
the center of the window.

Best regards,
Alexander mailto:aia@...

Hi Alex

For the present time, can you fix AAlog3 v1143 ???
It does not send 60 meter log data to Bandmaster.
So, always Bandmaster does not show the correct color for worked/confirmed
etc for 60 meters.

Alexander

I have tried to get this to work but I think have made mistake. I have ended up with extra files in my AAlog folder and nothing in new shortcut which I created. How do I recover from this? AAlog still works but is no different from normal AAlog. It is my fault I am too old for computers I think!

5028. AATest bugs

Yahoo group: dxsoft
Date: 2011-03-05 12:55:15 UTC
From: lu7hz
Topic: 5028 Message: 5028

Hi,

Found the following AATest bugs.

1) When you want to insert a new record neither Ins nor right click and Append record works.

2) When manually entered using the NEW QSO window and manually corrected the date and time of all the records added (because are inserted with the date/time of the insertion without allowing a back date to be entered) the Cabrillo file shows the date as zeros.

3) When you entered during a contest a wrong State (in ARRL DX CW contest) it's took as multiplier even if it is bogus (i.e. "IA"). Furthermore when you correct it back to normal it's still counted as
a multiplier ruining the score and the ALL report.

Thank you, it's not documented anywhere.

When clicked "Update" a message box appears saying "Backup Context QSO exists.....", how that backup file can be restored in case of need?

Very little assistance from the program on spotting which multiplicators are potentially considered as wrong, have to tick one by one.

Regarding the other bugs the field left in zero wasn't the time but the frequency, and it seems there is no way to enter it by editing the records; so the only way it to manually edit the Cabrillo file once generated (everytime is generated).

5031. Same interface for CW-Type and WSJT

Yahoo group: dxsoft
Date: 2011-03-05 19:25:56 UTC
From: Gabriel - EA6VQ
Topic: 5028 Message: 5031

Hello,

It seems that WSJT uses both the RTS and the DTR lines of the RS-232 for PTT. This is causing me trouble as I also want to use the same interface (Rigblaster plus) with CW-Type, which uses RTS for PTT and DTR for keying the rig in CW.

The result is that when I transmit with WSJT I also hear the CW monitor tone, what is very annoying.

Anyone has had a similar problem? I would like to find a solution other than disconnecting the CW-key cable every time I want to use WSJT...

Please find AAlog.exe file on your hard drive. You can use windows
search. By default it located in folder AALog. Then put aalogb.exe
(not shortcut but file) near this file.

Best regards,
Alexander mailto:aia@...

backup.dat file in aatest folder contain log data before running
Rescan. You can just rename it and use as aatest data file.

Hightlight them in red? Place an "X" nearby? Popup a dialog with the error offering to correct? You know when a multiplier is wrong since you're not counting it, you've several ways at your disposal to highlight the fact. Pick one.

> Use Config - Post-contest mode menu to enter old contacts

"Can not focus a disabled or invisible window" error message", also
"Wrong date and time format" when I try to add a new record.

When editing a record the frequency is still shown as zero with no chance to edit it (other than manually with a text editor in the Cabrillo output).

NEED HELP!!! my IC735 gives me trouble when I TX to send, the rig blaster is keying the rig BUT nothing is coming out. I have used it on my YAESU FT-840 and works fine on it, but using the IC-735 on my CW and digital. can anyone help 73 W4QND/Dale

5041. CwGet 2.25 is released

Yahoo group: dxsoft
Date: 2011-03-10 13:59:17 UTC
From: Sergei Podstrigailo
Topic: 5041 Message: 5041

Hello All,

I just have uploaded CwGet 2.25 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

--
Best regards,
Sergei

==========
==

CwGet Versions History

V2.25
The Ctrl-U hotkey switches "Tuning Rig by" state between
"NONE" and last selected tuning method ("Main VFO" or "RIT").
The "Setup/Interface/Input soundcard channel" option (Mono/Left/Right) can be used
to select one of two sound sources connected to a single soundcard.
The command line argument "/c Filename" can be used to open capture
file at the program startup.
V2.20
The "Setup/Text/Swedish charset" option was added.
V2.10
When the "Sp.lock" button is pressed, minimal and maximal speed (in LPM) are defined
by regulators at left hand side of this button.
Click to this button with "Ctrl" key pressed moves center value of speed limit to
a current speed.
The "Setup/Multi-decoder/Use speed limits from main decoder" option defines
if these speed limits are used in multi-decoder window also.
The "Setup/View/Always on top" option is used in place of "OnTop" button now.
V2.0
AALog 3.0 support was made.
An option "Use mouse wheel for tuning" was made.
V1.90
Most settings are being selected in the separate window now,
which is opened by the "Setup" menu.
"Main Filter", "Burst Filter" and "Sound Output" sub-menus are opened by the "Filters"
menu.
The "Multi-Channel decoder" command is moved into the "File" menu.
"Save Buffer" hotkey is Ctrl-S now.

Ctrl-F hotkey switches "Sound Output" state between "Sound Without Filtering"
and last selected filter (or "Sound Off" state, if it was selected last).
Multichannel-decoder font and background is defined separately from main

RX Window settings.

Auto-threshold process in the main and multi-channel decoder works better now.
Auto-threshold low limit can be defined manually if the
"Setup/Interface/Enable manual auto-threshold limit" option is selected.
This limit is used not as minimal value now, but as level of input noise.

The "Setup/Multi-decoder/Use manual auto-threshold limit from main decoder" option
enables using of user-defined limit in the multi-channel decoder.

5042. Feature request for SeaTTY / TrueTTY

Yahoo group: dxsoft
Date: 2011-03-12 12:38:37 UTC
From: Kjartan Andersen
Topic: 5042 Message: 5042

Would it be possible to add a feature for setting custom shift?
When I copy HF-FAX the 800 shift is a bit to small to catch both
peaks. I would like a feature where i could set a custom shift so that
both peaks are covered perfectly.

Is this possible?

Its not that it is very much wider. I would guess about 830-860.
I was listening to the Hamburg DDK3 frequency.
Window frequency (7878.1) kHz. When I receive this the Mark misses the
peak by 5-10% if Space is ecactly on its peak. I still receive a
picture, but I imagine it would be even better if the Mark/Space hits
exactly on the peaks.

> to select one of two sound sources connected to a single soundcard.

I found that Mono and Left works ok but I'm having difficulties on making Right work; does it requires any special configuration?

Also, when entering thru the Left channel the output is placed on both (left and right); is it possible than when selecting Left input the output is sent to the Left output and Right input to the Right output?

I feed the same signal thru both the left and right channels, when set to take signal from the left the program works with set to take it from the right it doesn't.

>
> l> does it requires any special configuration?

Do you click "OK" or "Apply" ?

I found that some problem with redrawing occurs if I click "Apply"...

And which soundcard and input do you use?

Yes, as I said the basics has been covered :-)

> And which soundcard and input do you use?

The soundcard is a Realtek AC87 which uses a generic chipset. I do use the Line-In input.

In my use the only benefit of such configuration is to be able to run more than one copy of CWGet, feed from different sources on a single soundcard.

The most immediate use I can think of is on a SO2R configuration.

But if each copy of CWGet feed to both channels the end result is garbage.

And what occurs when Right channel is selected?
Is signal fully absent?

I can't reproduce this behavior at my hardware.
Will wait more reports...

[...]

Do you really use CwGet as sound filter?

Probably will implement stereo output later...

The signal as present in the input isn't shown nor heard in the outputs, there are some parasites and stray sounds. Would try over the next weekend to summarize and send samples and double check everything.

> Do you really use CwGet as sound filter?

Yes, I do actually copy the code by ear but found convenient to tune thru the waterfal and the different filters available at CWGet. I do like it more than other DSP/Filter software.

> Probably will implement stereo output later...

Looking forward to. The main problem of using two soundcards is the equalization of both in order not to be confusing when one ear receives one output and the other another.

As wrote in the help-file:

Here is a list of macrosequences to switches transceivers by additional output of PTT/keying interface in the SO2R mode ("single operator - two radios"):

`[rg1] - to select first radio;

`[rg2] - to select second radio;

`[rgs] - to save used radio to memory;

`[rgr] - to restore used radio from memory.

You can use pins 16,17 + 1 in N6TR-mode.

l> Is there a way to select the radio when using the LPT port for PTT/Keying?

Yes, pin 14 is used for SO2R signal.
High level means "Rig1", low level means "Rig2".

Pedro

Alexander sent this out a while ago. I was unable to get it
to work though.

here is link for everybody

www.dxsoft.com/download/aalogb.zip

This is ONLY exe-file. It's name aalogb.exe (you need create new shortcut
manually) and it must be in the folder with aalog.exe

Please note. Telnet window is the first and Band map + Spot list is another
window.

In Telnet window properties you can select checkbox "Connect to cluster when
AALog start" (no telnet window open).

Right click on Band Map you can select special mode when Band Map always
will show current freq in the center of the window.

5064. elderly parent with hearing and vision disability

Yahoo group: dxsoft
Date: 2011-04-14 04:01:27 UTC
From: Kathleen Nolan
Topic: 5064 Message: 5064

I am the care giver of my mom who is 88 yrs old. I live about 12 miles from her and it is difficult for her to hear me on the phone. However, now another issue we are having is the fact that her vision is also impaired, so to be able to see the screen on the telephone is impossible.

She has a bit of comprehension problems but not too bad - mostly it is because she cannot understand the words clearly she pieces what she thinks she hears and usually gets it wrong. She can play solitaire on a computer and will learn new instructions on her computer (I recently bought her a new Windows 7 laptop)

I know there must be a program out there that can help me communicate with my mother via the computer. I would like to try Skype or any other software where she could speak via a phone and read what I am typing to her, such as a VCO system. I know she will never be able to type her message to me as that would be beyond her skill set - I need help.

It is very upsetting, frustrating and sometimes agravating to get my message across to her, she cannot understand what I am saying on the phone, especially if I am calling from my cell phone to her. It is not fair that I get agravated over the communication and I find that I have to get in my car (and with gas prices this getting harder for me to do) and ride over there just to give her a message or to check in on her. Sometimes I leave the message on her answering machine so she can play it over and over again.

She is not yet ready to live with me and I want to allow her to keep her independence as much as possible.

Please help

Kathleen Nolan

I don't think she would be able to see the small screen on the cell phone, that is the problem, she has both hearing and vision disability

hi kathleen.
have you tried "Windows Messenger" this has video and audio same as skype which is also easy to install and both are free, everything is on the screen,as you have purchased a new laptop i assume it has a webcam built in,otherwise a usb webcam.
i would also recommend you install a anti virus package for peace of mind.
using a broadband connection which can be left on,but has a mute for both audio and sound so your mother can have her privacy.
i hope this may help.

Doesn't look like a spam.

It looks more like the wrong place to discuss this subject.

Perhaps it's just some experiment of sorts :-)

If it can be addressed with a couple of hints might even be a good cause for an OT, at present doesn't seems to lead anywhere and I'm sure she would get better advice at other more specialized forums.

In any case I'll not be following up the thread any further.

My hearing aids are Blue Tooth, this means I can use them to talk on my cell phone. This is awesome!

Dear Mrs. Nolan,

You can send e-mail in large type, this is 18 point type.
This is 14 point type which I use for e-mails to friends.

E-mail is part of windows and it is usually "enhanced" with ads if you use an Internet service provider.

Sincerely,

Robin Alexander, NX6Z.

From: Alain
Topic: 5078 Message: 5078

Hi,I'm trying to log "DX0JP" station as Spradly Island in AAlog .My log places it as being the Philippines.When I chance the Territory manually into Spratly Isl. it goes back to the Philippines when I want to save it.

Cane someone help,

Thanks for reading,

Alain,on4bav

5079. Call clipping with CwType/Winkey

Yahoo group: dxsoft
Date: 2011-04-29 05:26:19 UTC
From: Gary AL9A
Topic: 5079 Message: 5079

I've been bothered for a long time by a problem sending my call from a macro key. I have a key programmed as ~[tx]AL9A which sends just my call. The problem is that the leading dit from the first A is frequently clipped so it either missing or severely shortened and the call goes out as TL9A. I've tried various things such as ~[tx] AL9A and ~[tx]_AL9A to no avail. I've also tried adjusting the Weighting ms: on the MOX & Paddle tab, but do not notice any difference here either. My radio is an Icom 7600 and the keyer is a microHAM MK II with a WinKey chip on board.

If I send my call direct from the MK II it sends correctly. Is there any way to prevent the leading dot in my call from being clipped by CwType?

73,
Gary AL9A

Increase value of "Setup/MOX & Paddle / Tx On at paddle press with keying delay, ms:".

This value is used as Keying after PTT delay in WinKey mode.

Hi Sergi,

Thanks for the suggestion. I've been trying different values and what seems to work the best for me is to have "Tx On at paddle press with keying delay, ms" set at 2000 and "Weighting, ms:" set at 10. On the first send of my call I will sometimes get TL9A or EL9A, but then all subsequent sends work correctly as AL9A. Still not perfect, but much improved. Thanks for the help.

73,
Gary AL9A

If you are using AALog 3.0, then the log file name is AALOG.GDB
This file name is located in the AALog3 Folder in Program Files.
So, C:/Program Files/AALog3/AALOG.GDB

Thanks. I found it in the \AppData\Local\VirtualStore\Program Files (x86)\AALog3 path. I'm still not sure what happened. Basically, a new AALOG.GDB was written over the old one in the aalog3 subdirectory.

It is a problem of Vista/Windows 7 "file virtualization".

Way to avoid is to install AALog NOT into subfolder or "Program Files".

Install it to C:\AAlog , for example...

Dear Sergei

Thank you.
Please tell me, how can I make AALog 3 send the proper log data to Bandmaster for 60 meters. In a previous version of AALog 3 it used to work OK.I am finding that the log data does not change the color of a callsign from worked , confirmed country or even the call sign, so the call sign in Bandmaster always shows as RED color.

Okay. We might be getting a bit off topic here, but what is "file virtualization?"

It is a problem of Vista/Windows 7 "file virtualization".

Way to avoid is to install AALog NOT into subfolder or "Program Files".

Install it to C:\AAlog , for example...

Good question. Never heard of it before.
It will probably get worse with Windows 8.

It that you see.
Windows forward file operation in "Program files" to special folder,
different for different users. More over, it do it not always.
So sometimes you can get original file, sometimes - virtualized one.

5091. Re: [dxsoft] Lost Log File

Yahoo group: dxsoft
Date: 2011-05-05 01:49:13 UTC
From: Gary AL9A
Topic: 5082 Message: 5091

Microsoft introduced the concept of "file virtualization" with the introduction of Vista and have continued the concept in Win7. Basically MS decided that software programs installed in Program Files should not be allowed to create new files or update existing ones in the software's program folder. I believe it was done as a means to deter hackers, worms and viruses from doing mischief in the program's file folder.

This led to the creation of the "Virtual Store", a folder path created by Vista and Win7 that stores new or updated files in a location outside the normal program folder. Of course, the OS doesn't tell you it's doing this at the time it does it, which leads to heartburn when the user is surprised to discover the file that was suppose to be updated did not get updated. It actually did get updated, it's just that the file now exists in a different location and MS doesn't make it easy for you to find it. In my case, on a Vista machine, the Virtual Store path is at C:\Users\AL9A\AppData\Local\VirtualStore\Program Files. There is also a path C:\Users\AL9A\AppData\Local\VirtualStore\Windows where some Windows related updates are now stored.

The difficult thing about finding the Virtual Store path is that the AppData folder in the middle of the path name is a hidden folder. If you don't have your Control Panel set to display hidden files/folders you won't find it in Explorer. You can type the full path name, but only if you know what it is! If you don't want to fool with the Virtual Store you have two choices; don't install your programs in the Program Files location or turn off User Account Control (UAC).

73,
Gary AL9A

Gary,

Thanks for the update. Fortunately, I always set Windoze to show hidden folders, so it's not a problem for me to fiddle around in that area. I wouldn't mind if Windoze would tell us that it moved the data file and even if it were smart enough to realize, "Oh, he's looking for the filename.xyz file which I moved to the Virtual Store path." I guess that the only other alternative is to have software writers put their data files into a \documents\filename subdirectory. I really don't care where the data file resides; I just want the program to be able to find it.

I guess in the end, M'soft is following in the "protect us from ourselves" parade. <Sigh>

5093. AALog doesn't recognize CWType

Yahoo group: dxsoft
Date: 2011-05-08 21:57:39 UTC
From: lu7hz
Topic: 5093 Message: 5093

Hi,

I'm trying to upgrade my station into Windows 7 and re-installed
AALog and configured it to be functional.
Then when I try to configure CWType (which is installed already) as the CW keyer it's not recognized as present (it's offered to Get It).

Just to follow suit I'd got it (latest version) and installed CWType afresh; but AALog continues offering to Get It as if the installation weren't recognized.

I can run CWType and it works ok but it doesn't interact with AALog.

Any clue?

Run CwType "As administrator" (By right mouse button) at once to
let it to write data about COM-server to registry.

5096. CWGet Window Position

Yahoo group: dxsoft
Date: 2011-05-23 02:18:10 UTC
From: lu7hz
Topic: 5096 Message: 5096

Hi,

I'd the misfortune that one of the CWGet instances I use got into an extended desk I don't usually have.

I've two monitors using an extended desk configuration; the extended desk is at my left while the main is right in front.

When I started one particular instance of CWGet it "dissapear" from both the main and extended desk space. I've to go and change the video properties to place the extended desk to the RIGHT of the main desk.

When I do that the lost window of CWGet appears, so I can drag it to the main desk (and then reverse the extended desktop back to the left).

It's kind of cumbersome because I do need to do this everytime I start; it's curious because it happens with a particular instance only (others works Ok) and it's odd because when I switch from left to right the extended desktop all other programs stays there and adapt automatically except CWGet.

Each instance of CWGet I have starts with it's own configuration file with it's own configuration of soundcards and defaults working with different rigs.

Other than the odd positioning the instance works fine.

I guess there has to be a parameter on the INI file to fix this, right?

Can you help?

TU de Pedro LU7HZ

Pedro

I use 2 screens also.

I use the following settings and you can copy/paste these into your INI file. After you see the new position of the screen, just move the window to the correct position and then click Settings/Save

```
[Screen]
Left=616
Top=39
Height=370
Width=505
FHeight=50
RHeight=150
FFTBackground=16777215
CurrSpectrumColor=16711680
PeakSpectrumColor=32768
RxMarkColor=255
TxMarkColor=0
OscBackground=16777215
SignalColor=32768
ThresholdColor=255
```

When I do that the lost window of CWGet appears, so I can drag it to the main desk (and then reverse the extended desktop back to the left).

It's kind of cumbersome because I do need to do this everytime I start; it's curious because it happens with a particular instance only (others works Ok) and it's odd because when I switch from left to right the extended desktop all other programs stays there and adapt automatically except CWGet.

Each instance of CWGet I have starts with it's own configuration file with it's own configuration of soundcards and defaults working with different rigs.

Other than the odd positioning the instance works fine.

I guess there has to be a parameter on the INI file to fix this, right?

Can you help?

TU de Pedro LU7HZ

Hi Dan, TU.

I'll try it later at home. The Settings/Save part I did (many times) and it doesn't seems to work, when I start the program it come back with the main window in the wrong place.

Will let you know the result.

Hi,

It may be that this message is a duplicate of one that I think
I sent a couple of hours ago, but it is possible that that one did
not get sent !

The latest version of WINE is extremely good and I am running
it in UBUNTU 10:10 very effectively.

Even a complex program like YaND is perfectly happy to work
in this setup.

I have not yet found a Windows program that WINE refuses !

Cheers

Bob

5103. Old .ini doesn't work

Yahoo group: dxsoft

From: Paul
Topic: 5103 Message: 5103

I've moved CWGet to my new computer and copied over the .ini file. But it doesn't register. I went to the DXSoft web site to post a email and was asked to set up an account to log in. But it wouldn't take my input though it all looked to be in the right format.

Is an newer .ini needed for the latest CWGet?

I also registered TrueTTY and I believe AAlog. Will I have the same problem with them?

Probably you copy ini-file NOT to working directory of sowtware.

P> I went to the DXSoft web site to post a email and was
P> asked to set up an account to log in. But it wouldn't take my input though
P> it all looked to be in the right format.

P> Is an newer .ini needed for the latest CWGet?

Just copy/paste your reg-code into registration window again.

If you lost a message with a code, use old ini-file
(just copy/paste all text from it).

P> I also registered TrueTTY and I believe AAlog. Will I have the same problem with them?

If you don't make backup copy of received e-mail's and another
data, you will have problems forever ...

Better way is to read help-file completely at first.

Short answer - you need do nothing, CwGet and Cwtype do it
"out of the box".

Sergei,
I did read both but I must have missed that section. It was also mentioning communicating with AALog and it got a little confusing for me. I'm guessing it puts the call in the Other field and not the "Call" field.

I did keep a copy of the .ini as backup and I copied it to the CWType folder were the application is in C-Program files (x86)- CWGet.

What path, working folder, should it be in?

I was going to copy from there an past into the reg box but the .ini shows
Datastr1=.....
Datastr2=.....
Lines=7
ksum=......

And I was concerned that I had to remove the Datastr(n)= part and take everything down to Datastr7 and leave off Lines=7 and following.

Thank you and 73,
Paul

PS: This time I'll save it in NotePad instead of just making a copy of the .ini

P> mentioning communicating with AALog and it got a little confusing for me.
P> I'm guessing it puts the call in the Other field and not the "Call" field.

Communication CwGet with CwType works by default in the same way:

==
The program can transfer received data to AALog HAM logger....
To transfer data from RX-window, double-click on word or select words by mouse.
Then select the field from popup-menu. CwGet removes all spaces in text
transferred to a logger.

When the "Setup->Text->Catch word by one mouse click" option is enabled, you can catch
a word from RX-window by a single mouse click, not double-click but you still can select
part of the text by mouse dragging.
===

P> I did keep a copy of the .ini as backup and I copied it to the CWType
P> folder were the application is in C-Program files (x86)- CWGet.

It is wrong, because it is NOT working directory.
See "Start in" property of CwGet shortcut.

By default it is something like "ProgramData\AllUsers\CwGet".

P> What path, working folder, should it be in?

P> I was going to copy from there an past into the reg box but the .ini shows
P> Datastr1=.....
P> Datastr2=.....
P> Lines=7
P> ksum=......

Yes, copy/paste this section as reg-code.
Or copy/paste whole text .

P> And I was concerned that I had to remove the Datastr(n)= part and take
P> everything down to Datastr7 and leave off Lines=7 and following.

Don't remove strings.
Just copy/paste all file text.

5109. 24 bit card Sampling Rate suggestion

Yahoo group: dxsoft
Date: 2011-05-29 17:20:32 UTC
From: Paul
Topic: 5109 Message: 5109

I'll be using a CreativeLabs SoundBlaster Live 24 bit external box for CWGet. The spec on that says it can deliver up to 96Khz. I see other references of 48Khz. What should I change the CWGet sample rate to - if I should change it at all - to take best advantage of that hardware.

In other words, do I just put it at 96000 and see what happens, then 48000 (or 44100) and compare?

73,
Paul

Topic: 5104 Message: 5110

Sergie,
Thank you. It does help to know where the "working directory" is. I was wondering where the CWType .ini file was and found it there too.

I now understand that transferring data from CWGet to CWType will be a simple as single or double clicking on a word (depending upon SetUp check box) and selecting the field to transfer into from a popup.

I have backups of my other licenses in their .ini and now that I know were they go (ProgramData), I should be all set.

Thank you and 73,
Paul

PS: I especially appreciate that you are keeping your software current with the latests Windows OS and 64 bit computers.

Don't change it at all. CwGet uses soundcard at 11025 samples/sec in any case.

More exactly, you can change it to correct soundcard sampling rate error.
For example, my soundcard has real recording sampling rate 10800 in place
of 11025.

Though this error has not big meaning in CwGet - it does only frequency error at frequency rule.

But in TrueTTY and SeaTTY it is very important to correct sampling rate error for good decoding...

Sergie,
Okay, I won't change that setting. And I understand that Correct is important for PSK and other digital modes. MixW2 includes software for sound card correction. I don't know how it interfaces with appication vs computer system vs selected sound card - I was wondering if running their correction software would also help TrueTTY?

If not, how would I perform sound card correction? For example, if their software reports a sampling rate other than 11025, would I change the sample field to the value actually reported for the sound card?

In other words, if I have some software that reports the real sampling rate and I have digital software, like TrueTTY, that give me a sampling rate field, would I change the to match the reported rate?

No, another software correct itself (it parameters), not soundcard.

P> If not, how would I perform sound card correction? For example, if their
P> software reports a sampling rate other than 11025, would I change the
P> sample field to the value actually reported for the sound card?

Yes, surely, if another software use card at the same sampling rate (11025).

P> In other words, if I have some software that reports the real sampling
P> rate and I have digital software, like TrueTTY, that give me a sampling
P> rate field, would I change the to match the reported rate?

Yes.

The simplest way to do is to run SeaTTY (trial version is enough),
receive a fax and do "slant correction". For this purpose
you ever don't need real FAX transmission, a stable signal with period 1sec/N is enough.
For example, NAVTEX transmission draw good picture in FAX mode.

Another way is to use stable sound generator - connect it to soundcard input and
correct sampling rate till peak from generator signal is placed at correct place
at frequency rule.

5119. AALog DX Cluster Window

Yahoo group: dxsoft
Date: 2011-06-27 18:31:41 UTC
From: lu7hz
Topic: 5119 Message: 5119

Hi,

I'm having troubles for the AALog DX Cluster window to appear when the relevant function is called (or the icon clicked). No version change made recently nor any configuration change I'm concious of.

And also rebooted the machine to ensure it's not because of some stray process blocking it to start.

It just does nothing, no alert no error but no Cluster window.

Is there any known reason why this might be happening? If not, Is there any way such as a trace or debug that being activated might help to understand what is going wrong?

Hi,

Yes, it solves de problem but losses all the configuration that needs to be made again.

Works better to edit the aalog.ini file. It's fixed now.

But I'm not using a dual monitor configuration anymore so somehow this is a bug in the program.

5124. Feature request for SeaTTY

Yahoo group: dxsoft
Date: 2011-08-04 22:16:33 UTC
From: frankk2ncc
Topic: 5042 Message: 5124

I have to admit, I've used my 30-day trial a few times with SEATTY. But finally a proud owner of the best weather radio software I can find and afford. Thanks for all your hard work! I'll try to be more useful than annoying. 8)

I have a few requests to consider for the subject. I'm no guru of the app, so I might want something we already have.

But here are a few thoughts, in no particular order:

-auto start/stop is poor on weak stations. so i don't use it much. 8/ more a gripe than a request.

-magnify needs more than two resolutions! I either have several inches of white border or two inches I can't see.

-should open the same way I close it, full screen, boxes adjusted, and on whatever screen I closed it on.

-simple radio control with a update-able list of all the FAX, NAVTEX, etc. frequencies.

-an RX volume adjustment slider. perhaps then I can easily get the clipping gone in the sound monitor at the bottom. meanwhile I stick to rotating the Signalink knob.

-built-in soundcard sample-rate test

-sometimes I lose the fax pop-up display, and have to hit Mode, HFFAX to get it back. probably should have a 2nd taskbar item for those windows.

-VHF fax, unless that's in some other DXSOFT program? or can already be done with SEATTY?

-the ability, like MULTIPSK, to add false colorizing of satellite images would be nice.

-does the program really need to attempt to decode text in the box when I'm decoding FAX? all that random letters that showing up in a mode that has none.

-the signal display at the top is narrow for a 1440 wide screen. zoom or stretch there would be clearer.

That probably sounds like a long list, but nothing that would stop me from using the program. Or buying it.

Thanks again!

frank, k2ncc

Hello frankk2ncc,

Friday, August 5, 2011, 5:16:33 AM, you wrote:

f> I have to admit, I've used my 30-day trial a few times with SEATTY. But
f> finally a proud owner of the best weather radio software I can find and
f> afford. Thanks for all your hard work! I'll try to be more useful than annoying. 8)

f> I have a few requests to consider for the subject. I'm no guru of the
f> app, so I might want something we already have.

f> But here are a few thoughts, in no particular order:

f> -auto start/stop is poor on weak stations. so i don't use it much. 8/ more a gripe than
a request.

I have an idea how to improve it, but need some time to fix :)

f> -magnify needs more than two resolutions! I either have several inches of
f> white border or two inches I can't see.

What do you mean?
Just click M+ or M- again ...

f> -should open the same way I close it, full screen, boxes adjusted, and on whatever
screen I closed it on.

Just click Setup/Save button to save all settings...

To read a help-file completely is good idea also :)

f> -simple radio control with a update-able list of all the FAX, NAVTEX, etc. frequencies.

f> -an RX volume adjustment slider. perhaps then I can easily get the
f> clipping gone in the sound monitor at the bottom. meanwhile I stick to rotating the
Signalink knob.

I prefer leave this job to Windows, by soundcard mixer...

In another case, hardware overload of card can't be fixed by software,
so if you has hardware volume control, it is more useful to use it then software one.

f> -built-in soundcard sample-rate test

"Slant correction" button does ALL that is need for sample-rate test...

f> -sometimes I lose the fax pop-up display, and have to hit Mode, HFFAX to
f> get it back. probably should have a 2nd taskbar item for those windows.

I'd reduce main window size...

f> -VHF fax, unless that's in some other DXSOFT program? or can already be done with SEATTY?

Not yet...

f> -the ability, like MULTIPSK, to add false colorizing of satellite images would be nice.

What is "false coloring"?

f> -does the program really need to attempt to decode text in the box when
f> I'm decoding FAX? all that random letters that showing up in a mode that has none.

What do you mean?
There are not such things as "decoding text in a FAX mode".

Text is decoded in another, text modes.

f> -the signal display at the top is narrow for a 1440 wide screen. zoom or stretch there would be clearer.

Yes, I see...

f> That probably sounds like a long list, but nothing that would stop me from using the program. Or buying it.

f> Thanks again!

Thank you for such detailed feedback!

--
Best regards,
Sergei

> Just click M+ or M- again ...
>

Oops. (blush) However, it is a large jump between each one. I envision a zoom slider bar. Looks like it's about 50% each click now, which either makes it best fit about half my screen, or a couple inches past it with one zoom click.

>
> Just click Setup/Save button to save all settings...
>

Okay. I missed that too. I hope these weren't in the help files, because I thought I had a clue.

> To read a help-file completely is good idea also :)
>

Yeah, I guess I need to re-visit. I'm usually good at searching for the answer before asking it. All I have is the SEATTY.CHM file, and of course, the forums, which seems to cover everything. Not that complicated of a program to operate, but sometimes it feels counter-intuitive. Like having to hit save, where most programs in my experience save position and layout on exit.

Still, a work of art!

>
> I prefer leave this job to Windows, by soundcard mixer...
>

Yeah, but in Windows 7, it can take one right-click and seven left-clicks to adjust the soundcard levels.

> so if you has hardware volume control, it is more useful to use it then software one.

I agree and that is often recommended. However, many folks aren't using an interface.

> "Slant correction" button does ALL that is need for sample-rate test...

Looks perfect!

> I'd reduce main window size...

SEATTY, full screen HF FAX (or others) on two monitors is just too wonderful to make it smaller window. 8)

Now if I only had a waterfall display built-in!

>
> f> -VHF fax, unless ...
>
> Not yet...
>

Cool. I'm looking to my left and happen to notice a book I just picked up. I recommend it to the group. eBay has been the cheapest place. "Understanding Weatherfax" by Mike Harris. I got mine, shipped, new, under 20 bucks.

Anyway, back on the farm...

> What is "false coloring"?

Some weather satellite image programs magically know how to make the water blue, grass green and clouds white. It's called false coloring because it's not actually what the color is, just the program's best guess. When I've had software do that, it takes a saved image and processes it through a choice of filter styles.

Probably something a little too big to wish for. Sounds like a lot of work.

Something like this:
http://wpcontent.answcdn.com/wikipedia/commons/thumb/9/97/Manila_Bay_Landsat_2000.jpg/220px-Manila_Bay_Landsat_2000.jpg

and this:
http://sharing.krqe.com/sharewlin//photo/2010/08/24/Tropical-Weather_Gree_20100824043846_320_240.JPG

I'm sure you've seen this before, but probably by a different name than I used.

>
> What do you mean?
> There are not such things as "decoding text in a FAX mode".
>

Yeah, I know, but in a noisy signal while decoding HF FAX, no squelch, the program will throw garbage letters, false decodes I guess, in the text area. Haven't you been decoding FAX and letters appear in the RX text box?

I was thinking there could be a way to just shut off the program's attempt to process noise. Seems like it must be thinking about it if it displays it.

Ah, not a problem at all. Just catches my eye when it does so and thought I'd mention it. Feel free to skip this one.

>
> Thank you for such detailed feedback!
>

And thank you for your quick response and hard work! I wish a thousand blessings on you Sergei.

5128. Problem with CWType

Yahoo group: dxsoft
Date: 2011-08-07 18:53:46 UTC
From: b.bart25
Topic: 5128 Message: 5128

I am using CWType ver 2.10 with Rocky ver 3.7 to key a small SDR by Tony Parks. I have a built a circuit to key the SDR. Everything works well, except for one intermittent problem. After I type in about 40 or 50 characters, the characters in the "Tx Window" will stop sending for several characters, and then start. This happens only once in a while. Its almost like a buffer is filling up. I tried reloading the program - no change. CW speed is 16wpm.
The computer cpu is a AMD Athlon64 3200 with 3GB of memory, running win xp.
Suggestions?
Bob w2aws

5130. So can someone tell me a bit more about GW Dataplex?

Yahoo group: dxsoft
Date: 2011-08-15 20:59:12 UTC
From: Benjamin
Topic: 5130 Message: 5130

I got plenty of this digital mode on the maritime bands. I live in Seattle Washington, and use a ICom PCR1000 receiver. They usually encounter fading so that means the signal is taking an ionospheric bounce path, so the signal sources for GW Dataplex clearly are not from near Seattle. But there's no mistake, it's GW Dataplex. I recognize the sound from an audio file I've heard on a radio listening forum.

Also, on RadioReference forums, one person linked to some much needed info that they found on DXSoft Yahoo group here.

"Re: [dxsoft] mode suggestion

Henrik,

I believe only the Wavecom decoders for government use can decode GW Pactor itself.

The channel free markers which can be decoded by Hoka and Skysweeper are not really very interesting - mainly because all they have is a single byte ID and no-one has properly correlated these to known coast stations.

Here is all I have on it if anyone is interested in taking it further:

Globe Wireless Marker Decoding
==============================

Globe Wireless provides HF marine traffic via coast stations.
They use a proprietary modem which sounds similar to Pactor.

Protocol Description

Unfortunately, the protocol they use on HF is a proprietary one for which few decoders are available. The signal uses at least two different modulations: 100 baud, 200Hz shift synchronous FSK and PSK.

Globe Wireless seems to send at least 4 distinct kinds of traffic from their stations:

*Channel Free Marker
ARQ Data (speculative)
Selcall or FSK data (speculative)
PSK data

*Decoding the Channel Free Marker
There is a repetitive channel free marker broadcast when a channel is idle.
This is in 100bd 200Hz shift FSK.

The total number of bits sent in the channel free marker is 231.
The first 98 bits compose this header:

10100101001000000011100010100011000111110110110000 11010100111011010010111111001 0\
111100101111001011

Following this, an 8 bit quantity repeats 6 times - a form of FEC.

The byte corresponds to the following table:

0x47 HLF, Seoul, South Korea
0x49 KEM, Nikolski, Alaska, USA
0x4e VCS, Halifax, Nova Scotia, Canada / VCT, St. Johns, Newfoundland, Canada
0x5d KEJ, Honolulu, Hawaii, USA
0x5e CPK, Santa Cruz, Bolivia / VCT, St. Johns, Newfoundland, Canada
0x5f A9M, Hamala, Bahrain
0x63 9HD, Malta
0xc3 XSV, Tianjin, China
0xc9 VIE, Darwin, Australia / ZLA, Awanui, New Zealand
0xcc HEC, Bern, Switzerland / 9MG, Penang, Malaysia / LFI, Rogaland, Norway
0xd2 ZSC, Capetown, South Africa
0xd7 KPH, San Francisco Radio, San Francisco, California, USA / VJS, Perth, Australia
0xd8 WNU, Slidell Radio, New Orleans, Louisiana, USA
0xdb KHF, Agana, Guam
0xdc KFS, Palo Alto, California, USA
0xdd LSD836, Buenos Aires, Argentina
0xde SAB, Goeteborg, Sweden
0xe3 8PO, Bridgetown, Barbados

There are other stations with unknown bytes.
E.g., 0x3b possibly Pt. Reyes, California, USA.
More work is needed to match all the coast stations.

Credit to Ben Mesander
http://tiki-lounge.com/~ben/radio/gw.html"

However I have some questions about some of the info. Is the 6 repeat FEC bytes a repeat of the station id byte? Or what byte is it repeating?

Also even if you have 98 bits, that is NOT divisible by 8. So I must ask just HOW are the bytes divide up out of this stream of 98 bits? The person who had this info seems to know enough to know that 98 bits compose the header. But he seems to have gotten something wrong. he claims it's 98 bits out of 231 bits. However I know the 231 bit count is bogus. I myself have used a free program called ABox2 (which allows you to make all kinds of audio DSP processing devices with simple block-diagrams) to FSK demodulate it into a bit stream and I counted 152 bits by putting the resulting text file (each line is one bit) into MS Excel and noting how many lines it takes (easily read off of the numbers on the rows of MS Excel).

So I need a more accurate description if I'm to make a decoder for the channel marker GW Dataplex signal.

PS: It's not a matter of Globe Wireless stations as people like to say it seems, but rather of ships, coastguard stations, etc, who are using Globe Wireless hardware for their digital

communications.

5131. Yaesu FT-920 + goodies for sale

Yahoo group: dxsoft
Date: 2011-08-17 14:02:15 UTC
From: oceanbiz01
Topic: 5131 Message: 5131

Good Day to All.

While it pains me to do so, I am downsizing my shack and the FT-920 is part of the downsizing.
This 920 is in immaculate physical condition. I sent it to Yaesu to have the ATU repaired and Yaesu did the repair and in their repair report they mentioned that the FT-920 meets all Yaesu Specs. They went through a complete alignment apparently, following ATU repair. I have the documents from Yaesu to prove it.

Included:
FT-920
MARS/CAP 60 Meter Mod installed
Installed CW Filter, SSB Filter, AM Filter, FM Board and TCXO.
Original MH-31B8 Hand Mic still in it's box
Original Oscillator in separate box that was replaced with the TCXO
Spare red and green buttons for the RX and TX buttons. (I replaced one but had bought spares) .
Original Manual and DC power cord
As a bonus:
Donner Digital Systems interface for RTTY, PSK, SSTV etc. New unused and has the correct Mini DIN plug for FT-897D and FT-817ND. But also included in the correct large DIN plug for the DATA jack on the 920. Also included is a mating female connector for the MINI-DIN so that an adapter cable can be made to go from the Donner connector to the FT-920 .
All documentation will be included.

I worked a heck of a lot of DX with this radio from 160 through 6 meters. I just now turned it on and connected it to my vertical antenna just to make sure that it is humming right along and it sounds great. Transmits just as good.

Asking $950 free UPS Ground shipping to anywhere in the lower 48 states. Any place outside of the lower 48 will cost extra. I will like payment by Paypal . Paypal is preferred sent as a gift to avoid my being charged the Paypal 3% fee.

Also for sale:
TE Systems 0510G 6 meter brick amplifier with DC power Cord and manual $350.00 + shipping cost

MFJ-989C Versa Tuner 3 KW Roller Inductor type with manual. $250 + shipping cost

MFJ-1279 Digital Interface $50 + shipping

MFJ-1263 Microphone Switch $50 + shipping

Interested parties should email me directly at dan-schaaf@...

Thanks for your consideration

Dan K3ZXL

A soundcard can NOT be "on virtual com port".

Soundcard and com-port are _different_ devices.

I> (SILICON LABS CP210x USB TO UART BRIDGE (COM5))

I> and do not work(??).

What exactly do not work?

I have been a Ham (Technician) for a bit over one year. Currently using 2 meters and 400 with a Yaesu HT. I have been monitoring PSK-31 using my Icom R75 receiver and a 100+ foot random wire which runs along the top of my wooden fence about 6 feet high and is fed by coaxial cable with a balun.

I will be testing for my General ticket in about 3 weeks and expect to pass it fairly easily. I will then be buying a HF transceiver for PSK31 and some phone as well and will sell my R75. I have limitations on my antenna choice due to homeowner's rules and regulations concerning visibility from the street. Also I am 78 years old with limited mobility and will have to pay a handyman to erect the antenna if it involves climbing a ladder.

Therefore I need the advice from more experience people on the selection of a transceiver (100 W maximum) and an antenna setup. I prefer to keep my receiver cost below $1000 and perhaps only a simple antenna. An elevated dipole and rotator would not be approved. Advice and pointing to some helpful documentation would help.

The Yaesu FT-897D is a fine choice and it connects nicely with DXSoft and DXAtlas software. Can you install a vertical antenna ? If deed restricted, many people install a vertical antenna inside PVC tubing and hang a flag on it. Stealth antenna !!!
A Hustler 6BTV antenna works well in this configuration.

Hi Neil,

Many a contact has been made with an antenna strung under the eaves or in the attic. I have a G5RV-Jr in my attic (56 ft long) and I run 100 watts to a Kenwood TS-570D with external tuner. I worked Hawaii on 50 watts off the end of the antenna from Phoenix and got a 59 report. It can be done. PSK should be a breeze.

Hi Neil,

If you live under the tree(s), throw up wire over them and make a loop.

No radials needed. Any polarization is possible.

In my example: 270'(85m) wire on 2 big trees, FT-897 + 9:1 balun + tuner.

SWR on ALL bands, including 50 mHz , 1.1 - 1.3 in CW and SSB ranges.

I live in RV camping with Rule 31:"No ham radio usage".

All telescopic poles with slopers were taken off because of gossips,

hassle and trouble. I tried also another antennas ... at night.

Now my ugly loop is almost stealthy and works fantastically in contests.

For all interesting about my activity is a small HF mini-Bugcatcher,

MFJ-1624 on the roof of my car and my always answer: "Yes, ham radio

from my car outside the camping. Besides, I might save your life in

disaster when the electrical power would be out."

Regards,

Leo, N3GD

Neil--
Stick in there, I'm 84 and active, but Iris wont let me climb, either.
For PSK31, 20M is very good, and only needs a 33' Dipole. That short, you may be able to get it higher.
I recommend the Yaesu FT-450, hands down. It is small and does 100 W on all HF plus 6M. Go to the Yaesu site and get the brochure and the operating manual.
Join the FT-450 list, and the Logger32 list (Called Hamlogger). Use either Logger32 or DXLab, NOT HRD. (HRD is a pain, but fancy)
Good luck-- Bill--W4BSG

From: George
Topic: 5137 Message: 5143

Hey Neil:

I'll be happy to give you some information but you need to know that I am almost 86 years old and my opinions my not be at all in line with what you want to do.

First let me say that I am kind of sick of Ham Radio!! Reception is really bad on 20 meters, which is where I like to operate. I do try to get on two different 20 meter nets every day, but most days it's very difficult to have a decent QSO. However, I do have an wonderful alternative to all of this mess which I will now tell you about.

I want to tell you about a computer based Ham Radio system called CQ100. All you need to become active is the Soft Ware and a microphone!!! You can operate on 10 through 80 meters at any time of the day or night and every QSO is an S9 quality. You are talking of spending at lot of money and are probably going to be faced with some difficult antenna problems. Who needs all of that trouble when CQ100 is available for you to consider. I'm going to give you the address for CQ100 and you can check it out for yourself. Your Tech license is good enough and you can try CQ100 for three months for FREE. If you like it (I'm sure you will) then you can become a member for $32.00 per year. That's all you need to spend to QSO with England, South America or Japan, or any other country any time you wish. Is CQ100 real Ham Radio - no it not in the very strictest sense of the word, but it does give you all of the pleasures of Ham Radio for a very small investment and the results are always better than most any Ham using thousands of dollars worth of latest equipment will ever be able to show you. After you spend your $1000.00 and probably plenty more you probably will still "NOT" be able to talk to England or Japan or any other far away county at any time.

Here is the address: qsonet.com

Check them out Neil - you will be very surprised at what you are going to see.

Best of luck to you. 73's. George

From: Dan Fisher AI4GK
Topic: 5137 Message: 5144

George,

First, I know this is off topic, but I feel compelled to respond.

I'm sorry you haven't had good luck with ham radio and have had to resort to the Internet, but I don't believe that we should be discouraging new and/or upgrading hams. Yes, I do have a pretty nice station. About 7 years ago I bought a Kenwood TS-2000. I spent the money because I had it at the time. A $400 (new) or even less expensive (used) radio would get out just as well. I do have a 65 foot tower and a triband beam, both of which I purchased used for a couple hundred dollars.

However, I do a lot of work mobile. I talk to England, Ireland, and many other places using 100 Watts and a Hamstick. In June, about 0200 in South Carolina, I worked Russia, 3 Israel stations (one of them mobile), a maritime mobile in the Pacific, and someone near New Zealand-all with the 100- Watt mobile radio and Hamstick. A few weeks ago I was mobile in Florida (my home state) and had a nice, 20-minute QSO with a fellow in Australia.

You can't tell me that there is no DX to be worked on HF. It is there to be relished and enjoyed. Do we have to work for it? Absolutely! But that adds to the fun, the thrill and the feeling of accomplishment. It's like going fishing. You can get a fishing pole and some tackle and go out looking for fish-sometimes you catch some, sometimes not, but most of the fun is in getting out and doing it. Or, you can go to the store and have the clerk hand you your fish. Yes, you "catch" one every time, but there's not a whole lot of accomplishment in that, is there?

Do I sometimes use IRLP or Echolink? Yes, sometimes, for specific reasons. But those occasions are rare, indeed. You stick with your CQ100. I'll stick with my antennas and the ionosphere. You know, you can use Microsoft or Yahoo Messenger and save the $32/year. They're free.

Dear Dan!
Even for me, for the radioham with the experience for more than 48 years it was so conclusively yr story and experience with hamstick and other details! As to yr comparison of our hobby with fishing it's absolutely right! I also use this example during my discussion with other people abt the reason of our hobby!
Thanks for yr story and info. Be sure that in Russia there are many hams with the same ideas!!!
Regards and best 73!

5146. AALog - Any updates to prefix new DXCC country - ST0

Yahoo group: dxsoft
Date: 2011-09-05 13:56:23 UTC
From: Erik Nielsen
Topic: 5146 Message: 5146

Hi

I saw that South-Sudan was recognized as a new country to DXCC so there are now 341 countries.

Is there any updates to AALog (build 3.0.3.1143) database adding this new country ??

How can I select mono or left or right?

Any chance to have 2 windows in TrueTTY? One for left and one for right stereo channels? This way I can see up band in split operation at the same time that I can see the DX signal. I have dual receiver FT-2000 and it produces left and right audio output on back panel connector.

I agree, this would be a great feature for TrueTTY.

Subject: [dxsoft] New member - questions for the group

I have been a Ham (Technician) for a bit over one year. Currently using 2 meters and 400 with a Yaesu HT. I have been monitoring PSK-31 using my Icom R75 receiver and a 100+ foot random wire which runs along the top of my wooden fence about 6 feet high and is fed by coaxial cable with a balun.

I will be testing for my General ticket in about 3 weeks and expect to pass it fairly easily. I will then be buying a HF transceiver for PSK31 and some phone as well and will sell my R75. I have limitations on my antenna choice due to homeowner's rules and regulations concerning visibility from the street. Also I am 78 years old with limited mobility and will have to pay a handyman to erect the antenna if it involves climbing a ladder.

Therefore I need the advice from more experience people on the selection of a transceiver (100 W maximum) and an antenna setup. I prefer to keep my receiver cost below $1000 and perhaps only a simple antenna. An elevated dipole and rotator would not be approved. Advice and pointing to some helpful documentation would help.

Good morning,
I am a new ham, just got my tech lic. Aug. 25 and just passed general this past Wed.
I am KK4DXM.

I was told I might want to look into PSK31 as a possible medium. Can you steer me towards more information, software and equipment. I will try and lean code but that was the bug-a-boo that kept me out of ham radio all these years.
I live in West Central Florida about 70 miles north of Tampa Bay.

Hello Gloria,
Welcome to the hobby.
I use the TrueTTY software. It does PSK, RTTY and some other digital modes. Excellent software. There is also CWGet and CWType software. Using these will get you CW contacts and may also help you learn the CW along the way.
I am in SW Florida.

Hi Paul,
 Well Sopchoppy is about 3.5 hrs south and east of you. I am located about 70 north of Tampa on the coast, 13 miles south of Crystal River on rte 19.

Being on a limited budget I am looking into setting up a PSK31 system. and try building some homebrew stuff.
 I am an active member in training for CERT and ARES down here and I am applying for my VEC.

Gotta the grey matter perculating.

Gloria

If you are on a limited budget, I have some older Yaesu radios that I have reconditioned and performed electrical alignment on. Both radios are FT-301 models 160 meters through 10 meters. 100 watts output maximum. CW, RTTY (Digimodes) and SSB. These radios have hot receivers and are worthy of ownership. No CPU type circuitry, all analog, and therefore easy to service and maintain.
These radios have a booster amp on teh back that can be removed and teh radios can be used as QRP up to 10 watts output.

If you are interested or know anyone interested, these are good starter radios as well as better-than-starter radios. There are many folks who own these just as collector items. Approximate age is 25 years since manufacture.

They can easily be used to drive a linear amplifier in the future if desired.

I also have a digital interface which goes between the radio and computer .

Gloria,

You might try eham.net. There are a lot of ideas there you could try. You can subscribe if you think it is worth it. If you can afford an ARRL membership that would help too as they have information to download too. I have been licensed since 1971 and an ARRL lifer since 1976. I have used West Mountain for PSK31. I have transmit level problems but I hear OK. I have the Plug and Play set-up with a TS-140S by Kenwood. If you work PSK-31 you do not want to run much power. Maybe 20-watts would be enough especially if the radio is rated at 100-watts. You can run 5-watts but I have not done that successfully. There is an el cheapo way of hooking up PSK in the ARRL information you might try to see how that works using a microphone.

5167. CwGet 2.26 is released

Yahoo group: dxsoft
Date: 2011-09-13 16:00:33 UTC
From: Sergei Podstrigailo
Topic: 5167 Message: 5167

Hello All,

I just have uploaded CwGet 2.26 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

--
Best regards,
Sergei

==========

CwGet Versions History
V2.26
The "Setup/Interface/Output soundcard channel" option (Mono/Left/Right) can be used
to select output channel of soundcard.
V2.25
The Ctrl-U hotkey switches "Tuning Rig by" state between
"NONE" and last selected tuning method ("Main VFO" or "RIT").
The "Setup/Interface/Input soundcard channel" option (Mono/Left/Right) can be used
to select one of two sound sources connected to a single soundcard.
The command line argument "/c Filename" can be used to open capture
file at the program startup.
V2.20
The "Setup/Text/Swedish charset" option was added.
V2.10
When the "Sp.lock" button is pressed, minimal and maximal speed (in LPM) are defined
by regulators at left hand side of this button.
Click to this button with "Ctrl" key pressed moves center value of speed limit to
a current speed.
The "Setup/Multi-decoder/Use speed limits from main decoder" option defines
if these speed limits are used in multi-decoder window also.
The "Setup/View/Always on top" option is used in place of "OnTop" button now.
V2.0
AALog 3.0 support was made.
An option "Use mouse wheel for tuning" was made.
V1.90
Most settings are being selected in the separate window now,
which is opened by the "Setup" menu.
"Main Filter", "Burst Filter" and "Sound Output" sub-menus are opened by the "Filters"
menu.
The "Multi-Channel decoder" command is moved into the "File" menu.
"Save Buffer" hotkey is Ctrl-S now.

Ctrl-F hotkey switches "Sound Output" state between "Sound Without Filtering"
and last selected filter (or "Sound Off" state, if it was selected last).
Multichannel-decoder font and background is defined separately from main
RX Window settings.

Auto-threshold process in the main and multi-channel decoder works better now.
Auto-threshold low limit can be defined manually if the
"Setup/Interface/Enable manual auto-threshold limit" option is selected.
This limit is used not as minimal value now, but as level of input noise.

The "Setup/Multi-decoder/Use manual auto-threshold limit from main decoder" option
enables using of user-defined limit in the multi-channel decoder.
V1.80
Options "Setup/Put Time Marks to a Capture File" and
"Setup/Use UTC Time" were made.
[...]

Whats new in ver 2.26 ???
ED K8OT

In a message dated 9/13/2011 12:00:46 P.M. Eastern Daylight Time,
amx2@... writes:

Hello All,

I just have uploaded CwGet 2.26 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

--
Best regards,
Sergei

==

CwGet Versions History
V2.26
The "Setup/Interface/Output soundcard channel" option (Mono/Left/Right)
can be used
to select output channel of soundcard.
V2.25
The Ctrl-U hotkey switches "Tuning Rig by" state between
"NONE" and last selected tuning method ("Main VFO" or "RIT").
The "Setup/Interface/Input soundcard channel" option (Mono/Left/Right) can
be used
to select one of two sound sources connected to a single soundcard.
The command line argument "/c Filename" can be used to open capture
file at the program startup.
V2.20
The "Setup/Text/Swedish charset" option was added.
V2.10
When the "Sp.lock" button is pressed, minimal and maximal speed (in LPM)
are defined
by regulators at left hand side of this button.
Click to this button with "Ctrl" key pressed moves center value of speed
limit to
a current speed.
The "Setup/Multi-decoder/Use speed limits from main decoder" option defines
if these speed limits are used in multi-decoder window also.
The "Setup/View/Always on top" option is used in place of "OnTop" button
now.
V2.0
AALog 3.0 support was made.

An option "Use mouse wheel for tuning" was made.
V1.90
Most settings are being selected in the separate window now,
which is opened by the "Setup" menu.
"Main Filter", "Burst Filter" and "Sound Output" sub-menus are opened by
the "Filters" menu.
The "Multi-Channel decoder" command is moved into the "File" menu.
"Save Buffer" hotkey is Ctrl-S now.

Ctrl-F hotkey switches "Sound Output" state between "Sound Without
Filtering"
and last selected filter (or "Sound Off" state, if it was selected last).
Multichannel-decoder font and background is defined separately from main
RX Window settings.

Auto-threshold process in the main and multi-channel decoder works better
now.
Auto-threshold low limit can be defined manually if the
"Setup/Interface/Enable manual auto-threshold limit" option is selected.
This limit is used not as minimal value now, but as level of input noise.

The "Setup/Multi-decoder/Use manual auto-threshold limit from main
decoder" option
enables using of user-defined limit in the multi-channel decoder.
V1.80
Options "Setup/Put Time Marks to a Capture File" and
"Setup/Use UTC Time" were made.

5171. TrueTTY.ini file

Yahoo group: dxsoft
Date: 2011-10-07 13:58:46 UTC
From: wgtayloruk
Topic: 5171 Message: 5171

Hi All,

Since upgrading to a new PC with Windows 7 Pro & re-installing TrueTTY I cannot find the truetty.ini file. I have downloaded & installed the latest version of Truetty (v2.85) but I cannot find the ini file. An in depth search of the PC's hard disc drive has found nothing, therefore I do not appear to have any settings saved.

How can I restore the file?

73,

Gary - G4WGT.

Gary
Thanks to Bill Gates

It is best to install software in Windows 7, not in the Program Files, but in a separate directory on C: such as C:/Ham Radio or similar.
The the ini file will be available.

TRUETTY.INI is located in a working directory of software, which is defined by "Start In" property of TrueTTY shortcut.
By default it is something like "Application Data\All Users\TrueTTY".
Take to attention, that "All Users" is hidden folder...

5174. Re: [dxsoft] TrueTTY.ini file

Yahoo group: dxsoft
Date: 2011-10-07 19:59:53 UTC
From: W G Taylor
Topic: 5171 Message: 5174

Hi Dan,

Thanks for the info, I do already install in a different folder from "Program Files".

I have in fact found the truetty.ini file after a lot of trials & tribulations today. It was residing in a hidden folder which is usually seen in previous Windows versions :-

C:\Documents and Settings\all users\Application Data\Truetty

If you type that into the "Windows Explorer" address bar it will take you to the folder, if you want to regularly go there it is possible to create a short-cut to the folder on the Desktop.

I hope this will help others who get "Bugged" with W7.

73 de Gary - G4WGT.

5179. Re: [dxsoft] AALog 3 problem latest version

Yahoo group: dxsoft
Date: 2011-10-10 12:32:22 UTC
From: Dan Schaaf
Topic: 5171 Message: 5179

Dear Sergei
AALog 3 is not sending the correct 60 meter data to Bandmaster.
As a result, if I log a QSO on 60 meters, Bandmaster cluster spot stays in RED.
This has been a problem for a long time.
Can you please fix it.

Best Regards
Dan Schaaf

Hello, Dan!

BM does not support 60m as other band.

Are you have worked this country ONLY on 60 meters? And it RED for all
other bands? Or it still RED in 60 meters segment only?

Best regards

From: özer öksüz
Topic: 5196 Message: 5196

Hi all!

I try to upgrade from 2.47 to 3 with many problems.
My worked and confirmed DXCC is going about 10 country down.
2.47 generates wrong ADIF.ADIF counts some 1.8 Mhz contacts as 17 Meters.
And many other wrong award datas from 2.47 to 3.

How can I fix?

73!

Tenth digit is MMSI extention.
It is used if there is several devices at one ship.

5200. AALog ADIF Export

Yahoo group: dxsoft
Date: 2011-11-09 12:25:19 UTC
From: lu7hz
Topic: 5200 Message: 5200

Hello,

I'm looking for a way to export log records, if at all possible within a date range, as part of an automated script not requiring interaction with the GUI.

Like invoking AALog with some parameters and getting the export done without actually bringing the program up.

Or, if this is not possible, a way to extract from the RDBMS the relevant records, also in batch form out ouf a script. But in this case I would need the engine and some clues on the table design.

Any information?

Thanks Pedro LU7HZ

5201. registration for my CWGET software

Yahoo group: dxsoft

5207. cwdaemon

Yahoo group: dxsoft
Date: 2011-11-18 09:49:55 UTC
From: geoff
Topic: 5207 Message: 5207

Has anyone had any issues with running cwdaemon and Ubuntu 10.04? I have used it sucessfully on Ubuntu 9.04, and the latest release 11.10 but can't get it to talk to netcat (via UDP port 6789)on v 10.04. When I establish a link to cwdaemon on the localhost, i.e. nc -u 127.0.0.1 6789 and send a character I get a continuous tone from the pc speaker and no change of state on the DTR CTS serial port I am using.

Any ideas de G4AKW

Yahoo group: dxsoft
Date: 2011-11-20 16:52:54 UTC
From: Alexander Anipkin
Topic: 5209 Message: 5209

Hello

I just upload new version to websites

Update from previous versions

www.dxsoft.com//aal3-upd.zip
www.hamport.com//aal3-upd.zip

Full package

www.dxsoft.com//aal3.zip
www.hamport.com//aal3.zip

Whats new:
- Fixed several bugs
+ South Sudan added
+ telnet and spots window are separate now
+ keep alive feature in the telnet window
+ like BandMaster view added in the spot window
+ pile-up mode in the New qso window (Draft QSO list tab)

--
Best regards
Alexander

Hello Alexander,

No, I mean www.qrz.com.

There are logprogramms who have a link with www.qrz.com. When you type
in a callsign in the logprogramm then it will open a small window with
the information of the callsign on www.qrz.com. This is very very useful
and convenient!

Hans
AALog can do this in New QSO Window, but you must click the button in New QSO window manually. Then QRZ page comes up. Then you can right click on a ham's name for example and a label box appears. It will insert name, for example in Name box in New QSO window.

Best Regards

Hello, Hans!
21.11.2011 20:14, Hans Remeeus пишет:

Display only info from Qrz.com is violation of it's license. AALog
display full page from QRZ.COM.
I planing add interface with http://www.hamqth.com
It's free. But not so big like QRZ.com

Hello Alexander,

Excellent!

The best way is a link/interface between AALog and something like
hamqth.com or qrz.com.
When we enter the callsign in the New QSO window, AALog automatically
will get the OM's information (like name, QTH, grid, distance, zone,
etc.) from the internetsite and puts it on the right places in the New
QSO window. This would be great!!

From: Hans Remeeus
Topic: 5209 Message: 5224

Hello Alexander,

I know, but the problem with CD's is that it is old information and they
are expensive.
The information on the internet is updated (you can do it yourself) and
without costs.

73!

Vriendelijke groeten,
Hans Remeeus (PA1HR)
http://www.remeeus.eu
http://www.hansremeeus.nl
Communication is about people, the rest is technology.

Hello Dan,

IMHO hamqth.com would be a very good alternative for qrz.com.

73,
Hans Remeeus (PA1HR)
http://www.remeeus.eu
http://www.hansremeeus.nl
Communication is about people, the rest is technology.

5227. Trying to migrating data from AAlog v2.46

Yahoo group: dxsoft
Date: 2011-11-29 00:28:13 UTC
From: Real Martel
Topic: 5227 Message: 5227

AALOG v3.1
Trying to migrating data from AAlog v2.46

Option One
cpy2to3 option "Check for Error" give me Wrong Band on almost callsign.
(some band data have 10M, some have 28)

Option Two
Opening AALog3 and trying import ADIF (save on V2.46) give me: save data error! on almost callsign.

Is this the correct way to migrate without loosing all my database?
Wind XP platform many thanks VE2DSK

5228. FWD: I DID IT!!!

Probably you already registered this software.

Run SeaTTY and click Ctrl-Alt-E to show registration window...

Topic: 5236 Message: 5238

First of all, it is Dan Schaaf, not Dan Schaff.

Second, My email had been hacked. Not my password. These spam messages have gone out through my email client.
How do I know? Because I get bounced messages back to me from individuals who received the same spam as the Yahoo Groups received. And because it is not necessary to log into Yahoo to send a message to a group. All you need to do is to reply to a Yahoo group message directly from your email client. It is that system that has been hacked.

There is nothing I can do about it short of changing my email address which I will NOT do because my email address is also used for my business..

If I am blocked by a moderator, then so be it. But there is nothing I can do about this problem.

Bob
No problem. I think Spam is the way of the future and we have to live with it and delete it. Just like junk printed mail in my mailbox.
Most moderators do not sit in front of their PC waiting for spam that they can delete. Some moderators check messages once every 2 weeks , which is why some of my posts show up long after anyone cares to read it.
As long as there are no viruses or trojans or worms in my email , I just trash them. and let the antivirus software take care of the rest.

5241. Issues with AAlog and Rig Control

Yahoo group: dxsoft
Date: 2011-12-21 23:10:44 UTC
From: N0IRM
Topic: 5241 Message: 5241

I will see if I can spark any activity in the group. :-)

Im am using AAlog with Omni Rig. Also using Bandmaster, CWType and CWget along with True TTY. MY OS is Windows XP. My rig is a Yaesu FT2000 and right now Im using a true serial connection but have also tried multiple USB to serial conversions with the same problem. I have been dealing with an issues with the CAT control of the rig and the software. It seems while using the software no matter what settings I try I loose connection to the rig from time to time. I can use the same computer and cables with the Yaesu rig control software or N1MM logger with no issues. I have tried to isolate the issue to within one of the programs or another and cant seem to. I dont seem to have the issue while just running Omni Rig stand alone.

Any ideas or suggestions. Thanks for any help.

I sometimes have the same problem. I have the exact same setup as you have. MY PC used to crash a lot, so I got the latest Serial to USB adapters compatible with XP SP3. No more crashes.
Occasionally, when I mouse click on a cluster spot, the radio does not change. but if I right click on the spot and then click Tune at Spot, the radio changes.

BTW, I rewrote the INI file for the FT2000 to actually make it work correctly. It will be listed in the Omni Rig List as FT2000PEPAFSK.ini

If you have any other questions, please let me know

Correction on INI file name

FT-2KAFSKPEPV3.ini

Use it if you use AFSK for RTTY/PSK

FT-2KFSKPEPV3.ini if you use FSK

r> Has anyone managed to get CWType to work with the Icom IC7000? If so, what were the settings?

Settings are depend of your hardware CW-interface, not your transceiver.

Thanks Sergei,

I have a CI-V connection from the transceiver to COM3, and a
Signalink USB for the sound card. The Signalink is connected to the
6pin accessory port on the IC7000.

AFAIK Signalink has PTT-key, but it has not CW-key,
so it is not appropriate interface for CW...

5251. Name filling AALog/CWType

Yahoo group: dxsoft
Date: 2011-12-24 22:28:00 UTC
From: lu7hz
Topic: 5251 Message: 5251

Hello,

I'm using AALog 3.0 with CWType. AALog is configured to search names in the QRZ.com local data base so when a station is populated in the C: edit field of CWType it's data is shown in the New QSO window of AALog.

However I would like the Name field in AALog to populate then N: field of CWType or to be made otherwise available for macros in CWType.

According with the help the iName macro can be used in CWType to carry the name in AALog, however when used in a macro it's replaced by ***. Later it says that for AALog after 3.0 jName should be used instead and in this case it's replaced with blanks.

In no case the name at AALog is propagated back to CWType.

Any help or indication on how to make it happen?

TU and MX! de Pedro LU7HZ

5252. HamCAP and VOACAP

Yahoo group: dxsoft
Date: 2011-12-25 00:18:55 UTC
From: rlindzen
Topic: 5252 Message: 5252

The instructions suggest that HamCAP automatically runs and uses VOACAP. However, my impression is that HamCAP simply assumes SS#=63 and Kp=3. What am I doing wrong? Or, as likely, what am I misunderstanding?

What all these letters and numbers mean? :)

I think them are software, but not DXsoft software...

5256. Automatic Update of eQSL/LoTW fields

Yahoo group: dxsoft
Date: 2012-01-01 23:33:29 UTC
From: lu7hz
Topic: 5256 Message: 5256

Hello,

Hope everybody had a wonderful HNY eve with their beloved ones.

I've a semiautomated process to upload my activity into eQSL, send it to my QSL manager and also create signed records for LoTW.

My first question would be if there is a way to create an export in ADIF format just by invoking AALog with certain parameters from the command line (this is, not doing it manually).

My second question would be if there is a way to update the content of the eQSL/LoTW flags both received and sent thru some external mean; as an example loading an ADIF file with just that information changed to be updated at the main database.

My third question is of a more general nature, is there any documented way to access the underlying database used by AALog by an external program (assumed using the right libraries and interfaces to do so); what is the RDBMS engine used by AALog, is there any information about the data design?

73 de Pedro LU7HZ

No such feature

Yes. AALog has UPDATE mode for import. If call/date/timeband/ is the
same it update QSO with data from the imported file.

>
> My third question is of a more general nature, is there any documented

AALog use embedded version of Firebird 2.*. It allow single connection
to database. You can install full version of Firebird for multiply
connection to aalog.gdb in the same time

The best way is sort your log by band and convert all entries into the
same band format using global edit feature.

>
> Option Two
> Opening AALog3 and trying import ADIF (save on V2.46) give me: save data

5263. a few wishes, or perhaps minor bugs

Yahoo group: dxsoft
Date: 2012-01-06 20:01:24 UTC
From: n0rq
Topic: 5263 Message: 5263

Running AALOG v3.1.0.1157 here under WinXP.

In AWARDS MANAGER, Worked All States, Nebraska is abbreviated wrong -- it says NB, should be NE.

In AWARDS MANAGER, Grids, the LoTW button in the lower-right is shaded -- cannot click on it, so I cannot see confirmation totals with LOTW turned on.

When I double-click on a QSO, to go into the EDIT QSO window, when I hit CTRL+I to add info from QRZ database, it blanks out other info that was already there. Specifically, if I had the grid square there already, and do CTRL+I, the name & state are added, but the GRID info is blanked out. It would be nice if it left it there.

5268. SeaTTY 2.35 is released

Yahoo group: dxsoft
Date: 2012-01-30 14:52:34 UTC
From: Sergei Podstrigailo
Topic: 5268 Message: 5268

Hello All,

I just have uploaded SeaTTY to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

--
Best regards,
Sergei

==========
SeaTTY versions history

V2.35
Maximum number of RTTY/NAVTEX Station ID filter items is increased to 32.
Filter for GMDSS DSC message format was made.
Some minor improvements were made.
V2.31
The "Setup / Other / Start SAME message by 1050 Hz tone" option was made.
V2.30
More settings for spectrogram and oscillogram colors were made.
V2.21
Options for tuning auto start / auto stop parameters of FAX mode were made.
See "Setup/FAX" page.
V2.20
Message filename shows time of message start, not time of message end now.
The "Setup / Other / EOM timeout in SAME" option was made.
A bug was fixed - a message with station ID in filename couldn't be really deleted by
"Delete" command.
"Auto start" and "Auto stop" procedures were slightly optimized in HF-FAX mode.
V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.
V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.

5272. FSK, AFSK and narrow filter

Yahoo group: dxsoft
Date: 2012-01-31 04:00:45 UTC
From: Sergei Podstrigailo
Topic: 5268 Message: 5272

Hello Jack,

Tuesday, January 31, 2012, 9:03:09 AM, you wrote:

JK> would work and the USB issue would not come into play.

NO !!!!
Using AFSK under Windows is MUCH better way, then using "software FSK" via DTR,
especially via "DTR at USB/COM converter".

Option "Setup/Tuning/Follow VFOB by VFOA with offset" is especially made
to use narrow FSK filter with AFSK.

At my Kenwood TS-870 I just receive by VFO-A in FSK-R mode,
but transmit by VFO-B in USB mode.
Offset in "Follow VFOB by VFOA" is "-2295"

Nevertheless, if you want to use FSK, use _true_ FSK by using
COM-port card which support 45 bauds transmission speed
(most of USB/COM converters don't support speeds below 300 bauds).

Subject: [dxsoft] AALog 3.1 Build 1157 available

Hello

I just upload new version to websites

Update from previous versions

www.dxsoft.com//aal3-upd.zip
www.hamport.com//aal3-upd.zip

Full package

www.dxsoft.com//aal3.zip
www.hamport.com//aal3.zip

Whats new:
- Fixed several bugs
+ South Sudan added
+ telnet and spots window are separate now
+ keep alive feature in the telnet window
+ like BandMaster view added in the spot window
+ pile-up mode in the New qso window (Draft QSO list tab)

From: Dan Ziolkowski
Topic: 5276 Message: 5276

Hello all-

After on/off use for several years, bought a license, and have
a few questions--

RE:Filters--

Main--(default 140 Hz)
Burst--(default 200 LPM)

need tips on setup--- help files says that Main "wider is better for higher
speeds"
Can any one better define that?

Burst-- any tips here-- relationship to speed, S/N ratio?

I have tried many combinations of both filters, and find that decode is
spotty at best, especially on poorer S/N signals.
At what S/N ratio should I expect reasonably expect good decode?

what is the purpose of purpose of Speed Lock?

What is "FrB:15" in the lower right corner of display?

Thanks ---

5278. Features for CWGet

Yahoo group: dxsoft
Date: 2012-04-08 18:33:44 UTC
From: lu7hz
Topic: 5278 Message: 5278

Hi,

Having used extensively CWGet under contest scenarios for the past 2 years as a filter I would say the performance is really good as both a signal procesor and a tunning aid. Over the time the features added in support of SO2R schemes and automatic tunning has greatly enhanced the
ability of the program.

There are two glaring features being missed that if available would greatly enhance the usability of the program.

1) A visual clue over the spectrum of the current filter bandwidth, something like a slight change in the tone of the color over the area of the spectrogram that is currently being tuned showing the -3dB BW or similar.

2) The posibility to activate and operate a notch filter together with the existing bandpass filter; specially in the crowded situation of the bands during contest it's highly tiresome to hear the neighboor calling constantly and be able to mentally switch it off.

Thanks, Pedro LU7HZ

5279. Navtex with SeaTTY and Navtmsgs

Yahoo group: dxsoft
Date: 2012-04-08 21:34:34 UTC
From: phil68954321
Topic: 5279 Message: 5279

Hello, i am a new user of SeaTTY and am able to get weatherfax but no navtex so far.

Is there any benefit of using Navtmsgs together with SeaTTY for navtex msgs or can SeaTTY be used alone?

I am using SeaTTY with a Sony 7600GR, i am looking to buy a SW/MW active antenna with a ferrite bar coupler but the frequency range stated for this antenna starts at 530khz, would i still get some improved reception at the 518Khz navtex frequency or is there no benefit at all below 530Khz?

Thanks

SeaTTY be used alone?

Navtmsgs is just service program.
It works with files, received by SeaTTY.

So Navtmsgs can not to improve receiving.

5287. Seatty fax reception

Yahoo group: dxsoft
Date: 2012-04-28 11:37:10 UTC
From: sandy.herbert29
Topic: 5287 Message: 5287

Mr. Podstrigailo,
Â
First let me say that I am very happy with the performance of your program. It is simple to use and does what it is supposed to do

I have noticed that when receiving in fax mode, if the pc screen is switched off by the battery saving routine in Windows, the fax from that point is displaced horizontally. Is this a known problem? When I disable the battery saving function, the problem seems to go away but this means the pc is consuming more energy. Is there another solution?
Â
I am using an Asus X53S portable with Windows 7 and Seatty 2.35.

Regards

>?
>I am using an Asus X53S portable with Windows 7 and Seatty 2.35.

I would guess that this has something to do with other features on
your laptop than the shutting down of the display. I have this as
default in Windows, but never had any issue with horizontal
displacement in fax-reception.

The horizontal displacement is a known problem if you use usb-ports
for audio-management. For instance if you use an ICOM PRC-1500's
USB-audio option this will almost certainly cause a horizontal
displacement. The solution for the IC-1500 is to have audio delivered
to the PC directly to the sound card via 'line in', 'mic in' or
equivalent inputs.

How your laptop is fed audio from your radio isn't clear from your
message, but I think there may be here 'the dog lays buried'.
Is your laptop changing over to a different performance mode when
display is shut down? My guess is that there is something that causes
some sort of buffer problem.

Topic: 5291 Message: 5294

I don't have the N6TR interface, just a simple NPN based keyer, and I do need to swap cables with other programs using D17; just trying to see how to avoid the swap and keep it permanently set up.

Today when you select LPT as the port you can select for PTT and Keyer any combination of pins between D0 and D9.

Once you can configure the pin between D0 and D9 (which the other program doesn't allow as it has the setup hard coded) I wonder if there is either a non documented way to use higher numbered pins as an option or if this can be extended.

Thanks, Pedro LU7HZ

5299. Re: Pins supported at LPT interface of CWType

Yahoo group: dxsoft
Date: 2012-05-30 19:59:34 UTC
From: lu7hz
Topic: 5291 Message: 5299

Hello,

It's there a way to configure the pin used to select the rig when using the parallel interface such as the N6TR?

When using the serial port it can be made, but it seems not to be the case with the parallel one.

Any advice?

For RIG switching in SO2R mode pin 14 of LPT or TxD output of COM-port are used.

Both are not configurable.

5301. [dxsoft] SeaTTY spectrum center freq?

Yahoo group: dxsoft
Date: 2012-06-02 10:28:36 UTC
From: Mats Höwing
Topic: 4859 Message: 5301

Hi Sergei!,

It's a few years since you heared from me! I helped you with th eNAVTEX filters then... remember?
I'm still running SeaTTy in my yacht for both NAVTEX and WEFAX (NASA Marine HF3P) and it works fine. So I'm happy customer!

I have also a NAVTEX reciever at home, just for fun. That reciever delivers a center frequency of 1700 Hz.
Everytime I start SeaTTy it starts with 1500Hz as centre in the spectrum display. I then just draws it to the right number, ad it works. But I would like you to store that value as a setup value, soo when I start Sea TTY it starts with the previous selected value. Is this a possible whish?

BR

Ämne: [dxsoft] SeaTTY 2.31 is published

Hello All,

I just have uploaded SeaTTY 2.31 to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

--
Best regards,
Sergei

==========
SeaTTY versions history

V2.31
The "Setup / Other / Start SAME message by 1050 Hz tone" option was made.
V2.30
More settings for spectrogram and oscillogram colors were made.
V2.21
Options for tuning auto start / auto stop parameters of FAX mode were made.
See "Setup/FAX" page.
V2.20
Message filename shows time of message start, not time of message end now.

The "Setup / Other / EOM timeout in SAME" option was made.
A bug was fixed - a message with station ID in filename couldn't be really deleted by "Delete" command.
"Auto start" and "Auto stop" procedures were slightly optimized in HF-FAX mode.
V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.
V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data" ("ProgramData" under Vista) in place of "Program Files" now.

Sergei,

Yes it is.... aha... guess what!?! It seems to work.. But, don't I need
AFC?

When using AFS there is 2 large and 2 small red bars... I thought the AFC
values set the max differens for the large one from the small one, The small
ones then set by user ....
Can you describe this function?

MH> Can you describe this function?

Let's read help-file together:

The "AFC" button (auto frequency control) adjusts the long red lines (working frequencies) to the
closest peak frequencies. The numbers to the left of the AFC button determines the limits of AFC.
The first number is local deviation in hertzs, i.e. maximal deviation from current frequency.
Second number is global deviation in hertzs, i.e. maximal deviation from last user-selected frequency. User-selected frequencies are shown at spectrogram by short red lines .

Sergei,

Ok, The it is working as thought. Shouldn't the short red lines stick to my choosen freq? They are not when AFC is selected.

When AFC is not selected I only have the long lines. In this case the freeq is stored correctly.

Yupp, That's what I would like!

You see, since I'm using the computer for NAVTEX in my sailing boat there is an issue with the current consumtion onboard since I'm only have power from batteries when the engine is not running.

Early morning when I am asleep I have in the BIOS set an auotistart to start the computer automatically at 7.15 am (5 min before Grimeton Transmission), Then, an autostart on the SeaTTY in XP, half an hour late a "shut down" It works well. But if the freq is not correct I will have no messages recieved...

Soo, if you could fix this I would be happy. I have in fact noticed this since the beginning...

Sergei,
Any plan to change? I have figured out that AFC is needed when signals are weak. So it would be preferable to save the "small "line values..

What do you think?

On another hand,
if you click Setup/Save when SeaTTY is tuned to stantion,
central freq will saved as freq of this stantion...

What is reason to save shifted frequency?

5314. SV: [dxsoft] SeaTTY spectrum center freq?

Yahoo group: dxsoft
Date: 2012-06-06 08:40:10 UTC
From: Mats Höwing
Topic: 4859 Message: 5314

The centre freq should of course be saved but the problem is that th ewrong centre freq is save according to my opinion.
Soo, if i listen to Navtex whith 1700 HZ as centre freq, the AFC may change this freq to 1650 as tuned freq. Specially if no transmission is ongoing...
If I quit at this point next time I start the centre freq will be 1650.
Navtex transmittes in about 4 h interval, so it means in between with AFC selected the "long lines" will "work" a lot and this swill cause a drift of the centre freq from time to time .

I I selcct 1700 by clicking on th efreq scale I woul like this freq to be selected next time as center freq as well.

Am I wrong?

MH> Sergei,
MH> Any plan to change? I have figured out that AFC is needed when signals are
MH> weak. So it would be preferable to save the "small "line values..

MH> What do you think?

On another hand,
if you click Setup/Save when SeaTTY is tuned to stantion,
central freq will saved as freq of this stantion...

What is reason to save shifted frequency?

You are right.
Will be fixed in future version.

I just suggest you workaround - click "Save" when signal _is_ present ...

Jupp, or switch AFC off before saving. The problem remains when I auto
starts and auto shut offs the computer..

Looking forward to a new release!
As you knoe I have used SeaTTY for some years now and
I am very pleased with!

5317. CWget on Win 98 "Unable to allocate or lock memory"

Yahoo group: dxsoft
Date: 2012-06-20 13:33:10 UTC
From: Dan
Topic: 5317 Message: 5317

I'm trying to install CWget on an old laptop with Win98 and only 128 MB memory.
I get an "Unable to allocate or lock memory" error.
Is there anything I can do other than adding memory? There is very little installed on the machine and nothing else is running.

The software for the CW how many MB of memory installed,depends on the speed of the CW with Laptop PC. I also had a problem of that kind I had to change shoft or pc

5319. CW Type hangs PTT

Yahoo group: dxsoft
Date: 2012-06-21 00:21:44 UTC
From: k0gu
Topic: 5319 Message: 5319

Hi all. Recently downloaded CW Type and used my old NA LPT port interface (much like the N6TR interface). The CW sending worked fine but when CW Type keys the PTT the rig will not unkey when CW Type turns TX off. If I unhook the PTT line from the interface the rig unkeys and if I plug it back in the rig is still unkeyed. So the PTT line doesn't seem to be stuck after I unplug the PTT line to the rig.

I have since built both the LPT and serial interfaces in the CW Type documentation and have exactly the same problem. So I am at a loss to figure out how to fix this problem. Operating system is Windows XP Pro if that makes any difference.

Any help out there?

73, Jay K0GU

k> Any help out there?

It looks like mono/stereo jack problem ...

Use stereo jack with central ring contact not connected ...

Check if computer and RIG are both well grounded
(at least if computer box and RIG box are connected together by thick wire).

HI Alexander,

I have downloaded the file you recommended and unzipped into aalog and runed dxcc_change list, but in my list is not again Z8 in spite that I have cfmd ST0R 6 QSOs.

Please help me Alexander, thanks a lot

Daki, 9a2wj

From: Real Martel
Topic: 5342 Message: 5342

I'm using AALOG (3.1) and OmniRIG cat controller.

When i ask external database data, ie NAME- QTH-ETC in new QSO
windows,
NAME - QTH Appear and Disappear...?

When i remove the OmniRIG option in setup everything is correct..: the
QSO data stay on box.
Any idea..?

5346. Import ADIF file overrides other fields

Yahoo group: dxsoft
Date: 2012-08-07 12:47:14 UTC
From: n0rq
Topic: 5346 Message: 5346

Hello.

When I IMPORT an ADIF file downloaded from Logbook of the World (LOTW), AALOG changes some fields that are not in the ADIF file.

For instance, I have a QSO logged, with a freq of 14.076 and RST-sent of -08 and RST-received of -12, when I import the LOTW ADIF file, which does NOT have those fields, AALOG changes the RST fields to 599 and the freq to 14.000.

This is ADIF record I imported:
<APP_LoTW_OWNCALL:4>N0RQ
<STATION_CALLSIGN:4>N0RQ
<CALL:5>NT5HS
<BAND:3>20M
<MODE:4>JT65
<QSO_DATE:8>20120803
<TIME_ON:6>135200
<LOTW_QSL_RCVD:1>Y<LOTW_QSL_SENT:1>Y
<DXCC:3>291
<GRIDsquare:4>EN04
<STATE:2>SD
<eor>

Why is it changing values that already exist in the AALOG entry, and how do I stop it from doing that???

Thank you!

73, Dave N0RQ
www.powerlinenoise.com/n0rq/

I did IMPORT ADIF -- maybe that is the wrong thing to do, even though it is an ADIF file. (And I had USE UPDATE MODE checked.

Please note!
Update mode will update all data with new one if dupe found. In other case
AALog just ignore duplicate qso.

5352. TrueTTY issues in ASCII-8 (for scientific application)

Yahoo group: dxsoft
Date: 2012-08-10 18:59:54 UTC
From: bagpipe3001
Topic: 5352 Message: 5352

Hi All,

I just purchased a couple of TrueTTY licenses and I'm looking for help/ideas on fixing an issue we're observing.

I have a legacy TrueTTY running great with our system, which is software that reads off the COM4 output TrueTTY writes. This is version v2.38.

Now, we're trying to repeat the setup and so we're using v2.85. And somehow we're unable to decode even though I've verified all parameters to be the same.

Is v2.38 available for download?

73,

Martin

5355. SeaTTY 2.36 is released

Yahoo group: dxsoft
Date: 2012-09-06 18:46:07 UTC
From: Sergei Podstrigailo
Topic: 5355 Message: 5355

Hello All,

I just have uploaded SeaTTY 2.36 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

--
Best regards,
Sergei

==========

SeaTTY versions history

V2.36
1000 Hz deviation is supported in HF-FAX mode now.
Minor bug with working frequency saving (if AFC is switched on) is fixed.
V2.35
Maximum number of RTTY/NAVTEX Station ID filter items is increased to 32.
Filter for GMDSS DSC message format was made.
Some minor improvements were made.
V2.31
The "Setup / Other / Start SAME message by 1050 Hz tone" option was made.
V2.30
More settings for spectrogram and oscillogram colors were made.
V2.21
Options for tuning auto start / auto stop parameters of FAX mode were made.
See "Setup/FAX" page.
V2.20
Message filename shows time of message start, not time of message end now.
The "Setup / Other / EOM timeout in SAME" option was made.
A bug was fixed - a message with station ID in filename couldn't be really deleted by
"Delete" command.
"Auto start" and "Auto stop" procedures were slightly optimized in HF-FAX mode.
V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.
V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
V1.80
GMDSS DSC (HF and VHF) messages decoding was made.
[...]

Hi Sergei,
I went to the site- ...Microsoft Win 7 wants to use the playlist extension wpl and SEATTY doesn't recognize it. I tried to rename the file to a .wav but no luck. Can I get just a wav file from you or somewhere?
Thanks
John

Hi Sergei,
The link you sent me when clicked on starts my Window Media Player. The player plays the sound automatic. I was able to save the file but the file get converted to a Windows Media playlist (.wpl). I tried to rename it to a wav file but that did not work. If I use File, Decode from File I get and error...see attached.

So I need a RTTY recording sample file (not a link) with a .wav extension so SEATTY will work.
John

yyr> How I can use an RigExpert Tiny with AATest in CW?

RigExpert Tiny is just USB/COM-port converter.

So use it with CwType (PTT port type is "COM-port via Windows API"),
then use CwType with AATest.

5377. TrueTTY 2.87beta is published

Yahoo group: dxsoft
Date: 2012-10-10 14:19:49 UTC
From: Sergei Podstrigailo
Topic: 5377 Message: 5377

Hello All,

I just have uploaded TrueTTY 2.87 beta to the main site and mirror:

http://www.dxsoft.com/truettyb.zip
http://www.hamport.com/truettyb.zip

--
Best regards,
Sergei

==========
TrueTTY Versions History

V2.87
"Setup/Interface/Message Channel" option is used for multi-RIG support now.
See http://www.dxsoft.com/dxs-exch.zip for details.
"Mono-Left-Right" options define used soundcard channel for input and output.
V2.85
The Ctrl-U hotkey switches "Tuning Rig by" state between
"NONE" and last selected tuning method ("Main VFO" or "RIT").
After switching to RTTY mode speed and shift are not reset to 45 Bd / 170 Hz,
but are set to last values used in this mode.
V2.81
Right mouse button click (or left mouse button with "Shift" key pressed) make
TrueTTY to do fast decoding of one-minute prehistory of signal at selected frequency.
By "Replay" button one-minute prehistory of current signal is fast decoded now.
V2.79
DTMF-decoder was improved.
V2.78
PTT-interface settings were rewritten.
Now PTT can be controlled via:
- COM-port;
- standard LPT-port;
- LPT-port with non-standard addresses (PCI-cards etc.);
- via OmniRig by COM-port control signal pins;
- via OmiRig by CAT-commands;
- via WinKey.
An option "Setup/Tuning/Wheel tuning speed" was made.
A bug with "`[pa]" macros was fixed.
Callsigns and numbers recognition was improved in the "Catch word in contest mode".
V2.76
QPSK-63 mode receiving and transmitting were made.
V2.75
Option "Use mouse wheel for tuning" was made.
A bug was fixed - "Help/Contents" menu didn't work in V2.70.

V2.70
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
/S parameter of command line is not used now.
V2.60
BPSK-125 mode receiving and transmitting were made.
TrueTTY can cooperate with another software as COM-server
(ActiveX object) now.
[...]

5381. 30 Meter Multi Mode Weekend ☐ 27/28 October 2012

Yahoo group: dxsoft
Date: 2012-10-13 14:22:36 UTC
From: Don
Topic: 5381 Message: 5381

30 Meter Multi Mode Weekend

When: October 27th and 28th 2012

Where: 10 MHz - 30 Meter Band (10.100 ☐ 10.150)

Objective: To promote experimenting and using different digital modes on the unique 30 Meter Band.

For a more detailed listing of this event go here:
http://www.30mdg.net/news.html

(You are welcome to post this event information to your other digital friends, Clubs, Yahoo/Google Groups, other Ham Related Websites, etc ☐ please DO help us promote this event - the more that participate the more fun for al and thanks to those that participate on the 30 Meter Band!)

The 30 Meter Digital Group (30MDG) is celebrating .5 year Anniversary, 6,000 members (120DXCC), and our 30MDG Award Program issuing over 31,000 Award Certificates. 30MDG is FREE to join, FREE Awards program with FREE Award software ☐ Ultimate 30 or U30).

GL and as always this is NOT a contest ☐ no start or stop times, no exchanges, no logs to send to anyone, no winners or trophy ☐ this IS to PROMOTE AWARENESS of the 30 METER BAND and the only winners are those that participate and have fun!

Don KB9UMT 30MDG#0001-Founder
And the 30MDG "Team"

5382. Re: SeaTTY 2.36 is released

Yahoo group: dxsoft
Date: 2012-10-16 19:13:53 UTC
From: Dan
Topic: 5355 Message: 5382

I am new to SeaTTY, so I loaded version 2.36. I am using if for recieving weather faxes on a SSB Radio.

I'm having two issues, and I'd appreciate any advice. It's very likely that the root cause is user error.
1) The fax has a horizontal shift every inch or two.
2) Frequently the fax appears to start in the center of the screen, and then wrap around to the center of the screen. One symptom is that there is a black bar down the center of the screen.

In case it's relevant, I was receiving the signal on a boat about 20 miles from the 4,000 watt transmitter.

Any hints will be appreciated.
Dan Marshall

Hello Dan,

Wednesday, October 17, 2012, 2:13:53 AM, you wrote:

D> I am new to SeaTTY, so I loaded version 2.36. I am using if for recieving weather faxes on a SSB Radio.

D> I'm having two issues, and I'd appreciate any advice. It's very likely that the root cause is user error.
D> 1) The fax has a horizontal shift every inch or two.

It means that soundcard lost several buffers.

It can be hardware or software problem.

The most often reason is bad soundcard driver.

Try to renew it...

Another problem can be some software which eat too much processor time...

I am not sure what you mean by horizontal shift, maybe being so close to the transmitter can be an issue. There is a button in SeaTTY weather fax window to fix the black bar in the middle. You click the button then click the middle of the black bar to align the picture.

5397. CQWW Contest - How to correct wrong country in AATest 1.1 ??

Yahoo group: dxsoft
Date: 2012-10-27 11:27:00 UTC
From: Erik Nielsen
Topic: 5397 Message: 5397

I was working in the CQWW SSB contest with AATEST 1.1 and got a contact to
XP1A which is Greenland (OX),
but it was recorded as Denmark (OZ) and therefore I did not get the
multiplier for Greenland.

I tried to update the CTY.DAT file but it did not change, so I wonder which
file is used as input for the multipliers in this contest ??

Exist also a problems with AATest.
1- Window [2.Stat] not worked.
2- Aleatory from time to time number of zone received appear not correct -
worked an JA-stn and appear as 17 zone or 14 zone... etc.

5400. Re: So can someone tell me a bit more about GW Dataplex?

Yahoo group: dxsoft
Date: 2012-11-03 06:25:28 UTC
From: Benjamin
Topic: 5130 Message: 5400

Still I'm waiting for someone to comment on my post, and share their GW Dataplex knowledge with me.

--- In dxsoft@yahoogroups.com, "Benjamin" <BenHutchinson_3@...> wrote:
>
> I got plenty of this digital mode on the maritime bands. I live in Seattle Washington, and use a ICom PCR1000 receiver. They usually encounter fading so that means the signal is taking an ionospheric bounce path, so the signal sources for GW Dataplex clearly are not from near Seattle. But there's no mistake, it's GW Dataplex. I recognize the sound from an audio file I've heard on a radio listening forum.

> However I have some questions about some of the info. Is the 6 repeat FEC bytes a repeat of the station id byte? Or what byte is it repeating?
>
> Also even if you have 98 bits, that is NOT divisible by 8. So I must ask just HOW are the bytes divide up out of this stream of 98 bits? The person who had this info seems to know enough to know that 98 bits compose the header. But he seems to have gotten something wrong. he claims it's 98 bits out of 231 bits. However I know the 231 bit count is bogus. I myself have used a free program called ABox2 (which allows you to make all kinds of audio DSP processing devices with simple block-diagrams) to FSK demodulate it into a bit stream and I counted 152 bits by putting the resulting text file (each line is one bit) into MS Excel and noting how many lines it takes (easily read off of the numbers on the rows of MS Excel).
>

I am looking at CWtype and CWget. I am having a problem with my rig tx on this program. I use a number of other dig program and have no problem. I use a signalink interface with an Icom 7200.(I know I do not need to but have never been able to get it to set up with out.) I have tried all the different sound card that are listed with the different rig set up none will transmit.

Can u help. I would like to use this program just now working for me.

I am using the Signalink with CWtype and CWget with a Yaesu FT-2000 with GREAT success.

On my CWtype settings, of course under interface Key/PTT is None. Under sound the Signalink USB Audio CODEC is selected. Mox & paddle Enable MOX checked, TX on at keyboard selected, TX off at silence selected, Paddle in iambic mode and paddle with Dash/Dot memory selected, all others not selected. On the main CWtype screen make sure the speaker on or off icon is on or "no red X'. I use the ft2K in Digital mode.

I hope this helps, CWtype and CWget are both great tools. I can send you screen shots of my setting or try to help. Feel free to email me direct if you like

SignaLink is using Modulated CW which is not supported by CWtype,
I have tried Ham Radio Deluxe (Digital Master 780) which can handle this.

From: W9NCQ
Topic: 5401 Message: 5408

As a CWType user, I made the CW interface as described in the Help/Content section of CWType. I only use one section of the interface to key the transceiver in break-in mode using the VOX feature on the Kenwood TS-570D. It works great! Turn the VOX off and you can use it as a code practice oscillator if you rig has a sidetone. I also use a USB to 9-pin serial port connector on the computer side and wire the output of the interface in parallel with the code key. Keep the leads short and use ferrite beads to keep the RF out of the computer and radio. In this way you can leave you rig interface connected for digital use and still use the CWType when you want to. I hope that this is helpful.

Topic: 5401 Message: 5409

You do understand that CWType is NOT a digital program?

It sends a "keyed" CW out the designated serial port of your computer. Using four or five parts readily available at a R Shack you build a circuit that converts the serial pulses to simulate an on/off straight key.

Though you can find them commercially built for about $15 - $30 (last time I checked) you can put the parts right inside the serial connection. So I have a serial plug in a COM port and a cable comes out of it to a 1/8 stereo plug with the center connector (Ring) not used. That is how I find most rigs require you to use a straight key - a stereo plug using just the tip and shaft.

CWType works great. If you have a "two in and one out" 1/8 stereo adapter plugged in the key jack, you can put your key and the cable form the serial plug both in and use as desired.

73,
Paul

Subject: [dxsoft] Re: New

You do understand that CWType is NOT a digital program?

It sends a "keyed" CW out the designated serial port of your computer. Using four or five parts readily available at a R Shack you build a circuit that converts the serial pulses to simulate an on/off straight key.

Though you can find them commercially built for about $15 - $30 (last time I checked) you can put the parts right inside the serial connection. So I have a serial plug in a COM port and a cable comes out of it to a 1/8 stereo plug with the center connector (Ring) not used. That is how I find most rigs require you to use a straight key - a stereo plug using just the tip and shaft.

CWType works great. If you have a "two in and one out" 1/8 stereo adapter plugged in the key jack, you can put your key and the cable form the serial plug both in and use as desired.

73,

Paul

5414. TrueTTY 2.90 is released

Yahoo group: dxsoft
Date: 2012-12-06 04:59:25 UTC
From: Sergei Podstrigailo
Topic: 5414 Message: 5414

Hello All,

I uploaded TrueTTY 2.90 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.hamport.com/truetty.zip

--
Best regards,
Sergei

==========

TrueTTY Versions History

V2.90
Some minor improvements were made.
V2.87
"Setup/Interface/Messages channel" option is used for multi-RIG support now.
See http://www.dxsoft.com/dxs-exch.zip for details.
"Mono-Left-Right" options define used soundcard channel for input and output.
V2.85
The Ctrl-U hotkey switches "Tuning Rig by" state between
"NONE" and last selected tuning method ("Main VFO" or "RIT").
After switching to RTTY mode speed and shift are not reset to 45 Bd / 170 Hz,
but are set to last values used in this mode.
V2.81
Right mouse button click (or left mouse button with "Shift" key pressed) make
TrueTTY to do fast decoding of one-minute prehistory of signal at selected frequency.
By "Replay" button one-minute prehistory of current signal is fast decoded now.
V2.79
DTMF-decoder was improved.
V2.78
PTT-interface settings were rewritten.
Now PTT can be controlled via:
- COM-port;
- standard LPT-port;
- LPT-port with non-standard addresses (PCI-cards etc.);
- via OmniRig by COM-port control signal pins;
- via OmiRig by CAT-commands;
- via WinKey.
An option "Setup/Tuning/Wheel tuning speed" was made.
A bug with "`[pa]" macros was fixed.
Callsigns and numbers recognition was improved in the "Catch word in contest mode".
V2.76
QPSK-63 mode receiving and transmitting were made.

V2.75
Option "Use mouse wheel for tuning" was made.
A bug was fixed - "Help/Contents" menu didn't work in V2.70.
V2.70
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
/S parameter of command line is not used now.
V2.60
BPSK-125 mode receiving and transmitting were made.
TrueTTY can cooperate with another software as COM-server
(ActiveX object) now.
V2.57
Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Beacon regulator defines not period, but pause between transmissions now.
V2.56
Minor improvements of RX window text displaying were made.
New options were made:
"Setup / Other / Do not strip received NIL symbols from capture file
and exchange channels";
"Setup / Other / Put time marks to a capture file";
"Setup / MOX & Beacon / Beacon off if my callsign ... is received";
"Setup / MOX & Beacon / Beacon off if any callsign is received twice";
Some options were moved from the "Setup->Interface" page to
the "Setup->MOX & Beacon".
V2.55
Documentation was updated.
W1GEE PTT-interface is supported in LPT/N6TR mode now.
[...]

Sergei, I tried installing the new version 2.90, but I'm getting an error
saying an error occurred while trying to rename a file in the destination
directory. MoveFile failed; code 183
any idea how to fix this. the error showing
C:\Windows\system32\DRIVERS\DXSOFTIO.SYS

It is strange...
May be some antivirus problem...

Try to delete this file manually before installing...

I've downloaded this upgrade whithout problem.
My OP is XP.
It's possible met problem, like me, if you try download the prgram from the link's mail.
In this case seach the correct website and and make the download from there.
Ciao, 73.

5421. Re: [dxsoft] TrueTTY 2.90 is released

Yahoo group: dxsoft
Date: 2012-12-07 15:23:09 UTC
From: Dan Schaaf
Topic: 5414 Message: 5421

Dear Sergei

Can you make a Dual TrueTTY similar to attached picture?

Left side for RX of DX Station and Right Side for LSN/TX up or dn.

Then we can use stereo output of radio for left and right .

Then we can see always the DX according to VFO A and we can always see up band according to VFO B . Radio is dual receiver FT2000 or better. Maybe also Icom and Kenwood?

This is much easier than running to copies of TrueTTY.

Best Regards
Dan Schaaf

==========

TrueTTY Versions History

V2.90
Some minor improvements were made.
V2.87
"Setup/Interface/Messages channel" option is used for multi-RIG support now.
See http://www.dxsoft.com/dxs-exch.zip for details.
"Mono-Left-Right" options define used soundcard channel for input and
output.
V2.85
The Ctrl-U hotkey switches "Tuning Rig by" state between
"NONE" and last selected tuning method ("Main VFO" or "RIT").
After switching to RTTY mode speed and shift are not reset to 45 Bd / 170
Hz,
but are set to last values used in this mode.
V2.81
Right mouse button click (or left mouse button with "Shift" key pressed)
make
TrueTTY to do fast decoding of one-minute prehistory of signal at selected
frequency.
By "Replay" button one-minute prehistory of current signal is fast decoded
now.
V2.79
DTMF-decoder was improved.
V2.78
PTT-interface settings were rewritten.
Now PTT can be controlled via:
- COM-port;
- standard LPT-port;
- LPT-port with non-standard addresses (PCI-cards etc.);
- via OmniRig by COM-port control signal pins;
- via OmiRig by CAT-commands;
- via WinKey.
An option "Setup/Tuning/Wheel tuning speed" was made.
A bug with "`[pa]" macros was fixed.
Callsigns and numbers recognition was improved in the "Catch word in contest
mode".
V2.76
QPSK-63 mode receiving and transmitting were made.
V2.75
Option "Use mouse wheel for tuning" was made.
A bug was fixed - "Help/Contents" menu didn't work in V2.70.
V2.70
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
Command line parameter /F can define configuration file name now.
/S parameter of command line is not used now.
V2.60
BPSK-125 mode receiving and transmitting were made.
TrueTTY can cooperate with another software as COM-server
(ActiveX object) now.
V2.57

Invisible buffer is not used now. Receiving window contains
all received symbols until it is manually cleared.
Beacon regulator defines not period, but pause between transmissions now.
V2.56
Minor improvements of RX window text displaying were made.
New options were made:
"Setup / Other / Do not strip received NIL symbols from capture file
and exchange channels";
"Setup / Other / Put time marks to a capture file";
"Setup / MOX & Beacon / Beacon off if my callsign ... is received";
"Setup / MOX & Beacon / Beacon off if any callsign is received twice";
Some options were moved from the "Setup->Interface" page to
the "Setup->MOX & Beacon".
V2.55
Documentation was updated.
W1GEE PTT-interface is supported in LPT/N6TR mode now.

The problem is - what do you understand so far about how CWType works?
Do you understand that you are asking how to build or find a piece of hardware - not software. CWType is the software and uses a hardware interface to key the rig.

At this URL: http://f5rrs.pagesperso-orange.fr/eq_cwtype-interface.html

You will see very simple circuit with 5 parts you can find cheap at R. Shack. I build mine inside the Serial plug itself.

The link also shows a picture of of a finished product.

Here is a link where you can buy it - or could buy it (haven't check if it is still available): http://www.hosenose.com/store/productgrid.aspx?primarycatid=47

Over the years CWType has evolved and as I use the original basic "hardware" interface, I haven't bothered to keep up with CWType's evolution to interfacing with winkey etc.

I just know the above works and can be made for probably under $10 in parts. Or you can buy a ready made version at the link above for $25.

In short - CWType sends a "pulse" out the computer serial port. Somewhere between that port and your rig, you have circuit that using a switching transistor to turn that pulse into what looks like a straight key on/off to the rig. The circuit needs about five parts- two resistor, two diodes and a transistor. It is just as if you had a cable with the appropriate plug for a straight key if you were using a straight key with your rig - the rigs I've had use a 1/8 stereo plug with the ring not used and a menu setting that tells the rig to "look" for a straight key instead of a paddle.

If you are asking how to use CWType to send modulated CW to the rig - maybe it does that now, maybe not. The above is how it originally worked and still does - very well.

It dovetails nicely with the companion CWGet, though its a whole other forum to discuss the merits of Rig CW to computer soundcard to software app CW translation.

73,
Paul, k7nhb

CwType is free, just install it.

Install CwGet and copy/paste reg-code.

Surely, you MUST have backup copy of message with reg-code.

If you lost this message, copy/paste text from CWGET.INI file as reg-code.

This file must have [regdata] section...

5433. Can I use CWGET and CWTYPE directly with a USB connection?

Yahoo group: dxsoft
Date: 2013-01-30 08:53:30 UTC
From: Paul
Topic: 5433 Message: 5433

I've been using CWGET, CWTYPE and other software on my home PC that has plenty of COM Ports because I could add a serial card. But that is not possible with a small laptop or NetBook. I'm about to get a KX3 that uses a USB cable from Rig to PC.

Will CWGET and CWTYPE work directly with a USB connection?

If not, I imagine I'd have to use the optional Elecraft rig to serial cable, then plug that into a KeySpan Serial to USB dongle and use the KeySpan software to make a virtual COM Port out of that USB connection.

If Elecraft had their own virtual COM software for their USB cable, I wouldn't have to use the KeySpan, but they haven't gotten back to me on that.

I'm just trying to get a sense ahead of time of what it will take to run the KX3 portable with a small laptop/netbook that just has USB ports.

Thank you and 73,
Paul

There are not such things as "direct USB connection".

It depends on which _device_ is at another end of USB-cable.

It can be USB-soundcard, USB-COM converter ...

External program can work with files created by SeaTTY,
like NavtMsgs software does it to decode SYNOP messages:

http://home.planet.nl/~hagem358/Navt_GB.htm

5443. SeaTTY V2.37 is released

Yahoo group: dxsoft
Date: 2013-03-13 09:29:40 UTC
From: Sergei Podstrigailo
Topic: 5443 Message: 5443

Hello All,

I just have uploaded SeaTTY 2.37 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

--
Best regards,
Sergei

==========
SeaTTY versions history

V2.37
A command "File / Stop Decoding From File" was made.
A button "FastD" (fast decoding from file) was made.
V2.36
1000 Hz deviation is supported in HF-FAX mode now.
Minor bug with working frequency saving (if AFC is switched on) is fixed.
V2.35
Maximum number of RTTY/NAVTEX Station ID filter items is increased to 32.
Filter for GMDSS DSC message format was made.
Some minor improvements were made.
V2.31
The "Setup / Other / Start SAME message by 1050 Hz tone" option was made.
V2.30
More settings for spectrogram and oscillogram colors were made.
V2.21
Options for tuning auto start / auto stop parameters of FAX mode were made.
See "Setup/FAX" page.
V2.20
Message filename shows time of message start, not time of message end now.
The "Setup / Other / EOM timeout in SAME" option was made.
A bug was fixed - a message with station ID in filename couldn't be really deleted by
"Delete" command.
"Auto start" and "Auto stop" procedures were slightly optimized in HF-FAX mode.
V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.
V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.
V1.80

GMDSS DSC (HF and VHF) messages decoding was made.
[...]

Sergei,

Is it possible to change the mark and space frequencies in TrueTTY when in the UHFAX25 mode?
I notice in the waterfall that the bubbles are off from the sliders. When I shift one slider the other slider moves with it.
I haven't studied the help files much but can I use TrueTTY as a digipeater or I-Gate or something else?
Thanks for some great software.

Playing Dumb Today,

Joseph Shynn

You can change frequencies, but not shift...
Shift is always 1000 Hz in this mode.

Check "Real ... sampling rate" settings to fix
soundcard sampling rate error.

q> I haven't studied the help files much but can I use TrueTTY as a
q> digipeater or I-Gate or something else?

TrueTTY works as KISS-TNC in this mode,
you need another software for upper level.

Read help-file to know how :-)

Yahoo group: dxsoft
Date: 2013-03-13 17:35:16 UTC
From: Mats Höwing
Topic: 5443 Message: 5449

A very reasonable sum. I've used this software for 6-7 years now for NAVTEX and weatherfax receptions on my yacht.. Best software available!
Maybe I should pay again... :)

/Mats, Sweden

5450. Question on macro sequence in CWtype

Yahoo group: dxsoft
Date: 2013-03-23 14:50:54 UTC
From: Wim
Topic: 5443 Message: 5450

In CWtype together with some other macros I created a macro sequence under one of the function keys, confirming a qso and saving it(~[lgs]) into AAlog and clearing the edit fields (~[ce]). After running this sequence the cursor ends up in the Sent symbols window. Is there a way to force the cursor to the CALL window in this macro sequence? So you can enter the next call when handling a pile-up. (I know I can force by hand using ALT-C keystroke). I am not using CW get, just CWtype and AAlog.

73 Wim pa0wrs

You don't need to use edit fields of CwType if you use AALog / AATest.

Just use ~[j...] macros for AALog input fields and
~[i...] for AATest fields.

--
Best regards,
Sergei

==========
=== TrueTTY/CwType + AALog/AATest macros mini-FAQ start ===

~[iCall] correspondent callsign
~[iRprtSent] sent RST
~[isRprtSent] sent RST with CW substitutions (9/N , 0/T ...)
~[iRprtRcvd] received RST
~[isRprtRcvd] received RST with CW substitutions
~[iName]
~[iQTH]
~[iNumberSent] sent control number
~[isNumberSent] sent control number with CW substitutions
~[iNumberRcvd] received control number
~[isNumberRcvd] received control number with CW substitutions
~[iOldCall] previous QSO correspondent callsign
~[iOldRprtSent] previous QSO sent RST
~[isOldRprtSent] previous QSO sent RST with CW substitutions
~[iOldNumberSent] previous QSO sent control number
~[isOldNumberSent] previous QSO sent control number with CW substitutions
~[iVarNumberSent] variable part of sending control number
~[isVarNumberSent] variable part of sending control number with CW substitutions
~[imCall] correspondent callsign, if it was edited after control number macros
transmitting,
or empty text in another case. It works in AATest in CQ mode. Control number macros
is defined in "Config / Autosend setup /CQ mode /Answer macros" AATest settings.

`[iC1] The first correspondent callsignd symbol
`[iC2] 2-nd
`[iC3] 3-rd
`[iC4] 4-th
`[iC5] 5-th
`[iC6] 6-th and other symbols of callsign

In CW mode (AATest + CwType)
good method is represent correspondent callsign as
`[iC1]`[iC2]`[iC3]`[iC4]`[iC5]`[iC6]
In this case you can start transmission before full callsign is entered,
then continue to type rest of callsign.

In contests you need switch on MOX mode in TrueTTY/CwType,
at least "TX at keyboard press", to avoid problem with entering
two macros ending by `[rx].

New macros to save sound to a wave file (and replay) by TrueTTY or CwType+CwGet:

~[rpNN] - replay last NN seconds;
~[svNN] - save last NN seconds to wave-file;
~[svpNN] - save last NN seconds to wave-file and replay.

5453. Starting over

Yahoo group: dxsoft
Date: 2013-03-28 03:35:59 UTC
From: n8jql
Topic: 5453 Message: 5453

Dave

The last versions I have for Commander is 989 and for Dxkeeper is 1041. That was last summer. Then I went QRT until now and converted to Windows/7. Apparently, I've lost the install of that version of DxLab and the files have remained unused till now. I imagine you've moved on quite a bit from that point. Now I want to get "back in the shack", fire up my rig and get Dxlab up and running again.

Question is, shall I try to reinstall or re download and install? I have very little in the old database: just my log of past QSOs and whatever I need to support what I've done with eQSL and LotW. I'm leaning towards doing the re-install and then copying relevant database files into the new install. That takes care of my big volume stuff; anything else (preferences, etc.) I can reenter into the new install.

Before doing this I'd like to enlist your support in my procedure. What is the best approach/procedure for me, given the few things I wish to recover from the old install directories?

Thanks,
Jim

5455. LotW AALog Process?

Yahoo group: dxsoft
Date: 2013-04-03 14:05:10 UTC
From: hjohnc1999
Topic: 5455 Message: 5455

To All -

I am trying out AALog and have a question.

I could not find in the help file any information on how to upload and download to and from LotW.

Is there an easy way to do this?

Do I have to manually create the LotW ADIF upload?

Does the ADIF download from LotW modify the existing QSOs confirmations or create new QSOs?

Will the upload ADIF ignore QSOs that were previously uploaded to LotW?

When you download from LotW is there a report that shows any QSLs that are new credits for DXCC?

Any assistance is appreciated.

Hello John.

To upload data to LoTW you need to export contacts into adif and use LoTW standart upload method. Then you can set status "LoTW uploaded" for this contacts. You can upload any part of you log using filters feature of AALog. To download data from LoTW go to File | Import menu and select LoTW confirmation. Here you can select file (if you manually download confirmations) or AALog can download data from server for you. AALog has special field for LoTW confirmation and loaded file will update data in existed contacts. BTW you can import LoTW report as simple ADIF file (Files | Import | From ADIF) and they will add into the log.
No feature for display new confirmation yet.

Alexander -

Thank you for the help. I will do that for LotW.

The only other thing I need help with at this time is the Spot List
filters. I click on "Edit Filters..." but nothing happens and I can't
set any filters.

Thanks again for your help.

Are you BBLog developer?

If yes, see http://www.dxsoft.com/dxs-exch.zip for details.

If not, ask BBLog author about it...

Topic: 5463 Message: 5464

Hello

Look for file AATest_EN.doc in the AATest folder.

This is part of this file:

I.5. AAVoice, CwType and TrueTTY interfaces
To use these programs together with AATest you need to configure macros
program. It is strongly recommended to use a MOX feature of the CwType
during contests.
Here is a part of the CwType.ini file with an example of macros for CQ WW
WPX contest:
Macro0="~[cl]`[rx]"
Macro1="~[tx]test rz4ag rz4ag`[rx]"
Macro2="~[tx]de RZ4AG`[rx] "
Macro3="~[tx]tu 5nn ~[isNumberSent]`[rx]"
Macro4="~[tx]~[iCall] tu 5nn ~[isNumberSent]`[rx]"
Macro5="~[tx]~[imCall] tu RZ4AG test`[rx]"
Macro6="~[tx]QRZ? de RZ4AG`[rx]"
Macro7="~[tx]AGN`[rx]"
Macro8="~[tx]~[iCall]? agn`[rx]"
Macro9="~[tx]~[iCall] sri qso b4`[rx]"
Macro10="~[tx]?`[rx]"
Macro11="~[tx]~[iOldCall] ~[isOldNumberSent] ~[isOldNumberSent]`[rx]"
Detailed descriptions of the macros could be found in programs? manuals.
All values of the ~[i<value>] macros could be found in the Section IV.

Run every of these programs "As administrator" (by right mouse button menu) at once
to let them create registry records...

5473. Query on docs

Yahoo group: dxsoft
Date: 2013-05-19 14:55:33 UTC
From: Frederick R. Vobbe
Topic: 5473 Message: 5473

I'm a new user to TruTTY. I also use cwType/cwGet.

I'm having a bit of difficulty understanding how to set up the macros. I've read a few web pages, such as http://www.qsl.net/wm2u/truetty.html. I still have questions on how to set up my program correctly. Is there any good pages which would explain it better, or would someone share how their screen looks?

Sort of off topic, but I have a Yaesu FT857D. I notice that nearby signals will cause havoc even when I have the rigs filters set pretty tight. I was thinking of getting the YF-122S SSB filter, (Collins 2.3 kHz), but was told the InRad 720F (2000 Hz 455 kHz SSB 8-pole Collins filter), is significantly better for digital mode. Does anyone have any opinions either way about how to narrow up the receive better?

Fred

For digital mode I prefer narrow filter such as the 300 or 500 HZ filter. The reason is that signals which are strong and near the operating frequency will cause AGC pumping and it will reduce the amplitude of the signal that you are trying to receive.

If you have adjustable filters (DSP filtering) in the radio, then I think that the DSP will be in the Audio section of the FT-857 radio and not the IF section.

To avoid the problem that you are describing, you need a narrow filter in the IF. 455 KHz. That is where the INRAD or W4RT filters for 300 or 500 Hz will help. Please get a second opinion, however.

I have the FT-897D which is essentially the same radio. Just larger.

Best Regards
Dan Schaaf

Thanks for the info, Dan. I'll see if I can narrow the filters on the radio, and if no, look into the optional filter.

I've got menu #047 (LPF Cutoff) set to 1800hz. That seems to help. But when there is a station coming in on 14070.21, and ones at .18, .24, etc, it makes copy rough.

I'm planning on getting the 897 for home, and putting my 857D in the truck for mobile. Both are super rigs.

BTW, did you use the CAT/data interface between the computer and the radio, or go with an external hookup?

Fred

5476. navtmsg hoster down...need install package to run with seatty

Yahoo group: dxsoft
Date: 2013-05-24 13:25:40 UTC
From: timo_x5233
Topic: 5476 Message: 5476

I bought and ran seatty since a while, also in combination with
navtmsg.

Now i needed to reinstall everything, for that i require the navtmsg
install package - but the website for that software is down.

My question is the following:
- If any of you have the installer package/exe still somewhere
can you somehow help me to obtain it?

(i do run own servers, i could even host it... i have made that offer to the owner by
email, but did not get a response ..(yet))

From: gary_w7do
Topic: 5477 Message: 5477

I can't seem to get my Ham Call CD to work with my AAlog Version 3.1 Build # 2.1.0.1157. I use C:\Program Files (x86) \ ham0 in the external database block for Buckmaster CD-ROM to point at it. Moving the data base to other levels does not seem to help. I'm I missing something??

This is Windows 7, that I am using. Did anyone get theirs to work? with Windows 7??

Hello

1. Set path to hamcall.dat location and set checkbox to use this database

2. Set "Auto search in attached callbooks" checkbox in the Config|Option
menu

Ham call data base refuses to work.

QRZ data base works.

The version is 2013.5, Dated May 2013.

The Ham Call program works by-itself or in its stand-alone application just fine.

Hello

With help of Gary (W7DO) problem is solved.
Hamcall changed interface to there database. Need delete old hamcall32.dll
from AALog folder (if you have installed hamcall application) or just copy
new file from CD into AALog folder (if not).

Dear Frederick,

I am glad that you raised this here - I asked a similar question a couple of months ago. Despite some direct correspondence with Alex, I never really got a practical answer on how to write macros. Specifically I am still not sure whether they are written as edits to existing files in the win.ini files or whether they have to be edited actually in the macro window, which is very tedious to do and doesn't always work. It especially doesn't seem to work between different programs in the suite. A clear and unambiguous step-by-step instruction on where and how to edit macros would be a great addition to the manual for these, otherwise excellent, programs!!

What does anyone else think?
Best wishes,

Chris Morrison, HB9HFB

Guys

I have MACRO written and I can email direct to you my MACROS by list and by JPG. Then you can analyze them and compare them with the MACRO list available by Alex in the software. That may be a good starting point in understanding.

Email me direct at dan-schaaf at att dot net

This sounds like a good project for someone who understands the macros and how to properly format them in the program. Hopefully, someone can come up with a web page with better descriptions and examples.

As a new user of this mode and software, I'm very frustrated by the lack of information. Since I have the software I'm committed. But if another ham asks about TrueTTY I'm probably going to tell them to look elsewhere.

If someone does this, please make the examples in standard html and not a graphic. I know it looks nicer to show a menu, but for new users having text they can highlight, copy, and edit works much better. Blind hams are often excluded when examples are only in images.

Fred/W8HDU

Dear Frederick,

I am glad that you raised this here - I asked a similar question a couple of months ago. Despite some direct correspondence with Alex, I never really got a practical answer on how to write macros. Specifically I am still not sure whether they are written as edits to existing files in the win.ini files or whether they have to be edited actually in the macro window, which is very tedious to do and doesn't always work. It especially doesn't seem to work between different programs in the suite. A clear and unambiguous step-by-step instruction on where and how to edit macros would be a great addition to the manual for these, otherwise excellent, programs!!

What does anyone else think?
Best wishes,

Chris Morrison, HB9HFB

From: Frederick R. Vobbe
Topic: 5483 Message: 5488

It would be nice to have a list of all the available (usable) macros within the program, and how they should be used. For example, this is how I have my CQ set up. I don't know if it's right as I've yet to make a contact using it. I'm only on contact #2 in PSK31. This is what I have for Macro 1:

~[cl] ~[tx] cq cq cq de ~[m4] ~[m4] ~[m4] cq cq cq de ~[m4] ~[m4] ~[m4] cq cq cq de ~[m4] ~[m4] ~[m4] pse k `[rx] ~[lf]

Macro 4 contains only "W8HDU" without the quotes.

My reply to a call for CQ is Macro 2, and it reads:

~[tx]~[ec] de ~[m4] ~[m4] ~[m4] pls k ~[lf]

My signal report is Macro 3, and it reads:

~[tx]~[ec] de ~[m4] ~[m4]. You are ~[er] into Lima, Ohio. Lima, Ohio. Grid: EN70. How copy? pls k ~[lf]

And my last one is Macro 5, which is used as a sign-off:

~[tx]~[ec] de ~[m4] ... Thanks for the contact. I'm good in Callbook, QRZ. Pls QSL direct or by eQSL. ~[ec] de ~[m4] 73 & best of DX. ~[m4] CUL sk ~[cl] ~[lf]

From the docs I've found this seems to be the norm for most contacts.

One question I have is the ~[rx] command, which only seems to work about half the time. I'm not sure if that's a bug, or an undocumented feature when combined with other macros. What would want the macro to do is turn on the transmitter with the ~[tx] and then run the rest of the macro and then go to receive. For some reason I have to leave the ~[rx] out, and then just click on the TX icon at the top to shut off the transmitter. I would be good to get some clarification on this.

Fred/W8HDU

Hello Alex,

Thanks for coming back. I only commented because I saw immediately that Frederick had exactly the same problem as I did.
OK - here's the issue:

1.I recently purchased a suite of different programs from DXSoft - AALog3, CWType and TrueTTY

2. I would like to be able to use just one set of macros for all of them given that these programs 'talk' to each other.

3. The instructions for the individual programs have listed in some detail the various symbols and commands used in the macros (I have no problem with these) but it is not clear where this should be done. There is reference here and there in the instructions to the 'Win.ini' file but this is not very useful information. Do I need to go into and edit the Win.ini file?? Not sure. Better would be a set of simple step-by-step instructions on where to go to set up macros and how to construct and save them so that they work across the suite of programs. It may sound like simple stuff to you but you are a person used to writing software - some of us are radio amateurs from a more 'ordinary' background who would love to use the programs but get frustrated when some knowledge that we don't have is obviously assumed!

The macros which I would use are all the obvious ones already covered in your list - I just need to know how to edit them to fit my own callsign, station, QTH, etc but most importantly where to do this so that they work across all the DXSoft suite of programs. Step by step instruction would be great!!

Many thanks for any help you can provide here.

Best regards,

Chris HB9HFB

Hello Frederick,

Sunday, June 2, 2013, 12:48:48 AM, you wrote:

FRV> One question I have is the ~[rx] command, which only seems to work about
FRV> half the time.

You just need to understand difference between ~[...] and `[...] macros.

~[...] macros expanded _before_ _placing_ them into TX buffer.
`[...] macros expanded just before "sending".

So in most cases your need to use `[rx] macro, not ~[rx].

FRV> As a new user of this mode and software, I'm very frustrated by the lack of
FRV> information.

I'd suggest read help-file completely at first...

All macroses are described there.

There is some additional info:

=== TrueTTY/CwType + AALog/AATest macros mini-FAQ start ===

~[iCall] correspondent callsign
~[iRprtSent] sent RST
~[isRprtSent] sent RST with CW substitutions (9/N , 0/T ...)
~[iRprtRcvd] received RST
~[isRprtRcvd] received RST with CW substitutions
~[iName]
~[iQTH]
~[iNumberSent] sent control number
~[isNumberSent] sent control number with CW substitutions
~[iNumberRcvd] received control number
~[isNumberRcvd] received control number with CW substitutions
~[iOldCall] previous QSO correspondent callsign
~[iOldRprtSent] previous QSO sent RST
~[isOldRprtSent] previous QSO sent RST with CW substitutions
~[iOldNumberSent] previous QSO sent control number
~[isOldNumberSent] previous QSO sent control number with CW substitutions
~[iVarNumberSent] variable part of sending control number
~[isVarNumberSent] variable part of sending control number with CW substitutions
~[imCall] correspondent callsign, if it was edited after control number macros
transmitting,
or empty text in another case. It works in AATest in CQ mode. Control number macros
is defined in "Config / Autosend setup /CQ mode /Answer macros" AATest settings.

`[iC1] The first correspondent callsignd symbol
`[iC2] 2-nd
`[iC3] 3-rd
`[iC4] 4-th
`[iC5] 5-th
`[iC6] 6-th and other symbols of callsign

In CW mode (AATest + CwType)
good method is represent correspondent callsign as

`[iC1]`[iC2]`[iC3]`[iC4]`[iC5]`[iC6]
In this case you can start transmission before full callsign is entered,
then continue to type rest of callsign.

In contests you need switch on MOX mode in TrueTTY/CwType,
at least "TX at keyboard press", to avoid problem with entering
two macros ending by `[rx].

New macros to save sound to a wave file (and replay) by TrueTTY or CwType+CwGet:

~[rpNN] - replay last NN seconds;
~[svNN] - save last NN seconds to wave-file;
~[svpNN] - save last NN seconds to wave-file and replay.

With AALog use ~[j...] macros in place of ~[i...] (which are used with AATest).

Hi Guys,

Forgot to mention that I often have the same problem as Frederick, namely sometimes the RX turns back on, sometimes not, no pattern to this. Sometimes only half the macro is sent. Dan, I would be very pleased to see your macros which work - you offered to send them by email. I'm writing to you directly now. Tnx!!,

CWGet just works, there is nothing that requires MACROS.
CWType and TrueTTY use MACROS. I have sent my CWType.ini file to 3 people who have inquired about this. They can copy my ini file into their PC after saving their original ini file on their desktop. Then they can simple edit my ini file while CWType is running to change from my call sign to theirs and change any other pertinent info. Just use mine as a template if you will.

If nothing else, it will assist in the learning process.

Yes, I "need" to understand it, and I look to you for an answer. Explain what you mean by "expanded", Sergei. It's not clear to me the intent of the command nor your logic in the command construction.

> I'd suggest read help-file completely at first...
> All macroses are described there.
> There is some additional info:

I have. But it's not clear to me the differences in the construction of the macro. A list of mini-FAQ commands does not help, especially when you imply that there is an order to the commands which the user must maintain. The FAQ does not explain this well.

Best regards and DX
Fred

Hopefully Sergei can explain hierarchy of command structure better.

I suspect this is the same problem I had with a repeater controller where a function would not work unless the commands, (which were just listed in an FAQ), were placed in a certain order. The coder for the repeater controller knew that a certain command had to precede another, but it was not documented anywhere in the document. Once this was clearly known to all of us that had the controller, the issue was moot. Minor error on the part of doc writing, but when discovered it was clearly re-documented and nobody had a problem since.

Topic: 5483 Message: 5497

Understood, and that was my error by bringing CWGet into the conversation.

I have used yours as a template, but your operation and mine seem to be different. It appears you're using some macros (#4) in one string of transmission where you are adding a second macro into the transmission, or typing live. And most of your macros appear to me to be one quick transmission, such as macro #2. That appears you're sending QRP and nothing else. I would assume that this would be part of a string of transmission such as "FB Fred I'm operating (macro #2)" at which point your transmitter turns off. I would expect a K or KN to be before an end of transmission.

Again, it works for you, and you know what your marcros do by your form of operation. But to someone new it's confusing when to use certain commands, and what the intent is. This is where the misunderstand is stemming from.

FWIW, here is what I did last night….

Macro1="~[tx] CQ CQ CQ DE ~[m4] ~[m4] ~[m4] CQ CQ CQ DE ~[m4] ~[m4] ~[m4] pse k ~[rx]"

I'm expecting the transmitter to turn on, send this string of text, then go to receive.

Macro2="~[tx] QRZ QRZ de ~[m4] ~[m4] '(' ~[rx]"

Same as macro 1. Turn transmitter, send text, and turn off.

Macro3="~[tx] ~[ec] de ~[m4] FB ~[en] ~[eo] ur ~[er] ~[er] into western Ohio. How copy? '('
"

Same as macro 1, (leaving off call sign exchange).

Macro4="~[tx]W8HDU"

Macro5="~[tx] ~[ec] de ~[m4] "

Turn on transmitter, send call sign exchange, but don't go to receive as I'll type or send other macros to follow.

Macro6="~[tx] Rig FT857, Antenna TTFD, Power 10 watts. "

Turn on transmitter (if not on), send string, and don't go to receive

Macro7="~[tx] Name Fred Fred. QTH Lima Ohio Lima Ohio. EN70 EN70. Allen County Allen County. "

Turn on transmitter (if not on), send string, and don't go to receive

Macro8="~[tx] Gud in Callbook or QRZ website. QSL direct or eQSL. "

Turn on transmitter (if not on), send string, and don't go to receive

Macro9="~[tx] NAME Fred Fred. QTH Lima Ohio '&' Lima Ohio. ~[rx]"

Turn on transmitter (if not on), send string, and go to receive after sending. I use this for one net.

Macro10="~[tx] ~[ec] de ~[m4] '(' ~[rx]"

Turn on transmitter (if not on), send string, turn over to the other ham, go to receive.

Macro11="~[tx] ~[ec] de ~[m4] tnx for QSO. 73 and gud DX. ~[m4] '$' ~[rx]"

Turn on transmitter (if not on), send string, sign with the other ham, go to receive.

Macro12="~[cl]"

Clear the screen.

Fred

FRV> Yes, I "need" to understand it, and I look to you for an answer. Explain
FRV> what you mean by "expanded", Sergei.

I mean "macro is replaced by resulting text or given command is executed".

For examle, if F1 macro string is "~[tx] CQ de XX0XX pse k ~[rx]",

it works "wrong" - after F1 pressing TX is switcning ON, then it immediately is switched OFF and text
" CQ de XX0XX pse k " is placed into input window.

If F1 macro string is "~[tx] CQ de XX0XX pse k `[rx]" , that
after F1 pressing TX is switcning ON and text
" CQ de XX0XX pse k `[rx]" is placed into input window.

So `[rx] macro will be executed (and TX will be off) when all text before it
will be transmitted.

Topic: 5483 Message: 5499

Fred and all,

In the case of the QRP macro, I do not use softkeys like F2 F3 etc. That is because I cannot type well, so I use mouse on the buttons that result from macro command. Example, Sometimes I want to send ONLY the word QRP, so I have a button set up to send only QRP.

I click the buttons according to what I need to send. The QRP button macro is : ~[tx] QRP `[rx]

Maybe what I am doing is not macros but just text strings to accomplish what I want to do. But the text string could be considered to be a macro of a sort since it is all under a button façade.

Best Regards
Dan Schaaf

Subject: RE: [dxsoft] Re: Macros

Understood, and that was my error by bringing CWGet into the conversation.

I have used yours as a template, but your operation and mine seem to be different. It appears you're using some macros (#4) in one string of transmission where you are adding a second macro into the transmission, or typing live. And most of your macros appear to me to be one quick transmission, such as macro #2. That appears you're sending QRP and nothing else. I would assume that this would be part of a string of transmission such as "FB Fred I'm operating (macro #2)" at which point your transmitter turns off. I would expect a K or KN to be before an end of transmission.

Again, it works for you, and you know what your marcros do by your form of operation. But to someone new it's confusing when to use certain commands, and what the intent is. This is where the misunderstand is stemming from.

FWIW, here is what I did last night….

Macro1="~[tx] CQ CQ CQ DE ~[m4] ~[m4] ~[m4] CQ CQ CQ DE ~[m4] ~[m4] ~[m4] pse k ~[rx]"

I’m expecting the transmitter to turn on, send this string of text, then go to receive.

Macro2="~[tx] QRZ QRZ de ~[m4] ~[m4] '(' ~[rx]"

Same as macro 1. Turn transmitter, send text, and turn off.

Macro3="~[tx] ~[ec] de ~[m4] FB ~[en] ~[eo] ur ~[er] ~[er] into western Ohio. How copy? '('
"

Same as macro 1, (leaving off call sign exchange).

Macro4="~[tx]W8HDU"

Macro5="~[tx] ~[ec] de ~[m4] "

Turn on transmitter, send call sign exchange, but don’t go to receive as I’ll type or send other macros to follow.

Macro6="~[tx] Rig FT857, Antenna TTFD, Power 10 watts. "

Turn on transmitter (if not on), send string, and don’t go to receive

Macro7="~[tx] Name Fred Fred. QTH Lima Ohio Lima Ohio. EN70 EN70. Allen County Allen County. "

Turn on transmitter (if not on), send string, and don’t go to receive

Macro8="~[tx] Gud in Callbook or QRZ website. QSL direct or eQSL. "

Turn on transmitter (if not on), send string, and don’t go to receive

Macro9="~[tx] NAME Fred Fred. QTH Lima Ohio '&' Lima Ohio. ~[rx]"

Turn on transmitter (if not on), send string, and go to receive after sending. I use this for one net.

Macro10="~[tx] ~[ec] de ~[m4] '(' ~[rx]"

Turn on transmitter (if not on), send string, turn over to the other ham, go to receive.

Macro11="~[tx] ~[ec] de ~[m4] tnx for QSO. 73 and gud DX. ~[m4] '$' ~[rx]"

Turn on transmitter (if not on), send string, sign with the other ham, go to receive.

Macro12="~[cl]"

Clear the screen.

Fred

From: Dan Schaaf

CWGet just works, there is nothing that requires MACROS.
CWType and TrueTTY use MACROS. I have sent my CWType.ini file to 3 people who have inquired about this. They can copy my ini file into their PC after saving their original ini file on their desktop. Then they can simple edit my ini file while CWType is running to change from my call sign to theirs and change any other pertinent info. Just use mine as a template if

you will.

If nothing else, it will assist in the learning process.

Best Regards
Dan Schaaf

From: Frederick R. Vobbe
Topic: 5483 Message: 5500

OK. This make more sense.

The ~[rx] at the end will execute an off command as soon as the ~[tx] command is completed.

But if `[rx] the command to go to receive is not issued until the complete string is sent.

In the following line;

"~[tx] ~[ec] de ~[m4] tnx for QSO. 73 and gud DX. ~[m4] SK SK ~[lf] `[rx]"

Should the line feed be changed to a `[lf] so it does not execute until the line has sent? I'm unsure if you planned for the line feed to be sent prior to transmission, or after transmission.

Fred

>>
>> So in most cases your need to use `[rx] macro, not ~[rx].

FRV> Yes, I "need" to understand it, and I look to you for an answer.
FRV> Explain what you mean by "expanded", Sergei.

I mean "macro is replaced by resulting text or given command is executed".

For examle, if F1 macro string is "~[tx] CQ de XX0XX pse k ~[rx]",

it works "wrong" - after F1 pressing TX is switcning ON, then it immediately is switched OFF and text " CQ de XX0XX pse k " is placed into input window.

If F1 macro string is "~[tx] CQ de XX0XX pse k `[rx]" , that after F1 pressing TX is switcning ON and text " CQ de XX0XX pse k `[rx]" is placed into input window.

So `[rx] macro will be executed (and TX will be off) when all text before it
will be transmitted.

No, it is not needed.

FRV> I'm unsure if you planned for the line feed to be sent prior
FRV> to transmission, or after transmission.

~[lf] will just be replaced by linefeed symbols (CR LF) in the same place of text.
Then all expanded text will be placed into input window.

5502. AALog Problems

Yahoo group: dxsoft
Date: 2013-06-11 21:07:27 UTC
From: edguzis
Topic: 5502 Message: 5502

I am using an unregistered (as of now) AALog ver 3.1, Build 3.1.0.1157 installed on a Windows 8 computer. I have two problems:
1. When I exit the program I receive an error message stating "Access violation at address 77083EA0 in module ntdll.dll. Write of address 00000014."
2. I cannot EXPORT an ADIF file. I chose ALL CONTACTS and selected the following fields: CALLSIGN, DATE, FREQ, MODE, QSO START TIME, RST SENT. When I click on the EXPORT button all that happens is the SELECT FIELDS dialogue box comes up again - can't get past this. No file is exported.

How can I fix these two problems without loosing any data?

Thanks in advance,

Ed, W9TW

5503. ts-590 transmit

Are you running VOX? On my TS-570, I key the transmitter through a 2N2222 transistor across the CW straight key and turn the VOX on. It acts just like quick break-in CW. I use the diagram that comes in the Help section of CW-Type. You can use the PTT section if you want to without the VOX but I prefer it to function as close to keyed CW as it can be.

My rigs start TX as soon as I push the key. Doesn't the kenwood do that. Are you saying you have to explicitly push a TX button then key the rig?

If it TX's when you push the key or paddle, then just click the TX button on CWType; it will start sending your text like a straight key.

If the Kenwood needs a command, then you might need a second com port or usb to com as the TX command would be sent down that channel.

The TS-590 is similar to the TS-570 that I use. Set the TS-590 up for CW Break-in, ie, key the transmitter with a straight key or paddle keyer with the VOX turned on. You can try this while connected to a dummy load. Every time you press the key, the transmitter will transmit and you can hear the receiver when the transmitter is unkeyed. Construct one of the simple interfaces like is shown in the CW-Type Help Section. Connect it to your computer SERIAL or PARALLEL port and across the straight key contacts. If your computer doesn't have any ports other than USB, buy a USB to SERIAL adapter and connect the interface to the adapter. You can leave the adapter connected to the transmitter while using other sound card programs and return to the CW program at will. Keep the leads short and use ferrite beads on the adapter leads to eliminate RF feedback from getting back into the transmitter. I would be happy to send you a picture of my adapter if that would help.

Roger, W9NCQ

hi to all my name is peter Spiessberger I live in Helensburgh Australia I just purchased Yaesu FRG-7 now i an only new to this but have always been interested in weather and shortwave .
I only just recently found out about recieving weather faxes vis shortwave reciever and a computer I have downloaded Seatty and have set up a laptop and have connected from the MIC input on the laptop and have connected inline with the speaker on the radio the reason I did it this way was if in used the head phone jack on the radio I could not hear anything it was silent (maybe doing something wrong here)I get a signal reading on Seatty with this set up but when I open up the HD fax to recieve a weather fax it looks like it is trying to recieve somthing but it is unreadable I am tuned in to WMC Wiluna .
any help would be greatly appreciated
many thanks
Peter

Dear Peter,

1) Connect a headphone output or output for the tape from your FRG 7
to microphone input of your laptop.

2) Open Seatty and go to □setup□ window menu□ and check that your audio
device are been choosed. (It□s very important)

3) Go to □mode□ window menu and select HF-FAX. (It□s very important)

4) Now you□ii able to heard audio signal and see the fax map.

It is very easy, belive me.

To _hear_ receiving signal, check and send _Playback_ options of Windows soundcard mixer.

To let SeaTTY decode signal (and to see signal peaks at spectrogram)
check and send _Recording_ options of Windows soundcard mixer.

Windows mixer is opened by "Volume" icon in Windows tray.

hi Sergei and Riccardo
thank you so very much for your helpfull advice I now have the sound card issue sorted out I have the cable plugged into the headphone jack on the frg-7 and into the Mic Jack on the laptop I now can hear the sound of the radio signsl threw my laptop .
I am getting a fairly good signal from WMC and it will auot start reciveing fax sometimes when it does the image is still not readable as a map I can see lines but they are all broken lines an all squashed up or distorted I have tried fine tuning but this does not help one thing I do have the laptop sitting on top of the reciever could this be a problem ??
any advice as to what I am doing wrong would be greatly appreciated
kindest regards
pete

Do you signal peaks at spectrogram and vertical red lines point to these peaks?

If yes, do "slant correction" along these almost horizontal lines
to correct soundcard sampling rate error (see help-file for details).

You also can send me a sample wave-file created by "File/Open wave capture file"
command, I'll check it.

Send it to my personal e-mail, please...

>hi there Sergei and Riccardo
with your advice on the slant adjustment it is now working I am Reciving fairly good images
it is the middle of the day here where i live and the signal is not very strong it is a lot
better at night so I will see how it all looks with a better signal once again thank you
for you patience and help this is a fantastic program I love it
many thanks and kind regards
pete

John,

Check your Setup tab for the Input soundcard number and the Output soundcard number. Sometimes Windows decides to change those settings on its own.

The other thing to check is are you working someone split? I've lost the echo of my transmit text several times when the station I'm trying to work has a wide split. When tuning to his signal CWGet cannot "hear" your signal outside the pass band. I've found clicking on the Auto Threshold button will sometimes resolve this by presenting two different red trace lines in the lower screen area. One tracks his signal, the other yours and now your text shows up too.

73,
Gary AL9A

From: dl9gtb
Topic: 5533 Message: 5533

Hi,

I want to help my radio friend. He is about 70 years old and unfortunately can not speak English. He has a PC and there are CwType and CwGet integrated into AAlog very well. AAlog has automatically detected that the two CW programs are installed on the PC. So everything is ok.
Now he has bought a new PC with Win7. There is only OmniRIG detected but not CwType and not CwGet. We have everything reinstalled several times but always the same problem. Also, run the program as admin did not help. Is there a trick?

Running _every_ of these program "As admin" once (From right mouse click menu!) should be enough...

Hello.

Just install AALog to my Win8 netbook.
1. I have not error on exit. Look for screen settings of Win8. What size of the screen fonts you have?
2. be sure that you have fields to export in the right side box in the Select fields window.

5538. SeaTTY 2.38 beta is published

Yahoo group: dxsoft
Date: 2013-07-10 15:23:29 UTC
From: Sergei Podstrigailo
Topic: 5538 Message: 5538

Hello All,

I just uploaded SeaTTY 2.38 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

Auto start/stop method in HF-FAX mode is fully rewritten.

Your feedbacks are welcome!

--
Best regards,
Sergei

Hi Sergei
I have downloaded the new 2.38 and the auto start/stop in HF-FAX works perfectly on my set up well done and thank you
regards Peter

Topic: 5538 Message: 5540

Hello

As a new user of SEAtty, I want to thank Sergei for V238b. I have received several dozen faxes with it and it has worked flawlessly. Start/Stop is very reliable.

Is there a way to fix an image when it loses horizontal sync and the black margin bar goes to the middle of the image?

Are there any plans to add radio frequency control via CI-V to SEAtty?

5541. AAtest 1105 - does not save size and position for New QSO window

Yahoo group: dxsoft
Date: 2013-07-15 07:59:24 UTC
From: Erik Nielsen
Topic: 5541 Message: 5541

Hi Alexander

I have just updated AATEST to version 1105 and found that it does not save
the size and position of the New QSO window.
Whenever you start the program it returns to the original size from the
first start of the program,
which I think is not very good as it is much too large.

You can fix it by <-||-> button, if fax is in receiving window yet...

f> Are there any plans to add radio frequency control via CI-V to SEAtty?

Which control do you need ?

5544. Macro help - [m4] where does it come from?

Yahoo group: dxsoft
Date: 2013-07-24 04:09:14 UTC
From: w5vol
Topic: 5544 Message: 5544

I am a new user - so I might be missing something obvious.

I registered the aalog and tru-tty and put my call sign wherever it seemed to go.

But macro with [m4] still sends xx0xx for call sign.

So in macro I took out [m4] and put directly my call sign.

I hit F1 and it sent both CQ xx0xx and then CQ W5VOL.

Am I missing something about ini file or where to edit macro and/or put my call sign in database?

Thanks, Joe
W5VOL

w> I registered the aalog and tru-tty and put my call sign wherever it seemed to go.

w> But macro with [m4] still sends xx0xx for call sign.

~[m4] means "F4 macro".

So just edit "F4" macro text.

> [m4] refers to F4

Thanks Sergei!

I didn't realize one F button was referencing another F button! But that would offer a lot of flexibility in sequencing information.

I found the ini file - I seem to have ini files in several locations for some reason.

But I am now able to make changes and they persist!

Thanks again - now I just need to experiment some with codes and what they do!

5547. SeaTTY 2.39 beta is published

Yahoo group: dxsoft
Date: 2013-07-26 14:49:49 UTC
From: Sergei Podstrigailo
Topic: 5547 Message: 5547

Hello All,

I just uploaded SeaTTY 2.39 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

V2.39
Previously received and saved HF-FAX image can be opened by
"Edit image" command of popup menu now. Then image can be fixed
by "<-||->" or "<-/|\->" operations and saved with the same or new name.

Take to attention that "Auto Start/Stop" button is pressed off
by this command.
V2.38
Auto start/stop method in HF-FAX mode is fully rewritten.

Your feedbacks are welcome!

Radio frequency control via ICOM CI-V would be nice using the information from here:

http://www.nws.noaa.gov/om/marine/rfax.pdf

5550. SeaTTY 2.40 is released

Yahoo group: dxsoft
Date: 2013-08-20 13:54:11 UTC
From: Sergei Podstrigailo
Topic: 5550 Message: 5550

Hello All,

I just uploaded SeaTTY 2.40 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

--
Best regards,
Sergei

====
SeaTTY versions history

V2.40
The documentation was updated.
A minor bug in the slant correction procedure was fixed.
V2.39
Previously received and saved HF-FAX image can be opened by
"Edit image" command of popup menu now. Then image can be fixed
by "<-||->" or "<-/|\->" operations and saved with the same or new name.
V2.38
Auto start/stop method in HF-FAX mode is rewritten.
V2.37
A command "File / Stop Decoding From File" was made.
A button "FastD" (fast decoding from file) was made.
V2.36
1000 Hz deviation is supported in HF-FAX mode now.
Minor bug with working frequency saving (if AFC is switched on) is fixed.
V2.35
Maximum number of RTTY/NAVTEX Station ID filter items is increased to 32.
Filter for GMDSS DSC message format was made.
Some minor improvements were made.
V2.31
The "Setup / Other / Start SAME message by 1050 Hz tone" option was made.
V2.30
More settings for spectrogram and oscillogram colors were made.
V2.21
Options for tuning auto start / auto stop parameters of FAX mode were made.
See "Setup/FAX" page.
V2.20
Message filename shows time of message start, not time of message end now.
The "Setup / Other / EOM timeout in SAME" option was made.
A bug was fixed - a message with station ID in filename couldn't be really deleted by
"Delete" command.
"Auto start" and "Auto stop" procedures were slightly optimized in HF-FAX mode.

V2.10
"Setup / Other /Ignore EOM in SAME" option was made.
It is useful if SAME system transmit EOM _before_ voice message.
V2.0
The documentation was updated.
Some issues occurred under Windows Vista were fixed.
Default working directory of software is located in "Application Data"
("ProgramData" under Vista) in place of "Program Files" now.

5551. Help to print QSL Info

Yahoo group: dxsoft
Date: 2013-08-26 01:04:45 UTC
From: w5vol
Topic: 5551 Message: 5551

Anyone have some advice how to print QSL information or addresses?

I searched and found some .frf files and I see some .fr3 files.

The .fr3 file prints - but is there any help on how to configure it?

For example how to change text to 180 degrees.

It would be awesome to have a template for example 4 QSL cards where a picture could be inserted for front face. And basic operator information on back with some boxes for standard information.

If anyone has done this or has advice - it is welcome.

Thanks, W5VOL

Hello

>> For example how to change text to 180 degrees.
Run AALLabels
Open some fr3 file.
Ensure that View - Toolbars - Text is checked
Look for button with rotated "ab" text on toolbar. Select field and press
this button.

5553. v2.90 problem

Yahoo group: dxsoft
Date: 2013-08-29 16:57:59 UTC
From: <wb2yaf@...>
Topic: 5553 Message: 5553

I've been using True Rtty v2.85 without any problems. I have been trying to up grade to v2.90 and have had nothing but problems. I delete the previous version first and tried to install the new version here's what happens, 1. The new version is already registered to me, why when it's a completely new install. 2. No where in the setup is there a place to add station information. 3. No access to assign codes for different info for the marcos keys 4.Keys F1-F12 can not be engaged 5. Is there any where I can download the old version and re-install that ? The DX soft web support has been absolutely no help what so ever. I appreciated any help as to what I'm doing wrong. Thanks and 73, Lee WB2YAF

Upgrade is free so far, so your old registration key is valid.
It is saved into Windows registry to reduce amount of
everyday questions "I lost my code, please send it me again".

whc> 2. No where in the setup is
whc> there a place to add station information. 3. No access to assign codes

5555. RE: v2.90 problem

Yahoo group: dxsoft
Date: 2013-09-01 09:19:58 UTC
From: <wb2yaf@...>
Topic: 5553 Message: 5555

I have described to the best of my ability several times now. Once again There is no where I can assign the codes for the marcos key such as QTH-NAME RST CALL STATION-- The marcos keys that do engage use the xx0xx call and all the other default information in the program-NOT the information that was in v2.85 in simplier words nothing in the new program is from the old program. Now the keys F1 thru F12 cannot be pressed and do not work. This is the best I can describe it, the new version contains none of the old versions station information that I entered and had worked fine until I downloaded the v2.90 I've had True Rtty for many years and have always downloaded up-graded version without any problems except for this version they all worked fine. Have a great day.   --- In dxsoft@yahoogroups.com, <amx2@...> wrote: Hello Wb2yaf,

5557. AALog 3.2

Yahoo group: dxsoft
Date: 2013-09-14 14:12:42 UTC
From: Alexander Anipkin
Topic: 5557 Message: 5557

Hello

I just upload AALog 3.2 build 1168

Full install packege
http://www.dxsoft.com/aal3.zip

Update to 3.2 from previous versions
http://www.dxsoft.com/aal3-upd.zip

+ you can download list of LoTW user (Files - Import - LoTW users list) and AALog will display info about LoTW status of the station in new QSO window.
+ it's possible configure Ins key to switch between the main and the new qso window
- if the "New QSO" window is in "log writing" mode "Log-writing mode is active" message displayed and the clocks are not visible.
- fixed bug with "-" and "+" keys in RST fields. You can enter 59+10dB now. To increase/decrease S-report use Ctrl-"+"/Ctrl-"-" keys
+ press Alt+Backspace in the callsign field (New QSO window) to restore last saved callsign
+ in the right bottom corner of main window AALog show the number of the selected contacts
- fixed bug when own callsign from cluster replaces operator-entered callsign in the New QSO window
- Value of the Freq field in the New QSO field is always editable now. When you exit this field AALog will try to adjust the proper band value based on the entered frequency.
+ lookup in QRZ.RU <http://qrz.ru/> and HamQTH.com added. Now AALog support QRZ.COM <http://qrz.com/>, QRZ.RU <http://qrz.ru/>, Hamcall, HamQTH.com, dxsummit.fi, ik3qar.it
- it's possible customize internet sources where AALog will search data.
+ Option to Save and Load data field layout.
- fixed small bugs

Alex

I get an HTTP ERROR 404 when I try to open this link. So, I went to
www.dxsoft.com/aal3-upd.zip and I can download it,.

Now, file name is aal3-1168.zip

Is that correct ?

Best Regards
Dan Schaaf

??
Good evening!

This one works 100%, http://www.dxsoft.com/aal3-upd.zip?? no problems.

73 de sm3alr

Hello

I just upload AALog 3.2 build 1168

Full install packege
http://www.dxsoft.com/aal3.zip

Update to 3.2 from previous versions??
http://www.dxsoft.com/aal3-upd.zip

+ you can download list of LoTW user (Files - Import - LoTW users list) and AALog will display info about LoTW status of the station in new QSO window.

+ it's possible configure Ins key to switch between the main and the new qso window

- if the "New QSO" window is in "log writing" mode "Log-writing mode is active" message displayed and the clocks are not visible.??

- fixed bug with "-" and "+" keys in RST fields. You can enter 59+10dB now. To increase/decrease S-report use Ctrl-"+"/Ctrl-"-" keys
+ press Alt+Backspace in the callsign field (New QSO window) to restore last saved callsign
+ in the right bottom corner of main window AALog show the number of the selected contacts
- fixed bug when own callsign from cluster replaces operator-entered callsign in the New QSO window
- Value of the Freq field in the New QSO field is always editable now. When you exit this field AALog will try to adjust the proper band value based on the entered frequency.
+ lookup in??QRZ.RU??and HamQTH.com added. Now AALog support??QRZ.COM,??QRZ.RU, Hamcall, HamQTH.com,??dxsummit.fi,??ik3qar.it
- it's possible customize internet sources where AALog will search data.
+ Option to Save and Load data field layout.??
- fixed small bugs

From: Erik Nielsen
Topic: 5570 Message: 5570

HI

I have installed the newly released version 3.2 of AALog and it is working fine.

However I am wondering why I sometimes see a small red dot with a L in the left top corner of the Callsign field in the New QSO window.

I have not yet figured out what is the meaning of that.

Maybe someone could explain that to me ??

Hi,

I want to put in CwGet the zoom level to 2:1. Unfortunately, then my filter area is visible outside the window on the left. How can I improve it?

Subject: [dxsoft] AALog update

I like to simple 'paper-log' like outlay of AALog a lot and and am contemplating purchase. I'd like to know how updates are handled. Are all updates free after purchase, a certain number, updates to the next major version ?? Thanks guys...

Hi Sergei,

I have tested it and it works flawlessly. Thanks for your answer. I promise, tomorrow I read the complete documentation, really! ;-)

5584. Z6 - Kosovo new country for DXCC

Yahoo group: dxsoft
Date: 2013-10-25 09:27:52 UTC
From: Erik Nielsen
Topic: 5584 Message: 5584

Hi

Will there be an update to AALog wiht this new country,
or can we do it ourselves ?

I have found a new cyt.dat to be used for AATest for the coming CQWW
contest,
and Z6 is now recognized by the program, by AAlog is not updated.

Hi Erik

Well, until it becomes a DXCC entity officially, Alex will not update AALog because that country would then increase the Awards Totals by one for DXCC AWARD.

And, The other Alex, VE3NEA will not include it into Bandmaster until it is official.

How about Transnistria ??? Maybe time for a new entity there also. UA4WHX recently brought Tansnistria to our attention and into my log. (As Moldovia).

5592. Aatest 1.08

Yahoo group: dxsoft
Date: 2013-10-30 23:06:06 UTC
From: <w5vol@...>
Topic: 5592 Message: 5592

Alex,

I have two questions - I use aalog so I would like to use aatest. I used it for CQWWDX - but I had a very difficult time. It takes about one minute after I hit save for it to register over in the log. It was pretty frustrating. I could not find where to register it - the button would not work. I am not sure if there is a fee or not? I would like to use it, if I can get it working OK for other contests. Do you know what might be the problem?

2nd one - when I move the AAtest into my regular log - is there a way to get the information looked up for it - as it does for normal QSO's and fills in a lot of the data?

Thanks and 73's, Joe

Hello

1st problem is possible when you have a lot of spots from cluster. I know
this problem and work to solve it

Sorry, but do not understand what you mean in the 2nd question. After you
import data from aatest you can start function Fill missed data. And AALog
will insert data (name/qth/state etc) for stations already logged by AALog.

D> Ts-590 cwtype

Which interface do you use for CW keying?

Just read documentation and do appropriate settings (Port Type, Port Number, Pins ...)

5601. CW Type and Get questions

Yahoo group: dxsoft
Date: 2013-11-15 22:06:16 UTC
From: Paul
Topic: 5601 Message: 5601

Recently I was using another CWGet type program and I quit it and launched CWGet to compare results. When CWGet launched, it change the Kenwood 590s frequency and seemed to "hold" it to the new frequency - I'd turn the tuning dial and the rig would switch back.

Any idea what was going on?

Second, I've only used CWType using a com port (and adapter to convert to USB. On a bidding website, I've seen a cable that goes from USB to a key - same idea but uses USB instead of COM. Can CWType use a USB-to-cw plug cable so I can drop the adapter?

Thank you and 73,
Paul

CwGet can't do it...
It can tune RIG via OmniRig if you set it to do it.

But CwGet don't block manual tuning.

P> Any idea what was going on?

P> Second, I've only used CWType using a com port (and adapter to convert to

There is not such thing as "USB to CW _cable_ "

Such interface includes some kind of adapter.

It can be USB/COM adapter, RigExpert controller, WinKey controller ...

Yes, CwType can work with these adapters...

Topic: 5601 Message: 5603

Hi All;
Yes cw type will work with ts-590 but only on ssb, audio type cw.
Won't transmit on cw with usb cable. You will need an adapter for that
to work.
Ham radio deluxe will key your ts-590 with just the usb cable. Will
work fine. Try that program

5604. AAlog 3.2 issue

Yahoo group: dxsoft
Date: 2013-11-25 15:47:50 UTC
From: Wim
Topic: 5604 Message: 5604

Hi

I converted my AAlog v.2.47 to AAlog 3.2.
I am preparing AAlog 3.2 for DXCC in Awards Manager.
During April 2007 I worked 9M2/PG5M from SPRATLY ISLAND (1S) and forced these QSO's to 1S for DXCC (in V.2.47).
After conversion with 'CPY2TO3' programme these both QSO's have been assigned to Sealand (unofficial) (in V.3.2).
Now I try to assign these QSO's to 1S (Spratly) in AAlog 3.2 using the Change Territory option. Pressing SET in the 'Edit QSO info' window shows: -Spratly Is, but when I press OK and open the Edit QSO info again, the territory has been set to Sealand again.
Wonder if anyone else can check this out?

Hello

Look for another Spratly in the list. Without "-" sign. It has 9m0 prefix.
There are 2 items here bcs DXCC has deleted and active entities

Or you can use another trick. In the aalog folder find file calls.lst. By
notepad add string
9M2/PG5M=9M0
at the end of the file. Run AALog, select contact with 9M2/PG5M, press
button to change DXCC and press "Auto" button.

5607. Re: CW Type and Get questions

Yahoo group: dxsoft
Date: 2013-11-25 20:11:17 UTC
From: Paul
Topic: 5601 Message: 5607

Sergei,

Thank you for getting back to me.

I look at OmniRig and see why it is causing mischief.

I looked more carefully at the "USB" cable description because it says it supports CWType and I now understand that it has a built in COM adapter. That is nice because it is much smaller than the KeySpan adaptor I bought years ago.

Here is the description:
USB CW (morse code) keying cable with opto-isolator
One end of the cable has 3.5mm jack plug which connects to the CW key socket on the radio. A 6.35mm (1/4") adapter is also included. The other end has a USB plug which connects to the PC's USB port. The cable contains a USB to serial converter, so the cable appears as a COM port on the PC.

I hope to use this with a very small (10 inch screen) Laptop and a KX3 when portable.

I learned on a straight key long ago and at 66 yrs old, I'm having trouble getting used to even a single lever's side to side.

I have not used AAlog for sometime. I am using vers 3.2 for the first time. I am getting the following error message when I click on a call sign in the bandmap to transfer it to the new QSO window. Using Windows Vista

DMqLoTWUsers
can't format message 13:796 - message system code - 4
Dynamic SQL errors = - 204
TABLE UNKNOWN
LoTWUsers
at line 1, column 29

anyone any ideas?

5615. AAlog 3.2 customized colors

Yahoo group: dxsoft
Date: 2013-11-28 10:29:55 UTC
From: Wim
Topic: 5615 Message: 5615

Alexander
AAlog 3.2, I have another (beginner) question.
I would like to customize the background of selected QSO fields. The default is very light blue and has very low contrast to the normal background (white) on my Windows 8 computer.
So in 'Colors and Font settings'--> QSO list font I changed 'Background Selected contacts' to bright Green, but it does not have any effect with me. Wonder if I'm doing something wrong.
Selecting multi contacts to do a Multi QSO edit to complete Lotw contacts it is a very hard job this way, when you cannot (or hardly) see the selected QSO's while scrolling thru the contacts. I have thousands of Lotw confirmations to edit this way.
tks 73 Wim pa0wrs

You need to use 3.5 stereo jack with center ring is NOT connected.
Transceiver must be configured for straight key, NOT for paddle.

It looks like something is wrong in schematics.
Do you get appropriate manipulation when CwType is running?

I have used the scheme that is shown in the HELP section of CWType. The interface is simple enough for a non-techie to build using commonly available parts. The West Mountain RigBlaster Plus has a CW out that works, too. Roger W9NCQ

I'd just open this Dinner interface and add one more transistor (or opto-transistor) for CW keying...

Another way is to purchase interface with two outputs,
PTT and CW-KEY.

For example, RigExpert Tiny can be used:

http://www.rigexpert.com/index?s=tiny

Topic: 5634 Message: 5637

On a common auction site there are ready made cables for about $30. They don't need a COM port or additional adapter as the "COM" adapter is built into the USB cable. At the other end there is a 1/8 stereo plug - ring blank - it it comes with a 1/4 inch plug adapter.

Long ago, I made my own with a transistor and a few diodes - shown in the CW Help - and could fit it in the COM plug. But these days, with few computers sporting COM ports, the USB (built in COM) is cleaner - not as many dongles (like using the KeySpan adapters a few years ago.

If you are more an operator than a builder, I think you would like one of those ready made cables.

Just install the Drive (comes on CD or downloadable) plug the cable in and check Device Manager to see what COM port was assigned. Then configure CWTYPE to use that COM port and DTR for keying.

73,
Paul K7NHB

GM Wim,

You have to go in AALog directory and than in Call.list with Notepad. Write in ZK2=E6

73 Daki, 9a2wj AALog3.2 user

HI Wim,

For other thinks you wrote, you have to write call in the window NEW QSO and all other info (Date, Time, Mode, Band, RS(T) etc, press ENTER and than duble push left mouse, go to green ball near CQ in red colour, push on it, than go to DISPLAY ALL and in the Window COUNTRY you have to find what you are interested in (Name of the country, klik on it, go to SET push on it and the name or prefix will changed) With R110 PFX you have to go to www.raem110.eng <http://www.raem110.eng/> , find the list of R110 stations, and there you can find out from which country is Eg. R110RAEM and from which country is RJ110RAEM and than you can write in AALog which pfx belong which country from the AALog.

I do not know if I have explaned that help you,

73 daki, 9a2wj

Beste Wim,

Jij kan de status van de RAEM stations aanpassen als je op de kleine groene balletje in de New QSO window toetst. Daar kan je de relevante russische oblast kiezen.

Voor de ZK2 moet je de Prefix.lst file editen, maar normaliteer krijg je deze updates met de gratis upgrades van Alexander. Hij werkt heel hard op het sw, dus zijn deze update packettjes altijd heel nuttig.

Bel me avonds' als je meer vragen hebt (0654671013).

Groeten,

zoli ha1ag / pa1ag

Topic: 5639 Message: 5644

Hello

All prefix data located in prefix.lst file

To add prefix E6 to ZK2 you need edit this file
Open it in notepad and find line
01|-30574|-3430|Niue|ZK2|32|62|OC|Pacific/Niue|188||||ZK2|2

and replace it with new one

01|-30574|-3430|Niue|ZK2|32|62|OC|Pacific/Niue|188||||ZK2,E6|2

If you want to replace ZK2 to E6 in the dxcc award list go to config menu
Select Awards list then select dxcc and press edit
Press button near Closed references list find zk2 and replace to E6
Thats all

RZ110RAEM is detected as Northwest Russia. For correct contry settings you
need add RAEM stations to calls.lst file
For example
RZ110RAEM=UA3A

5648. RE: AAlog 3.2

Yahoo group: dxsoft
Date: 2013-12-29 19:28:31 UTC
From: <gergely@...>
Topic: 5608 Message: 5648

I have the same problem.
I am running Windows 8.1 (64 bit).
AALog version 3.2.0.1168.
Whenever I enter a single digit (character etc) to the new qso window I have this message:

DMqLoTWUsers
can't format message 13:796 - message system code - 4
Dynamic SQL errors = - 204
TABLE UNKNOWN
LoTWUsers
at line 1, column 29

The pop up window has to be closed, than typing in the next digit of the new call brings up this message again.
It goes on for all digits of the new call. The log is useless now.
I was upgrading from XP, where it was working just fine.
Please tell me any suggestions !!
Regards
Lajos HA0DR & AA1BW

Hi, I have the same problem on win 8.1 (64). I use the latest AALog version (3.2.0.1168)
Whenever I just enter one letter into the call field I have this problem. After entering each !! letter of the call, this error window pops up ! So 4-5 window pop-ups fort just one call.
AALog is useless now. I used in on XP, flawless, and just upgraded my home PC system.
Any comments

This is wrong update of database. Thanks to MS for virtualization of the
Program Files folder.
1. Look for aalog.gdb in your profile folder.
2. copy aalog from program files into c:\aalog (for example)
3. copy aalog.gdb from your profile into c:\aalog
4. Run update package and select c:\aalog as destination

It must help

5654. need source for CWTYPE Macros

Yahoo group: dxsoft
Date: 2014-01-03 03:08:30 UTC
From: Paul
Topic: 5654 Message: 5654

I'm starting to use CWTYPE again and haven't found any sources macros others have found useful. Also, one link mentions a file called sample.cwt that contain prosigns and can be edited. But I haven't found such a file in the CWTYPE folder. I'd like to add the new @ sign.

Is Sample.CWT still used? Where would I find it under Windows 7? Can I edit it with NotePad?

Thank you and 73,

Paul

Hello Paul,

Friday, January 3, 2014, 11:08:30 AM, you wrote:

P> I'm starting to use CWTYPE again and haven't found any sources macros
P> others have found useful.

All macrosequences are described in CwType help-file...

P> Also, one link mentions a file called sample.cwt
P> that contain prosigns and can be edited. But I haven't found such a file in
P> the CWTYPE folder.

It is located in CwType _working_ folder, defined in CwType shortcut (icon),
not in the folder where CWTYPE.EXE is located.

P> I'd like to add the new @ sign.

P> Is Sample.CWT still used? Where would I find it under Windows 7?
See CwType start shortcut properties...

P> Can I edit it with NotePad?

Yes, you can edit edit (or its copy) and select it in "User-defined charset" menu.

Hello Paul,

Saturday, January 25, 2014, 11:16:46 PM, you wrote:

P> Is the file type .txt?

It is plain text file with any extention.
But extention should be incuded into "Filename", surely.

P> Can it include ~[something] sequences?

Yes, ~[...] and `[...] sequences can be included into a file.

P> Is the file in a specific folder or does fFilename have to contain the full path from the C drive?

It _can_ contain full path.
If path is absent file is looking for in "working directory"
(defined by "start in" property of software shortcut).
It is _not_ the same folder where exe-file is located.

From: Paul
Topic: 5662 Message: 5662

My ~[cl] and ~[csnt] macros work fine if that is the only command in the macro. But if I put either one of those at the end of text to be sent, even after ~[rx] to get back to receive, a character } is still left in the window.

IF I want to send QRL? and return to RX and clear both text windows how can I do it with one macro?

~[tx] QRL? ~[rx] ~[csnt] ~[cl]

leaves a } in the text to be sent window.

Thank you and 73,
Paul K7NHB

At first, you need to use `[rx] and `[csnt], not ~[...]

At second, use CwType MOX settings if you don't want to see '}' :-)

Topic: 5662 Message: 5664

Sergei, Thank you for the prompt reply but that macro didn't work for me.
To identify the fields, the field that shows what has been sent is the top field and the one that show that will be sent is the bottom field.
~[cl] by itself clears the top window
~[csnt] by itself clears the bottom window

It sounds like you are suggesting I use ` instead of ~ in front of the square brackets but I thought the documentation said either could be used.

What setting so I need to make in the MOX preferences?

When I substituted ` for ~ it even left more content in the windows.
~[tx] QRL? `[rx] `[cl] didn't work
~[tx] QRL? `[rx] `[csnt] didn't work

But ~[cl] or ~[csnt] work when they are the only content of a Macro.
In other words, ~[cl] by itself clears the bottom field with no leftovers.

I'm assuming ` is lower case of the ~ key.

Can anyone post a macro that clears both fields after some content, like QRL or a 3 x 3 CQ string is sent?

Maybe I just need that MOX setting because one combination I put together got real close and only left the right square bracket]

Thank you and 73,
Paul K7NHB

5665. How do I disable CWGet's changing rig freq?

Yahoo group: dxsoft
Date: 2014-02-01 21:02:16 UTC
From: Paul
Topic: 5665 Message: 5665

While using CWGet it seems to be changing the frequency on the dial. I know it is tied into omnirig that I use with Faros to watch beacons. So it is fine when I'm using that or BandMaster or other applications that control the Kenwood. But I don't want it changing the RX freq when I'm using CWGet. What setting do I need for that.?

My Tuning preferences are set to Rig1 - which is the Kenwood but Tune Rig by is set to NONE. Shouldn't that disable away any software freq changes?

Thank you and 73,
Paul K7NHB

Yes, but ~[...] macroces are executed _before_ macro text is placed into input window.
`[...] macro is executed when it shold be "transmitted".

P> What setting so I need to make in the MOX preferences?

Enable auto-RX to avoid `[rx] macro using ...
Auto-TX is also useful option :-)

P> When I substituted ` for ~ it even left more content in the windows.
P> ~[tx] QRL? `[rx] `[cl] didn't work
P> ~[tx] QRL? `[rx] `[csnt] didn't work

Yes, `[rx] should be _last_ macro ...

P> But ~[cl] or ~[csnt] work when they are the only content of a Macro.
P> In other words, ~[cl] by itself clears the bottom field with no leftovers.

P> I'm assuming ` is lower case of the ~ key.

P> Can anyone post a macro that clears both fields after some content, like QRL or a 3 x 3
CQ string is sent?

I wonder WHY do you want it?

I can understand if you wish to clear text _before_ transmitting.
But I'd prefer to see just transmitted text...

5670. Re: how do I clear the sent window after send?

Yahoo group: dxsoft
Date: 2014-02-03 03:21:08 UTC
From: Paul
Topic: 5662 Message: 5670

By putting MOX to enable and checking the box to turn of TX after silence I was able to eliminate the } but I still have been unable to clear the field as part of the sending macro.

I agree that normally I like to keep the content of the QSO as I go. But what I'd like to clear is pre-QSO. Like calling QRL? before transmitting a CQ. Or clearing my standard 3 x 3 CQ sequence. No need for that to stay in the sending fields after it has been sent.

Putting the ~[cl] or ~[csnt] clears the field of previous text if I put it before the sent text, but it they don't clear the field, even if I use `[cl], if they are after the transmitted text string in the macro.

Looks like it is as good as I can get it for now.
Thank you, 73

5672. [dxsoft] Re: how do I clear the sent window after send?

Yahoo group: dxsoft
Date: 2014-02-07 20:16:03 UTC
From: nano1957@libero.it
Topic: 5662 Message: 5672

By putting MOX to enable and checking the box to turn of TX after silence I was able to eliminate the } but I still have been unable to clear the field as part of the sending macro.

I agree that normally I like to keep the content of the QSO as I go. But what I'd like to clear is pre-QSO. Like calling QRL? before transmitting a CQ. Or clearing my standard 3 x 3 CQ sequence. No need for that to stay in the sending fields after it has been sent.

Putting the ~[cl] or ~[csnt] clears the field of previous text if I put it before the sent text, but it they don't clear the field, even if I use `[cl], if they are after the transmitted text string in the macro.

Looks like it is as good as I can get it for now.
Thank you, 73

I no longer have a CD, I think I downloaded the software years ago and
then received an email registration code. I have a review copy on my
new computer and need to add my reg code to register the copy. Then I
can dump the old computer.

I'm trying to find the reg information so I can transfer it to the new
computer.

5678. CwGet 180 file

Yahoo group: dxsoft
Date: 2014-02-09 20:29:25 UTC
From: cfhiser@bellsouth.net
Topic: 5678 Message: 5678

My Dad (W5NVK) called me the other day saying he had a file on his computer named CwGet180 that was 3.2 GB big and wondered if I had the same thing. I said no. We both run CwGet UA90v v2.26. I'm wondering if anyone knows what this CwGet180 file is for and if W5NVK can delete it without interfering with his normal CwGet program? If you can delete it, how do you find it to delete it properly, as it is not in the control panel uninstall list.

Thanks,

Chuck W4OJX

Your new computer show have a tool to allow you to copy files from one computer to another. When I got a new comp.years ago, check your tool and or accessories in ur start up. If I find the name of that file I will email you.

Topic: 5674 Message: 5681

Assuming you mean the registration code doesn’t “stick” in Windows 8, it’s a known "feature".

Right click on the program icon and “Run as administrator”, even if your account has admin privileges. Then you can enter the registration details and it should be permanent. You can than close the program and start normally in future.

Windows 8 protects it’s registry differently so any changes are temporary unless the program doing the change has the necessary privileges.

Hello

All AALog data is in the file aalog.gdb. You can just copy this file.
Please note if you have Windows Vista/7/8 and AALog installed in the
"Program files" folder then your active aalog.gdb stored in the you profile
folder.

This person probably suggested this for AALog.
Your need install CwGet at new computer,
not just copy it.

R> but when opening the program it tells me that it is an
R> unregistered copy.

R> I had been trying to find the registration file to move that over, with
R> no success.

Just find e-mail with reg-code and copy/paste it.

I think, you have backup copies of important data, didn't it?

Another way is to find CWGET.INI in working directory (in "Application Data",
not in "Program Files") at old computer and copy/paste all text from it as reg-code.

Hello Jose,

Wednesday, March 26, 2014, 3:02:16 AM, you wrote:

JC> How can I pay $ 25 for Cluster Monitor and I can not see it working.?

Surely you should NOT pay in this case.

Cluster Monitor is shareware, that is try-_before_-pay software.

If trial version not works at your computer,
payed version will not work too.

Thanks Sergei,

I appreciate that you take your time and answer my email

It`s true and fair your answer.

But there must be some reason why you do not work.

This can be a good challenge.

Thank you very much again.

Topic: 5687 Message: 5693

Hello guys

This is very interesting.

Talk to a good colleague (he is user the Cluster Monitor) and asked if he had a problem to install and operate the Cluster Monitor and told me not to.

  ..."It worked very well"...

And brainstorming to find my solution says that the execution of the installation of Cluster Monitor creates more 15 to 20 files.

Upss, in my case it is not, only 9 files are installed and one empty folder.

I think there is a possibility that the operating system is restricting complete installation of Cluster Monitor.

It possible that this could happen ....?

Regards

73

5695. AALOG LOTW Report DATA Errors

Yahoo group: dxsoft
Date: 2014-04-15 17:39:19 UTC
From: <w7do.sc@...>
Topic: 5695 Message: 5695

Attempting to update my logs with LOTW confirmation, I encounter a number of "DATA Errors," with a number of log entries, examining these log entries does not indicate an obvious problem. Has anyone ran into this issure? As this problem prevents the LOTW report from updating my main log?

Gary, W7DO

5699. AALog v.3.3 build 1175

Yahoo group: dxsoft
Date: 2014-06-10 16:08:54 UTC
From: Alexander Anipkin
Topic: 5699 Message: 5699

Hello just uploaded update of AALog

- Merge Database bug fixed
- to call previouse QSO use Ctrl+Alt+Backspace now
+ Added hints for the buttons in the Select Export fields window
+ LoTW users icon added in the Spot-list
- fixed bug with error window when exit from "frequency" field in the New QSO window (if OmniRig was not installed)
- can't
+ it's possible set period of statistic
+ added russian prefixes for Crimea (ukrainian are not deleted)

full package
www.dxsoft.com/aal3.zip

You must watch the timing closely. Run a clock setting program so that
your computer clock stays within 2-3 seconds with correct time. I had
the same thing happen and that cured my problem. Roger, W9NCQ

5706. TrueTTY 2.95 is released

Yahoo group: dxsoft
Date: 2014-08-15 19:50:02 UTC
From: Sergei Podstrigailo
Topic: 5706 Message: 5706

Hello All,

I just have uploaded TrueTTY 2.95 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.truetty.com/truetty.zip

--
Best regards,
Sergei

==========
TrueTTY Versions History

V2.95
The "Narrow" option was added into "Filters" menu in RTTY and ASCII modes.
Narrow filters can be useful to eliminate interference from strong near frequency stations.
Wide filters can be useful to decoding signals corrupted by polar flutter.
Use optimal filters in all another cases.
V2.90
Some minor improvements were made.
V2.87
"Setup/Interface/Messages channel" option is used for multi-RIG support now.
See http://www.dxsoft.com/dxs-exch.zip for details.
"Mono-Left-Right" options define used soundcard channel for input and output.
V2.85
The Ctrl-U hotkey switches "Tuning Rig by" state between
"NONE" and last selected tuning method ("Main VFO" or "RIT").
After switching to RTTY mode speed and shift are not reset to 45 Bd / 170 Hz,
but are set to last values used in this mode.
V2.81
Right mouse button click (or left mouse button with "Shift" key pressed) make
TrueTTY to do fast decoding of one-minute prehistory of signal at selected frequency.
By "Replay" button one-minute prehistory of current signal is fast decoded now.
[...]

5707. Question please

Yahoo group: dxsoft
Date: 2014-08-18 21:11:12 UTC
From: Gary Stone
Topic: 5707 Message: 5707

I am new to AALog and would like to have the program automatically bring up the State (in the case of USA contacts) from the Internet.

Can this be set to bring up the US State (like CA) and automatically place in the 'new qso' window?

thanks,

Gary, N5PHT

Hi all, I am a user of registered of CwGet, CwType and AAlog3 and I also use the microHAM microKEYER II.
I would like to practice in the cw mode so you can tell me some program that allows me to run simulations of cw QSOs also using the paddle? (like the old PED or MorseRunner or Rufz or others).
Thank you in advance for your reply73 de enzo I8BVW

Enzo -

The only Code Practice I ever used was the ARRL Code Practice. They have some good practice files with code and text on the ARRL website. Here is the link: http://www.arrl.org/code-practice-files

I hope this info will assist you in your CW endeavors. Please let me know if it helps.

73 and God Bless!

Lou WA5LOU

I thank you
for all the answers but I honestly do not understand why there are on the web so many freeware or shareware programs that have a contest simulator using only the keyboard and no one program that also uses the paddle.
Only CwType use the keyboard and the paddle and interfaces with AAlog3 and CwGet; but it is so hard to write a small program (as PED) to merge to AAlog3 or there are some intractable problems of programming ?
I'm not a programmer but I could work for free to the creation of this CW qso simulator because I believe that the CW mode is nice if you use a straight key or the paddle.
I believe that there are many HAM operators who would be happy for this program because it is really embarrassing to make a QSO with a cw operator without the necessary expertise.

Because there are not reasons to use a paddle in contest :-)

More over, there are not reasons to use a paddle with computer.
Keyboard is MUCH more convenient instrument.

I wanted CW software which supports both keyboard and paddle for years,
but when I make CwType I found that I don't need a paddle at all :-)

Hello Sergei,
I agree to the contest but for normal cw QSO I think the paddle is still used by many of Ham operators because there are many companies that sell straight key and paddle large and small.
I wish I had done a simulator for normal QSO and you could use a text file within which place names, towns, antennas etc. so that each QSO may make available a random call, a random city, etc and I believe that this program could be of interest to beginners and experts cw operator because you could vary the speed of the noise etc..
I believe that if you had this simulator the cw mode would increase enthusiastic operators .

Hello

Just uploaded new version of AALog 3.4 build 1178 to websites

+ added support for XML subscibtion to QRZ.COM
+ Added filter by QSL statuses in the Awards manager window
- fixed problem with new URL for LoTW reports download
- fixed bug with manual LoTW report import.
- added message boxes when export/import was ended
- fixed some bugs

Hello Alexander,
Good day and Thank you for the new update , Its great to have qrz.com XML integration now.
I only wish if you can make the software to pull automatically the data from qrz.com and insert it automatically into the different QSO fields (name , qth , etc..)
Thank you and Best 73,

Hi. I purchased a cw to keyboad interface from China using usb connector to my computer. I am trying to get CWTYPE to key my IC751A Transceiver. Can someone explain to me how to set the interface page in CWTYPE. Right now all the port addresses say 00.

I assume that is the problem.

Thanks,
Kim

You most likely need a cable that goes from radio key jack to computer.I use one from Donner digital abour $25.00 dollars it is called a hard key cable.That is then connected to a usb to serial port adapter. I use keyspan, it come with drivers.Once you connect it to the computer go into device manager and look at list of comports.As an example mine says comport 4 keyspan.So when you go into cwtype you choose that comport.I am not a home.\, to look but that should get you started.73 John K5JRW

Hi Kim,

I built the interface that is described in the CWType program in the HELP/Content/Connection to Computer section of the program. I use only the top section of the "Simplest CW Interface" that uses the DTR pin on the 9-pin serial port connector. I use an USB to Serial cable to connect to the computer side if the interface and a cable to the straight key to control to the transceiver. I use VOX Break-in keying of the transceiver. During the set-up of the program, I chose to use the Com 5 port to make the interface function. If you use one of several USB ports on your computer, you will need to search which COM port is active. Start with COM 1 and proceed one port at a time until you find which one is assigned to the USB port you are using, Be patient, as it is frustrating getting the program to interface with the computer correctly. You can test it by turning the VOX off and keying the side-tone Oscillator only. I also have a RigBlaster Plus interface for other digital programs, but I prefer the direct connection to the transceiver in parallel with the hand key. Good Luck.

Roger
W9NCQ

Got a chance to look at the setup today.
I just use keyboard from my computer.
It is a wireless logitech allows me to relax and send code Hi Hi.
Anyway I use a splitter on back of rig so I can use my paddles or my keyboard.

The settings cwtype are interface : COM.port(via Windows API)
port number com4
paddle port none
ptt rts
key dtr
power 1 none
power 2none
sound: computer card
real output sampling rate 1125.00
tone 1000
rise/decay time ms 15
Mox and paddles:
(checked) transmit at keyboard if at least 2 symbols entered
(checked) tnx on paddles press with key delay ms 10
(checked) tx off at silence dots 8
beacon off
paddle in lambic mode
(checked) paddle with dashdot memory (modeB)

I hope this helps also should you not get keyboard
drivers to work.
The Donner Digital hard keyer cable $ 19.00 They are a USA outfit and you can use any
compatible
prolific connecter.

Thanks for your response Roger. Cwtype workings fine now using COM3 and the first game port in the drop down list. By law the Chinese vendor could not send a driver cd so my computer did not recognize the interface. A kind had emailed the driver to me as a jpg file. I changed the name and decompressed it and it installed east. Now interface and Cwtype work fine.

Thanks again,
Dave

Hi Kim,

I built the interface that is described in the CWType program in the HELP/Content/Connection to Computer section of the program. I use only the top section of the "Simplest CW Interface" that uses the DTR pin on the 9-pin serial port connector. I use an USB to Serial cable to connect to the computer side if the interface and a cable to the straight key to control to the transceiver. I use VOX Break-in keying of the transceiver. During the set-up of the program, I chose to use the Com 5 port to make the interface function. If you use one of several USB ports on your computer, you will need to search which COM port is active. Start with COM 1 and proceed one port at a time until you find which one is assigned to the USB port you are using, Be patient, as it is frustrating getting the program to interface with the computer correctly. You can test it by turning the VOX off and keying the side-tone Oscillator only. I also have a RigBlaster Plus interface for other digital programs, but I prefer the direct connection to the transceiver in parallel with the hand key. Good Luck.

John,

Thanks for your reply. The Cwtype wasn't the problem. The interface vendor from China couldn't send the cd driver by mail. I obtained the driver from another ham. Once I installed in Cwtype works fine using Com3 and the 1st listed game port. All is fine now.

Thanks again,
Dave

Subject:Re: Re: [dxsoft] CWTYPE

Got a chance to look at the setup today.
I just use keyboard from my computer.
It is a wireless logitech allows me to relax and send code Hi Hi.
Anyway I use a splitter on back of rig so I can use my paddles or my keyboard.

The settings cwtype are interface : COM.port(via Windows API)
port number com4
paddle port none
ptt rts
key dtr
power 1 none
power 2none
sound: computer card
real output sampling rate 1125.00
tone 1000
rise/decay time ms 15
Mox and paddles:
(checked) transmit at keyboard if at least 2 symbols entered
(checked) tnx on paddles press with key delay ms 10
(checked) tx off at silence dots 8
beacon off
paddle in lambic mode
(checked) paddle with dashdot memory (modeB)

I hope this helps also should you not get keyboard
drivers to work.
The Donner Digital hard keyer cable $ 19.00 They are a USA outfit and you can use any compatible

prolific connecter.

From: kimmed51@yahoo.com
Topic: 1805 Message: 5740

Thanks to all who responded to my Cwtype issues. As it turned out the computer did not recognize the interface. The ebay vendor from China said he could not send the cd driver by mail because it is illegal for him. I obtained the driver from another kind ham by email. Once I successfully installed it Cwtype started working fine.
For me it works with vox on, com3, and the first game port listed on the drop down box. Cwtype seems to work very well. I'm setting up and learning the macros so I can send and receive at my speed. Fortunately I don't need Cwget. One less program to fiddle with. It's great not needing a keyer any longer. Thanks again to all. 73s,

Dave,

Tonight Cwtype stopped working entirely. Again settings did not remain after I closed the program then reopened it four hours later. Also on some setting I get the message "driver not found" (com1), and "com port open error"(com3).

Can someone help me get this working again?

5747. How to transmit "1 up"

Yahoo group: dxsoft
Date: 2014-12-11 18:26:37 UTC
From: jsdroyster@...
Topic: 5747 Message: 5747

I am trying to learn CWtype used in conjunction with CWSkimmer.
If receiving at the clicked frequency in CWkimmer, how do I transmit 1 up in CWType without losing the decoded signal ?

If I use CWGet instead of CWWSkimmer is this easier?

THANKS!

5754. Fwd: AALog 3.5.0 Build 1183

Yahoo group: dxsoft
Date: 2014-12-17 17:30:31 UTC
From: Alexander Anipkin
Topic: 5754 Message: 5754

Hello

I just uploaded new version of AALog into websites

ATTENTION!!!
Default folder for installation was changed. To decrease number of problems with
Windows Vista/7/8 default folder for AALog is - C:\AALog3 now.

- support for new dxsummit.fi design added
+ support for file with additional callsign-based data added. Look for notes.txt in AALog folder which is a simple text file. You can edit it with Windows' Notepad for example . File format is:
Callsign<space>Additional_info. AAlog displays the additional info of a perticular callsign (if the callsigns exists in the notes.txt file) when you tab out from the Call field. This pop-up message will disappear automatically after N seconds (you can customize this value) or after the callsign changed or the QSO saved.
+ award statistic can be rescanned individually for a selected award only. "Update Award"button in the "Awards Manager" window added. Rescan will only update the data in the award table and will not change QSOs data.
+ sorting option by field GRID added to Main Logbook Window
+ export to CSV (Comma separated text file) of current view of Awards Manager table added.
- minimal size of QSL Service window is limited now.
- regions list KDA corrected (if you install update and you need this award just clear list in Tools - Awards List - KDA and import new list from folder /ref)
- AALog will not ask about importing contest exchanges when you import LoTW and eQSL.cc confirmations

Download it from:

New setup:
http://www.dxsoft.com/aal3.zip
http://www.hamport.com/aal3.zip

Update from previous versions:

5756. SeaTTY - datestamp of decoded DSC messages

Yahoo group: dxsoft
Date: 2014-12-28 17:02:30 UTC
From: Richard Ware
Topic: 5756 Message: 5756

Hi folks

I've recently downloaded/registered and am using SeaTTY version 2.40, mainly for decoding DSC messages

Although there is an option to time-stamp raw messages there doesn't appear to be an option to time-stamp decoded messages, and that to me would me much more beneficial. I know each decoded message is saved as a text file which is time-stamped but I'd personally like to see that date and time at the bottom of each received message. Is there any chance that this will be included in a future release ?

Thanks

Rich

5759. Newby Question on TrueTTY

Yahoo group: dxsoft
Date: 2014-12-30 17:08:46 UTC
From: Frederick R. Vobbe
Topic: 5759 Message: 5759

For Christmas I received an FT897D with SignaLink USB. I have been having fun with it operating PSK31 mode. When operating I have the radio in the "digital" mode.

My question is when operating RTTY, what mode should the radio be in? It seems when I'm in digital mode I can't copy anything. If I change the radio to Upper Sideband then I can copy RTTY with a setting of 50 baud. (I've been watching WA8QYJ operating on 18.098.26 for the past half hour). My question is; if I wish to transmit, does the radio have to remain in Upper Sideband, or should it be operating in digital, or something else.

I'm just a little confused, and not finding anything of use on the web or by RTFM (Yaesu manual).

I would appreciate a nudge in the correct direction so I can enjoy the radio/software/modes.

You can use

1. USB (DIGI-R) and "Normal" button position of TrueTTY

OR

2. LSB (DIGI) and "Reverse" button position of TrueTTY

I use TruTTY and SignLinnk. I have to have my rig in "DATA" and USB. I don't know if you rig has a special setting for running rtty? There may be a 'digital' setting somewhere but I don't know.

I do know that 45 baud is standard for RTTY not 50. That may be the problem.

From: Frederick R. Vobbe
Topic: 5759 Message: 5762

Yes, I do have “DIG” on my radio. The Yaesu FT897D manual (pg-38) says to the radio in that mode, turn on the YF-122C (500 Hz filter), and I should be set. I’ve never been able to get it to decode with, or without the filter. I have been able to get it to decode in the USB mode.

I’m going to try defaulting parameters again on the radio, and then blowing the programming to it after reviewing settings. I suspect it has to be something in a setting not to get the desired result.

PSK31 is working great, which is why I’m wondering if it’s not a setting in the radio or in the TrueTTY application. I checked levels on the SignaLink-USB and everything is spot on.

FRVfrcd> or without the filter. I have been able to get it to decode in the USB mode.

It means that DIGI mode probably use LSB filter (for historical reasons).
Youe should something like DIGI-R which is USB.

[...]

FRVfrcd> PSK31 is working great, which is why I?m wondering if it?s not a
FRVfrcd> setting in the radio or in the TrueTTY application.

PSK31 is not sensitive to spectrum inverse (which is occurs in LSB mode),
but RTTY is .

Best regards,
Sergei

5766. SeaTTY and IPad

Yahoo group: dxsoft
Date: 2014-12-31 21:35:43 UTC
From: Dan` Morley
Topic: 5766 Message: 5766

Hi,
I am new to this group.
I have a SSB and SeaTTY, with which I can successfully receive wxfax.But I am thinking of purchasing an IPad to use with SeaTTY. The IPad does not have a mic input. Can I use a USB / mic adaptor to receive SeaTTY on an IPad?ThanksDan Morley

You can't use SeaTTY on iPad at all.

SeaTTY is software for Windos, not for IOS .

5769. DARK 10m Contest

Yahoo group: dxsoft
Date: 2015-01-05 19:33:31 UTC
From: i8bvw.enzo@...
Topic: 5769 Message: 5769

Hi everyone,
Saturday January 11 there will be the "DARK 10m contest" so I would use AATest with CWType but I've read in the config menu contest program "not ready".

Any news !!

Thank you in advance for your reply.

5770. SeaTTY 2.45 beta is published

Yahoo group: dxsoft
Date: 2015-01-06 13:22:42 UTC
From: Sergei Podstrigailo
Topic: 5770 Message: 5770

Hello All,

I just have uploaded SeaTTY 2.45 beta to the main site and mirror:

http://www.dxsoft.com/seattyb.zip
http://www.hamport.com/seattyb.zip

Your feedbacks are very welcome!

--
Best regards,
Sergei

==========

SeaTTY versions history

V2.45
The "Setup / Interface / Soundcard number / ... / Mono-Left-Right" option was made.
It allows to connect two signal source to one soundcard.

The "Setup / Interface / Nominal sampling rate " option was made.
The sampling rate can be 11025 (default), 22050, 44100 and 48000 samples per second.
This option can be useful to avoid soundcard driver bugs (some soundcard drivers work bad
at low sampling rates) or to connecting to digital sound source via virtual soundcard
without re-discretization.

The "Setup / Text / Put time stamps in saved text files" was made.
UTC or local date and time of message starting are added in a bottom
of saved message if this option is enabled.

V2.40
The documentation was updated.
A minor bug in the slant correction procedure was fixed.
V2.39
Previously received and saved HF-FAX image can be opened by
"Edit image" command of popup menu now. Then image can be fixed
by "<-||->" or "<-/|\->" operations and saved with the same or new name.
V2.38
Auto start/stop method in HF-FAX mode is rewritten.
V2.37
A command "File / Stop Decoding From File" was made.
A button "FastD" (fast decoding from file) was made.
V2.36
1000 Hz deviation is supported in HF-FAX mode now.
Minor bug with working frequency saving (if AFC is switched on) is fixed.

V2.35
Maximum number of RTTY/NAVTEX Station ID filter items is increased to 32.
Filter for GMDSS DSC message format was made.
Some minor improvements were made.
V2.31
The "Setup / Other / Start SAME message by 1050 Hz tone" option was made.
V2.30
More settings for spectrogram and oscillogram colors were made.
[...]

Dear Sergei..
Thank you for the upgrade wirh the requested soundcard modification..
A new question: is it possible to choose (maybe eriting in the ini file) the directory of the txt or received texts? Many thanks
Stefanazz

Ssgcd> Stefanazz

Messages and raw logs folder are created in a "working directory" of SeaTTY.

But SEATTY.INI files is looking for in this folder too.

So just change "Working directory" (or may be "Start in") property of SeaTTY shortcut
and copy SEATTY.INI there.

5775. problem after update

Yahoo group: dxsoft
Date: 2015-01-08 13:25:18 UTC
From: Özer ÖKSÜZ
Topic: 5775 Message: 5775

Hello Alexander

After a 4 to 5 years of break, I am back on the radio again.Updated AAlog from 3.1 to 3.5 yesterday and when I record a new QSO some error notes apeear as below:

"DMq.LoTWUsers:
Can't format message 13:796 -- message system code -4.
Dynamic SQL error.
SQL error code= -204.
Table unknown.
LOTW_USERS.
At line 1, column 29."

Downloaded my all LoTW data to AAlog and refreshed awars databases.I can see my all LoTW confirmations at awards statistics...

I need help...
Thank you!

5776. SeaTTY - another request

Yahoo group: dxsoft
Date: 2015-01-08 21:47:24 UTC
From: Richard Ware
Topic: 5776 Message: 5776

Sergei,
Would it be possible to add the following feature to SeaTTY?
What I would like to see is in the SETUP > TEXT window.... a tick-box option for GMDSS so that the user can input the frequency that is being monitored. If a frequency is entered and the box is ticked, the frequency appears with the time-stamp on decoded messages, like the example below

08.01.2015 20:34:05 UTC
12577.0

or like this

08.01.2015 20:34:05 UTC (8414.5)

Regards
Rich

5778. AALog 3.6.1 Build 1188

Yahoo group: dxsoft
Date: 2015-01-10 09:26:25 UTC
From: Alexander Anipkin
Topic: 5778 Message: 5778

Hello to all

I just upload new version of AALog 3.6.1 Build 1188 into websites.

Whats new:

+ Additional option for filtering references in Award Manager window added. For example you can filter DXCC entities from a given continent or counties for a given US state. You need import new references list into AALog. See http://www.dxsoft.com/ssi/instructions/Awards.htm for details.

+ You can select the type of QSO confirmation (QSL/LoTW/eQSL) that contributes to determine displaying New Ones in New QSO window

+ You can select the type of QSO confirmation (QSL/LoTW/eQSL) that contributes to determine displaying New Ones in Spot list window

+ When you select several contacts in the log and press key to change QSL status AALog opens global edit window and set proper value (before this release you had to press F4 and select proper value yourself)
- Bug solved: when Edit QSO window was openen from "Search contacts" window AALog did not clear the field "Note for callsign" when opening an other contact. Solved.

- Quick search in "Search in QSL Managers database" takes sorting preference into account. If database view is sorted by Manager search value will be taken as a manager, if the database is sorted by call, the search will be executed for the callsign.

+ Great Circle azimuth bearing to DX column is added in the spots list window

+ You can select type of confirmation (QSL/LoTW/eQSL) that counted to display in the Bands/mode page in the New QSO awards stat window

+ AALog now stores version of the database file and automatically upgrades it if necessary.

- Bug solved: Error in Global edit when length of value "Operator" field was bigger than 10 characters. Solved.

- Problem with copying image from QRZ.com fixed

- Problem with CTRL+O shortcut in "Search contacts" window fixed

+ Additional option for filtering references in Award Manager window added. For example you can filter DXCC entities from a given continent or counties for a given US state. You need import new references list into AALog. See

http://www.dxsoft.com/ssi/instructions/Awards.htm for details.

+ You can add field with QSO number. Please note: this is number in THIS VIEW ONLY.For example it change when you change sorting order.

+ When you searching by date in Main window you can do not enter year if search current year date.

+ You can change day in date fields by "+" and "-" keys

- several small bugs fixed

Update package: www.dxsoft.com/aal3-upd.zip
Full setup package: www.dxsoft.com/aal3.zip

AALog is reviewed on eham.net <http://eham.net> (http://www.eham.net/reviews/detail/149 <http://www.eham.net/reviews/detail/149>). Your review on this forum would be gratefully appreicated. It would help the development of AALog further.

5779. SeaTTY 2.50 is released

Yahoo group: dxsoft
Date: 2015-01-13 19:40:56 UTC
From: Sergei Podstrigailo
Topic: 5779 Message: 5779

Hello All,

I just have uploaded SeaTTY 2.50 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

Your feedbacks are very welcome!

--
Best regards,
Sergei

==========
====

SeaTTY versions history

V2.50
The "Setup / Text / Add this comment to saved text files: ..." was made.
V2.45
The "Setup / Interface / Soundcard number / ... / Mono-Left-Right" option was made.
It allows to connect two signal source to one soundcard.

The "Setup / Interface / Nominal sampling rate " option was made.
The sampling rate can be 11025 (default), 22050, 44100 and 48000 samples per second.
This option can be useful to avoid soundcard driver bugs (some soundcard drivers work bad
at low sampling rates) or to connecting to digital sound source via virtual soundcard
without resampling.

The "Setup / Text / Put time stamps in saved text files" was made.
UTC or local date and time of message starting are added in a bottom
of saved message if this option is enabled.

V2.40
The documentation was updated.
A minor bug in the slant correction procedure was fixed.
V2.39
Previously received and saved HF-FAX image can be opened by
"Edit image" command of popup menu now. Then image can be fixed
by "<-||->" or "<-/|\->" operations and saved with the same or new name.
V2.38
Auto start/stop method in HF-FAX mode is rewritten.
V2.37
A command "File / Stop Decoding From File" was made.
A button "FastD" (fast decoding from file) was made.
V2.36

1000 Hz deviation is supported in HF-FAX mode now.
Minor bug with working frequency saving (if AFC is switched on) is fixed.
V2.35
Maximum number of RTTY/NAVTEX Station ID filter items is increased to 32.
Filter for GMDSS DSC message format was made.
Some minor improvements were made.

5785. SeaTTY - request

Yahoo group: dxsoft
Date: 2015-01-17 21:41:37 UTC
From: Richard Ware
Topic: 5785 Message: 5785

Sergei,

SeaTTY is an excellent program. I'm using it just for MF/HF/VHF DSC
and it is decoding more messages than the other two decoders that I am
running at the same time.

I have one more request...

SeaTTY compiles a daily Raw_Log message which can be time-stamped if required

Would it be possible to do this for decoded messages as well so that
there is one message (a daily log) containing all the decoded messages
for that day, in text format, rather than just many individual
messages? Having all the day's messages in one log would make it so
easy to search for a particular station.

As an example, here is a typical decoded message:

GMDSS DSC Message

Format: Selective call to an individual station (120)
To: 5380036470
Category: Safety
From: 0021910000
Telecommand1: Test (118)
Telecommand2: No information (126)
Frequency1: Unknown
Frequency2: Unknown
EOS (Ack. BQ)

17.01.2015 19:32:49 UTC
2187.5 Khz (ECC OK)

In the daily log, it could appear like this

To: 5380036470 Category: Safety. From: 0021910000: Test. No
information. Frequency1: Unknown. Frequency2: Unknown. EOS (Ack. BQ)
[19:32:49 UTC 2187.5Khz]

The next entry for the day would follow in a similar format

Can this be done?

Regards
Rich

I don't thing that it is job of SeaTTY :-)

If you want glue all daily message in a single file, just do it by Windows command processor.

Enter to a message folder and execute two commands like these:

```
===
echo . > 150117daily.txt

for %f in (150117-*.txt) do copy/b 150117daily.txt + %f
===
```

MODES LIST MANAGER

Hello some problems importing ADIF log from MIXW
Has to do with UPPER and LOWER cases of the MODE name
PACTOR or PACKET not reckonized in AALOG

ADIF mode seems not able to be changed in Configuration menu AALOG

From: D Visser
Topic: 5791 Message: 5793

Thanks for fast reply Alexander,

Problems now solved: I had to change the mode name in the configuration of AALog

The modes name and the ADIF mode MUST be the same in capitals

Problems were here with TOR (AMTOR) THRB (THROB) PAC (PACTOR) but now all is fine !

Thank You

David Visser

In the search window (F7) you need enter FULL search string or use * and ?
signs,
For example you have string "Search string" in Note field. If you enter
"Search" in search field you willget empty list. You need enter "Search*"
or "Search???????" to find you note.
Also you can use * and ? in the begining of the search string

5797. Cwtype and aatest

Yahoo group: dxsoft
Date: 2015-02-20 04:26:46 UTC
From: w5vol@...
Topic: 5797 Message: 5797

CwType works fine.
Aatest works fine.

But no Macros when I hit them?

Does CwType have to be started after aatest?
Should CWType not be started?
Do they need to be in same folder?
I have run them as administrator.
Type in call in aatest and hit return - no call shows in cwtpe, hit F5 to send call, nothing happens. Go to cwtype put in call hit F5 call is sent ok?

I don't want to have to enter call and reports twice? I know I have something wrong.

For Windows 7 what folders are these guys supposed to be in? Do i need to go to config file somewhere and change aalog.ini to aatest.ini??

Thanks, Joe

I kept getting same errors. I found when you download uncheck the update awards statistic and it goes ok. Then later go to menu and update all awards statistics works. It was very frustrating for a while.

wbnd> But no Macros when I hit them?

wbnd> Does CwType have to be started after aatest?
wbnd> Should CWType not be started?

Start it manually.

wbnd> Do they need to be in same folder?

No.

wbnd> I have run them as administrator.
wbnd> Type in call in aatest and hit return - no call shows in cwtpe, hit F5
wbnd> to send call, nothing happens. Go to cwtype put in call hit F5 call is sent ok?

wbnd> I don't want to have to enter call and reports twice? I know I have something wrong.

Just use ~[i...] and `[i...] macroses for AATest fields in CwType and
don't use CwType edit fields at all:

===
=== TrueTTY/CwType + AALog/AATest macros mini-FAQ start ===

~[iCall] correspondent callsign
~[iRprtSent] sent RST
~[isRprtSent] sent RST with CW substitutions (9/N , 0/T ...)
~[iRprtRcvd] received RST
~[isRprtRcvd] received RST with CW substitutions
~[iName]
~[iQTH]
~[iNumberSent] sent control number
~[isNumberSent] sent control number with CW substitutions
~[iNumberRcvd] received control number
~[isNumberRcvd] received control number with CW substitutions
~[iOldCall] previous QSO correspondent callsign
~[iOldRprtSent] previous QSO sent RST
~[isOldRprtSent] previous QSO sent RST with CW substitutions
~[iOldNumberSent] previous QSO sent control number
~[isOldNumberSent] previous QSO sent control number with CW substitutions
~[iVarNumberSent] variable part of sending control number
~[isVarNumberSent] variable part of sending control number with CW substitutions

~[imCall] correspondent callsign, if it was edited after control number macros
transmitting,
or empty text in another case. It works in AATest in CQ mode. Control number macros
is defined in "Config / Autosend setup /CQ mode /Answer macros" AATest settings.

`[iC1] The first correspondent callsignd symbol
`[iC2] 2-nd
`[iC3] 3-rd
`[iC4] 4-th
`[iC5] 5-th
`[iC6] 6-th and other symbols of callsign

In CW mode (AATest + CwType)
good method is represent correspondent callsign as
`[iC1]`[iC2]`[iC3]`[iC4]`[iC5]`[iC6]
In this case you can start transmission before full callsign is entered,
then continue to type rest of callsign.

In contests you need switch on MOX mode in TrueTTY/CwType,
at least "TX at keyboard press", to avoid problem with entering
two macros ending by `[rx].

New macros to save sound to a wave file (and replay) by TrueTTY or CwType+CwGet:

~[rpNN] - replay last NN seconds;
~[svNN] - save last NN seconds to wave-file;
~[svpNN] - save last NN seconds to wave-file and replay.

====

wbnd> For Windows 7 what folders are these guys supposed to be in? Do i need
wbnd> to go to config file somewhere and change aalog.ini to aatest.ini??

Don't change these setting!

5801. AALog 3.6.3 build 1190

Yahoo group: dxsoft
Date: 2015-02-21 06:32:14 UTC
From: Alexander Anipkin
Topic: 5801 Message: 5801

Hello

I just uploaded new version of AALog into websites

+ Set "Queued" status for all unanswered QSL (see Edit menu)
+ Set "Queued" status for all contacts with callsign that has at least one QSO queued (see Edit menu)
- fixed bug with "New one" message for open entities list awards (like WPX)
- when you select several QSOs in main window and changing QSL status AALog will set new status and current date (new) in the Global edit window.

Download it from:

New setup:
http://www.dxsoft.com/aal3.zip
http://www.hamport.com/aal3.zip

Update from previous versions:
http://www.dxsoft.com/aal3-upd.zip

Topic: 5797 Message: 5802

Thank you Alexander!

I used iCall instead of jCall and it started working.

Where do the iC1 and iC2 macros go - are they assigne to a function key! If in Mox I see how typing starts transmitting - but i don't see how assigning to function key works.

Also are there macros for character set for notes button - so if you need to insert some special info for a qso you could just start typing in notes box? It would be most convenient.

And perhaps one other problem I can't figure out when I hit save QSO button it sort of locks up the program for 10-15 seconds. Is there a save option or something that I could set for maybe every 5 minutes or is it running a lot of search and saves when I hit save QSO button. It is a long wait if trying to get to next QSO.
I used it for ARRL Dx this weekend 275,000 in my fourth contest. I am learning!

73's and thanks for aatest and aalog!

5803. Telnet problem

Yahoo group: dxsoft
Date: 2015-02-24 05:14:20 UTC
From: w5vol@...
Topic: 5803 Message: 5803

When i run aatest and then bandmaster (it is connected for example to K1TTT) so showing spots.
Then I have bandmap (I believe that is what it's called) and I hit telnet "connect" (it is set to default ve7cc connection) it starts reeling off page of page of spots during arrl dx cw contest. Then it locks up my pc totally. I found if I hit disconnect after 4-6 seconds it will stop and I can use list which is better than bandmap cause it puts asterisk on multipliers.
Do I have something set wrong? Is it just too much data for pc to handle? Anyway to set a max limit on download? It is really awesome but if pc has to reboot quite time consuming and scary about loosing data.
Thanks and 73's Joe, W5VOL

5804. cwget aalog linking

Topic: 5804 Message: 5804

Hve been using HRD but recently I've been trying cwtype and cwget along with a winkeyer and quite impressed. Now downloaded aalog with a view to an integrated system but all hell has broken loose. Cwget locks or crashes if I try and load thro aalog. Only way l've got it to work a bit is by starting the cw progs first and then starting aalog. The inter prog communications is clearly the problem but there doesn't seem to be an easy way to debug. Any hints or observations would be appreciated. G3XHB

5815. AALog 3.6.3.1190 problems

Yahoo group: dxsoft
Date: 2015-05-03 20:41:24 UTC
From: Dan Schaaf
Topic: 5815 Message: 5815

Hello all and Alexander

I have several problems with AALog. I am hoping to find help here. I have been using AALog since 2005.
I use AALog with Bandmaster.

Now, my problems:

1) When I click on a Bandmaster spot in the Spot List window, sometimes, many times, most times, it takes a long time for mode to change in AALog New QSO Window. Then it takes longer still for the correct call sign to be transferred to the New QSO window from Bandmaster. If there is a long list of spots in the Bandmaster Spot list, then the time increases for transfer of this info to AALog NEW QSO Window and sometimes AALog and Bandmaster lock up. Then I must wait and wait and wait.

2) When I shut down AALog I always get a message “RPC Server not available”. If I look in Windows Task manager, I see AALog still open and Bandmaster and Omni Rig also still open. I must always close AALog, Bandmaster and Omnirig using Task Manager.

3) There is a icon button on the NEW QSO screen for call sign lookup on INTERNET. This button does nothing. If I want to look up a call sign on the internet, I must click on the small internet icon next next to the call sign in the NEW QSO window.

AALog 2.47 never had these problems. But I am now running Windows 7 and I want the latest AALog running, so I must use the v3.6
I am also using Rig Control for FT-2000 .

Has anyone ever seen these 3 problems?

Best Regards
Dan Schaaf

Hello All,

I just have uploaded CwGet 2.30b to the main site and mirror:

http://www.dxsoft.com/cwgetb.zip
http://www.hamport.com/cwgetb.zip

V2.30
Options "Setup/Interface/Message channel" and "Setup/Interface/Exchange DLL channel"
were made. Them are useful in SO2R mode when several copies of CwGet are running.

The "Multi-channel decoder" window was completely rewritten.
Received by this decoder symbols are displayed directly at
a horizontal "waterfall".

A mouse click at this waterfall changes a frequency of the main decoder.

Some minor bugs were fixed.

--
Best regards,
Sergei

5820. Error after quit AALog

Yahoo group: dxsoft
Date: 2015-07-27 10:47:42 UTC
From: HA3LN
Topic: 5820 Message: 5820

Hi,

I got the following error message after I quit AALog.

http://ha3ln.hu/error.jpg

I assume there is some access privilege which is missing but after several re-install I cannot figure out what else I should change.

Does any one has any idea what is the root cause?

Anyway is this a serious issue or I can live with it?

Thanks and 73!

Csaba HA3LN

5825. CwType 2.20 is released

Yahoo group: dxsoft
Date: 2015-09-01 17:00:02 UTC
From: Sergei Podstrigailo
Topic: 5825 Message: 5825

Hello All,

I just have uploaded CwType 2.20 to the main site and mirror:

http://www.dxsoft.com/cwtype.zip
http://www.hamport.com/cwtype.zip

--
Best regards,
Sergei

==========

CwType Versions History

V2.20
The option "Setup / Interface / Message Channel" was made.
It is useful in SO2R mode when several copies of CwType and CwGet are running.
The option "Setup / Interface / Mox & Paddle / Send whole word omly" was made.
Inter-letter space (ILS) value can be changed with step of 0.25 dot now.
V2.10
A bug with configuration saving (if COM17...COM25 port is used) was fixed.
V2.01
A bug in the "Put Time Marks to a Capture File" option was fixed.
V2.0
Rig switching (SO2R support) works with WinKey interface now.
Options "Setup / Text / Put Time Marks to a Capture File" and
"Setup / Text / Use UTC Time" were made.

5827. SeaTTY Navtex

Yahoo group: dxsoft
Date: 2015-09-28 16:20:04 UTC
From: Chris Black
Topic: 5827 Message: 5827

Hi all, After many years of MW DXing with good sized antennas I am now in an antenna restricted location but have managed to sneak in a Wellbrook loop and a couple of long wires. Although I did some utilities a long time ago, I am pretty rusty. Just got SeaTTY and have a few questions which I am sure you Gurus will be able to answer. Am using an Elad SDR.

Left radio on all night on 518 but didn’t get anything. I see the two long red lines jumping around and the two short ones centered on 1700.

NORMAL - how to set and when/why change
AFC local deviation - ?
AFC global deviation - ?

AFC on or off -- probably ON?
SQL on or off and what number (default is 50 but not sure what that means)
Sampling rates?

I am using CW mode, which I recall works best for data modes.

Also just curious where does the 1,700 for center frequency (default sub-carrier) come from? is that SITOR B specific?

Any other tip, tricks or comments MOST appreciated.

Chris Black

You need to hear signal from receiver speaker
and see two signal peak in spectrogram window at first...

CBncnd> NORMAL - how to set and when/why change

For NAVTEX use NORMAL if you use USB in receiver,
use REVERSE if you use LSB.

CBncnd> AFC local deviation - ?
CBncnd> AFC global deviation - ?

CBncnd> AFC on or off -- probably ON?
CBncnd> SQL on or off and what number (default is 50 but not sure what that means)

In NAVTEX mode is not reason to switch squelch (SQL) ON ,
because signal has error control an so you don't get many
garbage letters from noise.

CBncnd> Sampling rates?

CBncnd> I am using CW mode, which I recall works best for data modes.

You need take to attention which sideband (USB or LSB)
is used in CW mode.

CBncnd> Also just curious where does the 1,700 for center frequency (default
CBncnd> sub-carrier) come from?

It is not subcarrier, it is signal shifted to audio frequency.

So it should be a central frequence of your audio filter.

So if you want receive signal at 518 kHz you need tune
USB receiver at 518-1.7=516.3 kHz or
LSB receiver at 518+1.7=519.7 kHz

In CW mode receiver shows radio frequency, so you don't need add offset,
but need to move SeaTTY vertical red lines to a central audio frequency of your receiver
(probably about 1000 Hz)

Thank you for all that but still very confused.

In CW mode receiver shows radio frequency, so you don't need add offset,
but need to move SeaTTY vertical red lines to a central audio frequency
of your receiver
(probably about 1000 Hz)

Have no idea what this means. In one place you talk about a sub-carrier of 1,700 (don’t know what this is) and now you talk about 1,000 and a central audio frequency. What is this and why does it matter and how would I find out anyway??
All I know is:

1) I tune my Elad SDR to 518 CW
2) I open SeaTTY
3) I see no decoding on the software. I sometimes see the blue trace barely peek over the bottom line but that's it

CBncnd> out anyway??

NAVTEX signal has not subcarrier. It is FSK (frequency shift keying) radio signal.
In any moment transmitter send radio signal with frequency 518+0.1 Khz or 518-0.1 kHz.

You should know as SSB/CW receiver works.

Simply speaking, it move radio spectrum to audio band.

If you have radio signal with frequency 518 kHz and tune USB receiver to 517 kHZ ,
you will hear tone 1000 Hz

If you tone USB receiver to 516 kHz, you hear tone 2000 Hz.

CW received works in the same way, but frequency scale and filter bandwidth has offset,
sou you hear nominal audio frequency (usually about 1000 Hz) when receiver is tuning
to nominal radio frequency (518 kHz in our case).

CBncnd> 1) I tune my Elad SDR to 518 CW
CBncnd> 2) I open SeaTTY
CBncnd> 3) I see no decoding on the software. I sometimes see the blue trace barely
CBncnd> peek over the bottom line but that's it

You skipped one step - you need to feed audio signal from SDR output
to SeaTTY input.

Does your SDR use computer soundcard to output ?

If yes, you need

- another souncard for Seatty connected to first by wire (and selected in SeaTTY settings).
or
- setup single soundcard recording input to "what you hear" output.

From: Chris Black
Topic: 5827 Message: 5832

Sergei,
I tried to reply and show screen shot that everything is working fine but all commands are grayed out so cannot? Anyway, I have figured it out. All this about 1,000 or 1,500 or 1,700 or whatever doesn't have anything to do with anything and was driving me crazy, as I am not very technical.

All I do is tune 518 CW. If my CW bandwidth is 400 Hz wide and my CW pitch is set to 700, then I will see the blue trace 400 Hz wide centered around 700 on your scale. When I see the Navtex peaks, then I click. End of story. If I change my CW pitch the the blue trace will center around the new setting.

Now another issue: Just using my Elad SDR software on an MW signal, the volume has no effect on the signal level. When I use your program and select default sound card, the level of your signal changes with audio volume adjustment so I must have audio at all times which could be a problem for overnight recording.

Wondering what solutions are available.

Best de Chris

5833. Seatty levels

Yahoo group: dxsoft
Date: 2015-10-02 01:38:26 UTC
From: Chris Black
Topic: 5833 Message: 5833

With my Elad SDR and HDSDR I can monitor a station and reduce the audio volume without affecting the signal level. With SeaTTY, the only setup option available was the default sound card, however the gain is a function of the volume. Muting the audio mutes the signal. Obviously leaving the audio going all night is not going to win friends and influence people!

any ideas for solutions most appreciated.

Chris

I don't know if this is any help but on my laptop (A Samsung RV520) there are in effect two speaker controls. The first one, and the obvious one, is the speaker icon in the bottom right of the screen, which can be toggled on or off by pressing the Fn and F6 keys. Obviously that will mute ALL sound.

To just mute the sound from whatever you're feeding seaTTY with, have you got some sort of Audio Manager on your computer?. I have Realtek HD Audio Manager.
If I open that up I can see the recording and playback controls for the microphone input, which is what I'm using. All I need to do is to mute the microphone playback. The main speakers will still work OK but you won't hear the noise from the microphone input.

I have attached a jpg to illustrate what I mean. You need to click where I've indicated. Make sure the 'Playback volume' button is muted with a cross. Hopefully Yahoo allow attachments on this group. If not then you'll get a message saying "non-text portions of this message have been removed", there'll be no attachment and it'll have been a waste of time

Regards
Rich

5841. Sound Switch

Yahoo group: dxsoft
Date: 2015-10-04 14:14:06 UTC
From: Frederick R. Vobbe
Topic: 5841 Message: 5841

Question for the group. I use CWType, CWget, and TrueTTY on my PC. I also use the same PC for listening to podcasts, which presents a problem.

To listen to podcasts I have to go to Control_Panel/Hardware_&_Sound/Sound and set everything so it plays out my speaker.

Then when I want to operate I have to go back and set everything up differently to operate with my SignaLink USB.

Has anyone seen a small utility which can reside on the desktop which gives two choices of audio settings? Sort of a macro which would switch between the two configurations?

Fred/W8HDU

I prefer Power Mixer by http://www.actualsolution.com/

But I don't understand what is your problem.
You can set your general soundcard as default windows soundcard,

and select Signalink USB as input/output soundcard in CwGet and TrueTTY.

I'll look at Power Mixer.

If I use the SignaLink to interface to my radio, and also want to use a pair of speakers to play podcasts, in the sounds setting they are two different configurations.

For audio out, the speakers are the Realtek "Speaker/Headphone" setting, while the SignaLink is looking for its transmit signal on the Realtek "High Definition" buss. Two different paths.

Same applies for the audio input.

My options are to come up with an easy way to switch between the two settings, or uninstall on another PC.

If I try to play an MP3 when in the configuration for the SignaLink I don't hear anything on the speakers, and the SignaLink's relay rattles with the sound of the MP3.

It's just the way this machine is set up.

Fred

From: Alexander Anipkin
Topic: 5848 Message: 5848

Hello

Just uploaded new version of AATest. Bug reports and suggestion are welcomed!

+ new algorythm for communication with cluster.
+ New columns added in the BandMap window (time of spot, owner, direction to spot) Click on column header to sort.
+ you can lock spot from deletion, can show/hide spots from RBN in the Bandmap window (only filter, spots still collecting)
+ right-click in the Bandmap window show possible function
+ autologon after connect to telnet cluster
- cty.dat is CT9 compatible now

www.dxsoft.com/aatest.zip
www.hamport.com/aatest.zip

5849. Thanks for SeaTTY

Yahoo group: dxsoft
Date: 2015-12-03 23:31:39 UTC
From: WSMurdoch@...
Topic: 5849 Message: 5849

I have been using SeaTTY for seven or eight years now on a sailboat, first with an Icom R75 SW receiver and now with an Icom IC-m710 marine transceiver.

SeaTTY has been perfect. My wife and I spend the winter and spring in the Bahamas (www.irish-eyes-to-the-bahamas.blogspot.com) and rely on SeaTTY HF Fax and Miami NAVTEX weather for the "big picture weather" when we are without internet access. It works like a charm. I would not be without it.

I have changed from using the soundcard in a laptop computer to using a SignaLink external sound card
(needed for Winlink/Winmor/RMS email with the IC-m710) and have to report that the SignaLink seems to work better than the internal soundcard in a HP dv6000 or an ASUS F200CA computer (but that is just opinion; I don't have real numerical data). With the internal sound cards I have used both attenuation and straight cables. The difference is small. Either is perfectly satisfactory.

You have a great product. Keep up the good work!

5855. AALog 1196 locks up

Yahoo group: dxsoft
Date: 2016-02-13 12:41:53 UTC
From: dan-schaaf@...
Topic: 5855 Message: 5855

Hi all
I have been using AALog for many years and now build 1196 is locking up when there are too many cluster spots listed in Bandmaster. As a result, Bandmaster also locks up since the two apps are linked (Use Bandmaster in Options/External Programs) . So, I must use Windows 7 Task Manager to close AALog first. Then Bandmaster begins to work OK all alone. Then I must Close Bandmaster and OmniRig using Task Manager and restart AAlog again.

Has anyone seen this kind of problem. It is a recent problem.

I am wondering if there is a corrupted AALog.GDB Log file that is causing this problem.

It is very very frustrating when i go to make a log entry and New QSO window says Not Responding in the Title Bar due to lockup.

Thanks for any help on this
If possible also copy me directly at dan-schaaf@att.net

Dan K3ZXL

5856. AALog 1196

Yahoo group: dxsoft
Date: 2016-02-08 21:17:36 UTC
From: Dan Schaaf
Topic: 5856 Message: 5856

Dear Alan

First, please reply to me directly at dan-schaaf@... in case you read this in Yahoo Groups.

I was using the 1168 successfully and then decided to upgrade to 1196.

With 1168, I could have open on screen both Main Log window and NEW QSO window and the active window (Title Bar = BLUE) could be either Main Window or New QSO Window.

Now, with 1196, New QSO Window is Blue Title bar (active Window) always. If I mouse click on Title Bar in Main Window, the Active window immediately switches to New QSO Window.

The consequence is that while the New QSO window is OPEN, I cannot access the features of the Main Window such as EDIT or FILE or CONFIG or any features, because immediately the New QSO window becomes active.

New QSO window takes control.

So now, if I wish to access Main Log Window features, I must first close the New QSO window.

I have never seen this happen in previous revisions.

Is there a solution ???

I have copied ini and GDB files to Desktop, uninstalled 1196, re-installed 1196 and copied ini and GDB files back into AALOG3 Directory. Re-install did not fix this problem.

The PC is ACER Aspire mini-tower. Win 7 Latest updates

I do not have this problem on my Compaq Presario notebook PC. Win 7 latest updates

Best Regards
Dan Schaaf

5857. Number of useable soundcards much too small (10)

Yahoo group: dxsoft
Date: 2016-02-26 10:20:00 UTC
From: dh2id@...
Topic: 5857 Message: 5857

I am licenced for TrueTTY, SeaTTY, CWGet and I also use CWType.

All these programs are the best you can get.

What is very sad is that I, and a lot of other OM I know, cannot use these programs anymore, as we have more soundcards than the maximum useable 10 in your programs.

We have arrived in the new world of SDR (Software Defined Radios) !
These radios use and need a lot of virtual audio cables and sondcards.

I have 20 of them on my ham pc ! And I need - of course - number 20 !!!!

PLEASE CHANGE YOUR SETTINGS TO A MAXIMUM OF 30 (OR UNLIMITED) SOUNDCARDS!

That cannot be very difficult to program.

73, Alex DH2ID

SOvscd> Hello,
SOvscd> I need help with the settings to configure CWType with Omnirig and SignaLink with TS-590 and LOG4OM.
SOvscd> Cannot find the working configuration/ports.

1. CW-manipulation via Omni-Rig is "temporary last-resort workaround",
should be used only till you buy or build right interface.

2. Signalink has not CW-key switch at all, so it can't be used for native CW manipulation.

3. As another workaround you can send CW in SSB mode, use tone signal
generated by CwType via Signalink soundcard. But I'd suggest to use more appropriate
CW-interface.

5861. TrueTTY Problem

Yahoo group: dxsoft
Date: 2016-02-27 12:07:52 UTC
From: Dan Schaaf
Topic: 5861 Message: 5861

Dear Sergei
Please see attached image.
I have been using TrueTTY with and without AALog since 2005. A few years ago I changed computer from Presario with Win XP to Acer with Win 7
I have AALog set Config/Options/External Programs/Use TrueTTY/When Relevant Mode is selected
Since that time, When I enter RTTY or PSK into AAlog New QSO window, TrueTTY comes on screen but TrueTTY Window does not complete. It is frozen. Cannot use it.

Presently I must open it standalone and not Use with AALog.

Alex Anipkin told me to right click on TrueTTY in Taskbar or on Titlebar of program. This also does not solve the problem.

This problem does not happen on my Compaq Notebook PC. Only on Acer. I have uninstalled and then reinstalled the program but no change. I do initially run as administrator after install.

Standalone, TrueTTY is OK. Problem is only when TrueTTY is called by AALog.

How can I fix this?

Best Regards
Dan Schaaf

Yes, we know about this problem, but can't find reason of it.
Probably it is sometimes in Borland runtime or in Windows driver.

Soundcard drivers was reason of a lot "strange problems",
sometimes videocard driver was reason of a problem too ...

5865. AALog 3.7 Build 1200

Yahoo group: dxsoft
Date: 2016-02-28 11:59:47 UTC
From: Alexander Anipkin
Topic: 5865 Message: 5865

Hello

I just uploaded new version of AALog into websites

Attention!!!

Make a backup of your database (AAlog.GDB file) before you proceed!
When you install the update package, first AALog will start up very long.
It's because AALog performs major modifications on your database.
If you are RDA hunter you need to update list from Refs folder (remove old references list first and next rescan RDA award in the Awards manager window)

Updates:

- Internet search window, QRZ.RU tab. AALog searches for main call (without the portable extension)
+ in all contacts lists it is possible to do group edit QSL status
+ added sorting option for State and Subdiv
- QSL service window. AALog saves sorting settings
- QSL service window. AALog saves QSL messages
+ QSL service window. New sort type by Main prefix. Useful for countries with regional QSL buros. AALog also use QSL manager call (if not empty) for this field.
- QSL service window. Shortcut Ctrl+P added to call print dialog
- Internet search window. Fixed 425DXN issue
- Search window (F7). Option "Use partial search" added. If checked AALog searching this substring. If not - full match to the search field including wildcards ('*' or '?').
+ New QSO information field was added - "Type of propagation"
- Bandmap window. When you click on a spot, AALog turns off split on TRX
- Log manager window. If filter by log srt is selected AALog uses this Log set as default value when you click button "New"
- Import window. Added message when import is completed
- Export window. Added message when export completed
- Changed text of checkboxes in the import window
- Shortcut Alt+U to move cursor to Subdiv field in the all windows
- Edit QSO. Shortcuts (Alt+1 .. Alt+6) for tabs are added
- in all contacts lists you can copy information about selected contacts into clipboard
+ Search window (F7). If no search results, focus moving into search fiels and all text are selected.
- Internet search window, DXSummit tab. By default current year are displayed in the 'Year' field
- New QSO window. Wrong 'New one + award' message fixed
+ Export window. If no extension is specified for ADIF export AALog adds

'.ADI'
- fixed sorting by Main Prefix in the contacts lists
- export to ADIF. Wrong value of LOTW_QSL_SENT fixed
+ Bandmap window. Ctrl+PgUp, Ctrl+PgDn keys changing the band. 'Enter' key moves focus to New QSO window and sets spot data in the fields only if New QSO window IS OPEN. 'Ctrl+Enter' key OPEN New QSO window, moves focus and sest spot data in the fields.

Download it from:

New setup:
http://www.dxsoft.com/aal3.zip
http://www.hamport.com/aal3.zip

Update from previous versions:

Subject: [dxsoft] AALog 3.7 Build 1200

Hello

I just uploaded new version of AALog into websites

Attention!!!

Make a backup of your database (AAlog.GDB file) before you proceed!
When you install the update package, first AALog will start up very long. It's because AALog performs major modifications on your database.
If you are RDA hunter you need to update list from Refs folder (remove old references list first and next rescan RDA award in the Awards manager window)

Updates:

- Internet search window, QRZ.RU tab. AALog searches for main call (without the portable extension)
+ in all contacts lists it is possible to do group edit QSL status
+ added sorting option for State and Subdiv
- QSL service window. AALog saves sorting settings
- QSL service window. AALog saves QSL messages
+ QSL service window. New sort type by Main prefix. Useful for countries with regional QSL buros. AALog also use QSL manager call (if not empty) for this field.

- QSL service window. Shortcut Ctrl+P added to call print dialog
- Internet search window. Fixed 425DXN issue
- Search window (F7). Option "Use partial search" added. If checked AALog searching this substring. If not - full match to the search field including wildcards ('*' or '?').
+ New QSO information field was added - "Type of propagation"
- Bandmap window. When you click on a spot, AALog turns off split on TRX
- Log manager window. If filter by log srt is selected AALog uses this Log set as default value when you click button "New"
- Import window. Added message when import is completed
- Export window. Added message when export completed
- Changed text of checkboxes in the import window
- Shortcut Alt+U to move cursor to Subdiv field in the all windows
- Edit QSO. Shortcuts (Alt+1 .. Alt+6) for tabs are added
- in all contacts lists you can copy information about selected contacts into clipboard
+ Search window (F7). If no search results, focus moving into search fiels and all text are selected.
- Internet search window, DXSummit tab. By default current year are displayed in the 'Year' field
- New QSO window. Wrong 'New one + award' message fixed
+ Export window. If no extension is specified for ADIF export AALog adds '.ADI'
- fixed sorting by Main Prefix in the contacts lists
- export to ADIF. Wrong value of LOTW_QSL_SENT fixed
+ Bandmap window. Ctrl+PgUp, Ctrl+PgDn keys changing the band. 'Enter' key moves focus to New QSO window and sets spot data in the fields only if New QSO window IS OPEN.
'Ctrl+Enter' key OPEN New QSO window, moves focus and sest spot data in the fields.

Download it from:

New setup:
http://www.dxsoft.com/aal3.zip

There is still a big glitch in Aalog. It is modifing the prefix/entity list as it is in DXCC you can do it but it is too complicated. For example if you want to change entitiy/prefix old TX0 qsos to FK/C you must do it changing all QSOs one by one. Prefixes are changing all the time so there must be easier way to change country status of the qsos.

Yes I mean that. For example if I have worked TO3E orTX3X 15 times I must change the DXCC entity from France or Unknown 15 times one by one to Juan da Nova FR/J or Chesterfield Is FK/C. The same thing if I have worked KA1NC 10 times I must change all qsos one by one to Minami Thorshima JD/M. I hope you understand what I mean. So I hope that there is the way I can change all those qsos in group not one by one.

I have never had that problem. One time naming the DXCC entity covers all future for that call sign.

Maybe something new problem in latest version 1200 ?

Best Regards
Dan Schaaf

From: Frederick R. Vobbe
Topic: 5872 Message: 5872

Can AALog be installed and a database imported before registration and paying for the program?

I’ve been thinking about switching from LogEQF to AAlog since I use other programs from DXsoft.

I would just like to be sure it imports my log before purchase.

I can give AAlog ASCII (commas), Tabular ASCII, dBase III or IV, or ADIF standard (LoTW)

Fred, W8HDU

Hello, Fred

You can install AALog freely an use it 45 days before buy. No limitation
during this period. AALog can import ADIF or Cabrillo formats.

Yes I mean that. For example if I have worked TO3E orTX3X 15 times I must change the DXCC entity from France or Unknown 15 times one by one to Juan da Nova FR/J or Chesterfield Is FK/C. The same thing if I have worked KA1NC 10 times I must change all qsos one by one to Minami Thorshima JD/M. I hope you understand what I mean. So I hope that there is the way I can change all those qsos in group not one by one.

2016-02-28 18:02 GMT+03:00 Juhani Viitala oh3sr@... [dxsoft] <dxsoft@yahoogroups.com>:

There is still a big glitch in Aalog. It is modifing the prefix/entity list as it is in DXCC you can do it but it is too complicated. For example if you want to change entitiy/prefix old TX0 qsos to FK/C you must do it changing all QSOs one by one. Prefixes are changing all the time so there must be easier way to change country status of the qsos.

73 John OH3SR

28.2.2016, 13.59, Alexander Anipkin alan@...t.com [dxsoft] kirjoitti:

Hello

I just uploaded new version of AALog into websites

Attention!!!

Make a backup of your database (AAlog.GDB file) before you proceed!
When you install the update package, first AALog will start up very long. It's because AALog performs major modifications on your database.
If you are RDA hunter you need to update list from Refs folder (remove old references list first and next rescan RDA award in the Awards manager window)

Updates:

- Internet search window, QRZ.RU tab. AALog searches for main call (without the portable extension)
+ in all contacts lists it is possible to do group edit QSL status
+ added sorting option for State and Subdiv
- QSL service window. AALog saves sorting settings
- QSL service window. AALog saves QSL messages
+ QSL service window. New sort type by Main prefix. Useful for countries with regional QSL buros. AALog also use QSL manager call (if not empty) for this field.

- QSL service window. Shortcut Ctrl+P added to call print dialog
- Internet search window. Fixed 425DXN issue
- Search window (F7). Option "Use partial search" added. If checked AALog searching this substring. If not - full match to the search field including wildcards ('*' or '?').
+ New QSO information field was added - "Type of propagation"
- Bandmap window. When you click on a spot, AALog turns off split on TRX
- Log manager window. If filter by log srt is selected AALog uses this Log set as default value when you click button "New"
- Import window. Added message when import is completed
- Export window. Added message when export completed
- Changed text of checkboxes in the import window
- Shortcut Alt+U to move cursor to Subdiv field in the all windows
- Edit QSO. Shortcuts (Alt+1 .. Alt+6) for tabs are added
- in all contacts lists you can copy information about selected contacts into clipboard
+ Search window (F7). If no search results, focus moving into search fiels and all text are selected.
- Internet search window, DXSummit tab. By default current year are displayed in the 'Year' field
- New QSO window. Wrong 'New one + award' message fixed
+ Export window. If no extension is specified for ADIF export AALog adds '.ADI'
- fixed sorting by Main Prefix in the contacts lists
- export to ADIF. Wrong value of LOTW_QSL_SENT fixed
+ Bandmap window. Ctrl+PgUp, Ctrl+PgDn keys changing the band. 'Enter' key moves focus to New QSO window and sets spot data in the fields only if New QSO window IS OPEN.
'Ctrl+Enter' key OPEN New QSO window, moves focus and sest spot data in the fields.

Download it from:

New setup:

Thanks. I installed it tonight, and I'm pretty sure all entries copied in. The number of QSOs in LogEQF match what AALog has.

When I start the program and hit F3, it will want me to load "default.log". Is there a way I can rename it to W8HDU.log or is it hard coded for "default"?

For that matter, where does default.log reside on the local machine? When I installed the program it defaulted to c:\AALog3 on my local machine.

Thanks again for the help. Now comes the hard part of getting the QRZ logbook set back up again, as well as the station controls.

I've been thinking about switching from LogEQF to AAlog since I use other programs from DXsoft.

I would just like to be sure it imports my log before purchase.

I can give AAlog ASCII (commas), Tabular ASCII, dBase III or IV, or ADIF standard (LoTW)

Hello

Well, do you use group edit?
Select one qso with TX3X, press ctrl-Q, in this window Ctrl+A, then press
F4 and select correct country. In current version I found problems only you
set non-ADIF entry

5882. RE: [dxsoft] AALog Installation

Yahoo group: dxsoft
Date: 2016-03-03 00:58:00 UTC
From: Frederick R. Vobbe
Topic: 5872 Message: 5882

Good evening/morning Alex,

OK. Log was successfully imported, and I received my license key so I'm up and running. I do have two questions concerning interfacing.

First, I have a Yaesu FT897D which has a connection from the radio to the PC. When I opened the New QSO dialog box on WinEQF it would automatically put in the frequency and mode. Does AALog have a similar feature which I can set up?

Second, I have a QRZ.COM subscription for the logbook. I was able to get it set up so when I when I select NEW QSO and type in a call sign, a box pops up to the left with the contact's address. Does the address data and hopefully the Freq/Mode get entered into the log when clicking on

The SAVE button?

On question 2 I guess I'm a little confused as to the workflow and progression of events.

Fred/W8HDU

Hello

Default log is name only. You can change it anytime. Also you can create other logs if you need.

All logs (and not only logs) are in the same file aalog.gdb. To have backup of your data just copy this file. Moreover you can put AALog folder to flash drive and use it on any PC.

One note. Group edit is a "cheat" operation. If you use it to change some fields which using for awards, you need to rescan this award statistic (in your case DXCC/WAZ/ITU) in awards manager.

From: Kopachevskyy Vladislav
Topic: 5876 Message: 5884

Hello,

Latest version AAlog 3.7.0.1200 with Windovs 10 works so far without problems.

Good luck! 73!
Vladislav "Slava" /UY2ZZ/

Тема: [dxsoft] Windows 10?

Hello,
Is AALog fully compatible with Windows 10? Works as under Windows 8?

Yes i saw that. Now all of my statics is up to date except:

WB2POJ/VQ9=VQ9 Chagos Is (QSO 23.07.1970)
I have not found the way how to change the right entity Chagos it always goes back to Farquhar.

5886. ADIF import limitation?

Yahoo group: dxsoft
Date: 2016-03-03 09:12:44 UTC
From: Zoltán Bordás
Topic: 5886 Message: 5886

I tried to import a log in ADIF format cosisting of about 44.000 QSOs.
Around 34.000 QSOs imported I got an error message "Out of memory" and the program freezed. Happened two times.

Is there some limit of the log to import?

(HP Probook 4540s, i3@2.4 GHz, 4 GB RAM, Windows 8.1 Pro, the .adi log is 13 MB)

---

Topic: 5886 Message: 5887

Limitation is only memory of PC. If you get error on 34000, then try to import no more then 30 000 in single file.

Will fix this issue in the next version.

Hello

To communicate with TRX AALog use OmniRig. You can download and use it free
http://www.dxatlas.com/OmniRig/Files/OmniRig.zip

Right now AALog do not get data from internet sources automatically. It
feature is in the "to do list".

Topic: 5857 Message: 5890

Thank you, Sergei, that works very well with all my soundcards.
Now if you have time to change that for the other programs ;-)
SeaTTY, CWGet, CWType have the same sondcard limitation ...

5891. AALog 3.7.1 Build 1203

Yahoo group: dxsoft
Date: 2016-03-10 07:24:19 UTC
From: Alexander Anipkin
Topic: 5891 Message: 5891

Hello

I just uploaded new version of AALog into websites

Attention!!!

Make a backup of your database (AAlog.GDB file) before you proceed!

- ADIF import fixed. You can import very big files now
- fixed bug with ADIF export of LOTW and EQSL.CC statuses
- fixed multiply VQ9 prefixes in the prefix list for old contacts (in 1970s)
- small interface bugs fixed.
- fixed bug for some Yeasu TRX. When you clicked on the spot in the Bandmap window TRX switches split ON.

Download it from:

New setup:
http://www.dxsoft.com/aal3.zip
http://www.hamport.com/aal3.zip

Update from previous versions:
http://www.dxsoft.com/aal3-upd.zip
http://www.hamport.com/aal3-upd.zip
--
Best regards

Alexander Anipkin

I am very satisfied now. All of my Aalog problems solved now with ver. 1204

For the wish list: Voice announcement if there shows up a new country,
new band or mode in the cluster so you don't need to watch the screen
all the time but you can do something else in the shack.

My opinion is Aalog, TrueTTY, CwType with Omnirig is the best
combination for controling your station. I also use AaVoice on SSB. I
have compared that system with DX4WIN, HRD, MMTTY and Fidigi.

I am still learning to use AaTest

5895. Re: [dxsoft] AALog 3.7.1 Build 1203

Yahoo group: dxsoft
Date: 2016-03-10 11:36:24 UTC
From: Dan Schaaf
Topic: 5891 Message: 5895

Dear Alex

you said : << - fixed bug for some Yeasu TRX. When you clicked on the spot in the Bandmap window TRX switches split ON. >>

In my FT-2000, typically if I click on a BM SPLIT spot, the radio goes to split with offset. Is it still OK in this new release ?

Best Regards
Dan Schaaf

Hello

I just uploaded new version of AALog into websites

Attention!!!

Make a backup of your database (AAlog.GDB file) before you proceed!

- ADIF import fixed. You can import very big files now
- fixed bug with ADIF export of LOTW and EQSL.CC statuses
- fixed multiply VQ9 prefixes in the prefix list for old contacts (in 1970s)
- small interface bugs fixed.
- fixed bug for some Yeasu TRX. When you clicked on the spot in the Bandmap window TRX switches split ON.

Download it from:

New setup:
http://www.dxsoft.com/aal3.zip
http://www.hamport.com/aal3.zip

Update from previous versions:

http://www.dxsoft.com/aal3-upd.zip
http://www.hamport.com/aal3-upd.zip

It's possible error in ft-2000.ini

Instead

[pmSplitOff]
Command=(FR0;FT0;)

Try
[pmSplitOff]
Command=(FR0;FT2;)

Alex
I think it is probably OK. My FT2000 is at Yaesu for repair so I cannot check it now. But the split was OK before it went to Yaesu. And the Omnirig FT2000 ini is OK according to
[pmSplitOff]
Command=(FR0;FT2;)

So, I think no worries. I did not realize that you originally were speaking about AALog Cluster .

Alex,
I downloaded latest ver 2.0.21 but I have a problem.
The program does not store character fonts, so at every start I have to set the fonts again for Calls and exchange number.
Version 2.0.5 was perfect but I have deleted the .zip file
You can tell me where I can download the old version 2.0.5 ?

Александр добрый день. Отработал в Russiian Dx Contest

При работе наблюдал: Работаю в основном на поиск Rx SDR Afedri + CwSkimmer что то вроде дом кластера. На бэнд мапе реально слышимые ст.в моем Qth. Tx Icom-736. Aferi+CwSkimmer работают в паре классно Да вот выбирать ст. на бэмд мапе Alt(правый) + стрелки, моими кортышками пальцами, скажу я вам, ну очень не комфортно. (кисть левой руки не работает). Мое прдложение, сделать навигацию стрелками вверх-вниз без Alt. На сегодня многие используют при работе в тестах SDR RX + CwSkimmer. Можно обьеденит два потока инфо, от Dx кластера+ CwSkimmer на бенд мап. Будет море инфо. Добавить отправку Qso по окончания теста в Lotw и eQSl

С уважением Юрий

As I recall, Alexander must update the software database and send out a revision. Maybe soon. It is more important to update the software when a new country is added. More important than when one is deleted.

Well

go to Config - Awards List menu
In the list select dxcc and press edit
Click icon near "Closed references list"
Find KH5K. Press Edit. Set checkbox "Deleted" and press "Save"
You will have only 339 Countries in the DXCC list

I will change prefix list this week end

5912. Re: [dxsoft] New problem

Yahoo group: dxsoft
Date: 2016-03-31 18:33:43 UTC
From: Juhani Viitala
Topic: 5906 Message: 5912

Thanks the problem solved it wasn't Kingman but strange -1 DXCC country
(4j1FS).

5913. AALog coding

Yahoo group: dxsoft
Date: 2016-03-31 22:04:57 UTC
From: Frederick Vobbe (Mobile)
Topic: 5913 Message: 5913

I would like to make a suggestion on the program. Should they be posted here, or directed to someone off list?

Sent from Fred's Verizon 4G LTE Droid
On Mar 31, 2016 2:33 PM, "Juhani Viitala oh3sr@sral.fi [dxsoft]" <dxsoft@yahoogroups.com> wrote:

John OH3SR

31.3.2016, 20.46, Alexander Anipkin alan@g.dxsoft.com [dxsoft] kirjoitti:

Well

go to Config - Awards List menu

In the list select dxcc and press edit

Click icon near "Closed references list"

Find KH5K. Press Edit. Set checkbox "Deleted" and press "Save"

You will have only 339 Countries in the DXCC list

I will change prefix list this week end

It seems that Alexander who is developing all DXsofts is reading this
site or group all the time. So I guess this is the good way to do it.

5916. Re: [dxsoft] AALog coding

Yahoo group: dxsoft
Date: 2016-04-01 12:37:18 UTC
From: Frederick R. Vobbe (mobile)
Topic: 5913 Message: 5916

First of all, if this is already implemented in AALog, then please ignore. I'm still learning the subtleties of the software and may have overlooked this.

I subscribe to the QRZ.COM XML database service. The logging problem I used before AALog was WinEQF. It had a handy feature which was automatic fill-in of the log. For example; if I worked station AA8LOG, and typed that into the callsign portion, it would take the XML data and fill in the rest of the fields with QTH, zone, grid, etc. For someone like myself, who has eyesight problems and struggles with looking at one screen any copying data to another, it would really help.

I realize I'm in the minority with this request, but I'm reluctant to completely drop WinEQF because of the automatic fill-in feature.

Fred Vobbe, W8HDU

5917. CwGet 2.37 is released

Yahoo group: dxsoft
Date: 2016-04-11 20:53:33 UTC
From: Sergei Podstrigailo
Topic: 5917 Message: 5917

Hello All,

I just have uploaded CwGet 2.37 to the main site and mirror:

http://www.dxsoft.com/cwget.zip
http://www.hamport.com/cwget.zip

--
Best regards,
Sergei

==========

CwGet Versions History

V2.37
Input and output soundcard numbers can be above ten now.
V2.36
Minor bug with message channel handling was fixed.
V2.35
Documentation was updated.
Minor improvement in multi-channel decoder were made.
V2.30
Options "Setup/Interface/Message channel" and "Setup/Interface/Exchange DLL channel"
were made. Them are useful in SO2R mode when several copies of CwGet are running.
The "Multi-channel decoder" window was completely rewritten.
Received by this decoder symbols are displayed directly at
a horizontal "waterfall".
A mouse click at this waterfall changes a frequency of the main decoder.
Some minor bugs were fixed.
V2.26
The "Setup/Interface/Output soundcard channel" option (Mono/Left/Right) can be used
to select output channel of soundcard.
[...]

5918. CTRL + TAB bug

Yahoo group: dxsoft
Date: 2016-04-28 08:43:37 UTC
From: HA3LN
Topic: 5918 Message: 5918

Hi Alex,

Sorry to spam the list here but I don't know where I could report this bug.

If I open up the "Award Manager" window, to check the related QSOs for a given DXCC
the window disappears from the CTRL+TAB option, therefore I cannot change the window.

This does not appaer any other window in AALog. ("Search for Contacts", etc).

I know this has very low prio but as a heavy keyboard user it's can be important.
:-))

Thanks in advance.

73!
Csaba HA3LN

From: Alexander Anipkin
Topic: 5920 Message: 5921

Hello

AAlog can get eQSL confirmation. To downlod they go to Files - Import - eQSL.cc
Enter call and password

To put your eQSL to server use adif import from aalog

5922. SeaTTY in DSC mode- significance of the letter D and R

Yahoo group: dxsoft
Date: 2016-07-19 20:06:59 UTC
From: Richard Ware
Topic: 5922 Message: 5922

This is a typical HF DSC message received on 8Mc/s

111r 110r 109r 125d 125d 125d 125d 104r 120r 120r 0r 50d 30d 0r
10d 108d 27r 10r 2r 71r 0d 118d 126d 126d 126d 126r 126d 126r
126r 117r 27r >> ECC OK

What, if anything, is the significance of the letters R and D after each group? Does D indicate Direct and R = repeat?
I have two other DSC decoders, both of which always show each group having 3 characters (OK, I appreciate that 0 is the same as 000 and 27 is the same as 027) but neither decoder includes a letter after the group. Is this just something unique to SeaTTY and if so, why?

I can't see any mention of it in the HELP file
Just curious

Rich

RWrgcd> I can't see any mention of it in the HELP file
RWrgcd> Just curious

DSC transmission has FEC correction.
Each symbol in a message is transmitted twice
(RX and DX position, as I remember).

SeaTTY select symbol to print in such way:

1. If one symbol is valid and another is wrong,
Seatty prints valid symbol (and marks used position by "r" or "d").

2. If both symbol are valid, symbol with better "quality" is selected.

3. If both symbols are invalid, SeaTTY tries to make valid symbol
from two by soft decoder. If rezult is valid, it marks as "c".
If rezult is invalid, SeaTTY prints "??? ".

From: Sergei Podstrigailo
Topic: 5925 Message: 5925

Hello All,

I made some research recently and would know

what new modes you really need in new version of TrueTTY ?

"Really need" means "you glad to pay for it" :-)

Sure would be nice to have CW all in one package with Digi modes.

Also would be nice to have split screen receive for VFO A and VFO B (dual receiver radio). using the stereo jack on the back of the radio as I do when I listen up band in the right ear and DX on the left ear.

BUT CW is priority as in HRD DM780. I prefer Sergei software.

Best Regards
Dan Schaaf

Just run two copies of TrueTTY with different ini-files
(as described in documentation).

Sergei,

I just filed comments with the Federal Communications Commission for higher bitrates on HF transmissions. (ARRL is pushing this) On the off chance our regulation body takes the advice of hams and allows us faster speeds, I would hope they would be in the program.

There are no other "modes" I can think of.

What would please me, (and I would pay for), is if when using TrueTTY, there could be a "log" key which would automatically place the call sign into AALog as a new QSO along with the time(s) of QSO and other data.

I don't get a lot of enjoyment out of TrueTTY because I'm constantly having to jump between the TrueTTY and AALog when I'm working stations.

Hopefully at some point you can have AALog read my Yaesu FT857D via the cat cable to include the Frequency, Mode, Power, as well as do the look-up on the internet of the contact's information. I ran WinEQF for a while it was handy to enter a contact's call sign, and have everything fill in for me from the QRZ database. But the biggest problem is just keeping an accurate log as I'm using TrueTTY. It's darn near impossible to do so while typing on two separate programs in the middle of a QSO.

Fred/W8HDU

Hi Fred!

I don't understand your request. TrueTTY and Aalog do just as you said.
No need to jump between Aalog andTrueTTY.

5932. RE: [dxsoft] What new modes you need in TrueTTY?

Yahoo group: dxsoft
Date: 2016-08-12 21:48:32 UTC
From: Frederick R. Vobbe
Topic: 5925 Message: 5932

Therein lies the problem, John.

Instead of making it simpler and tidy, I’m spending money on more hardware and a more complex solution.

Since both programs reside on the same PC, run at the same time, it would seem there should be a way to pass a variable out of TrueTTY and let AAlog pick it up without hardware, etc.

Once AAlog has the call sign, it should be able to fill in the blanks.

If it’s impractical, low on a priority list, or too difficult to code, I understand. I’ll do it the old way. It’s just that prior to this I had software which did it. However, upgrades post Win7 64 bit made them useless. Oh well.

5934. Recommendation for weather fax software

Yahoo group: dxsoft
Date: 2016-08-13 02:22:46 UTC
From: danmarshall22@...
Topic: 5934 Message: 5934

I want to be able to receive weather faxes on my Single Sideband radio and view them on my laptop while at Sea. I'm preparing for a sail from Panama to Tahiti.

I was able to locate WXSat here http://www.hffax.de/html/hauptteil_wxsat.htm, but it does not appear to run on Windows 10.

Any advice will be appreciated.

Hello

The best way is copy old folder to the new PC. Your AALog will work without problems. Then (if you wish) you can install UPGRADE package.
Please note!
If old PC had Win Vista/7/8/10 and AALog was in the Program Files folder you need to search correct aalog.gdb in your profile folder.
